#### Sources:

- Data and UNCTAD secretariat estimates based on UN DESA Comtrade and IMF Direction of Trade statistics databases

#### Notes:

- (1) The symbol \*\* indicates the grouping to which the country belongs and the percentage share shown applies. The percentage is the share of exports of each commodity shown by the country in the relevant grouping total exports for that commodity (i.e. "developed", which refers to developed economies; "developing", which refers to developing economies; or "Economies in transition", which refers to economies in transition).

#### Sources :

- Données et estimations du secrétariat de la CNUCED sur la base de données Comtrade de ONU DAES et Direction of Trade statistics du Fonds Monétaire international

#### Notes :

- (1) Le symbole \*\* indique le groupement auquel le pays appartient et par rapport auquel est calculé le pourcentage. Ce pourcentage est la part que représentent les exportations du produit par le pays par rapport aux exportations du même produit par le groupement auquel le pays appartient («developed» se réfère aux économies développées, «developing» aux économies en développement et " Economies in transition " aux économies en transition).

**3.2.E Exports structure by product**  
Major exporters for leading products among developing economies

### 3.3 Concentration and structural change indices of product markets Imports

Sources:

- Data and UNCTAD secretariat estimates based on UN DESA Comtrade and IMF Direction of Trade statistics databases

Notes:

(1) Concentration index:

The Herfindahl-Hirschmann index is a measure of the degree of market concentration. It has been normalized to obtain values ranking from 0 to 1 (maximum concentration), according to the following formula:

$$H_i = \frac{\sqrt{\sum_{j=1}^n \left(\frac{x_{ij}}{X_i}\right)^2} - \sqrt{\frac{1}{n}}}{1 - \sqrt{\frac{1}{n}}}$$

where

$H_i$  = value of concentration index for product i

$x_{ij}$  = value of exports or imports for country j and product i

$$X_i = \sum_{j=1}^n x_{ij} \text{ and}$$

n = maximum number of individual economies over the period from 1995 to 2006.

An index value that is close to 1 indicates a very concentrated market. On the contrary, values closer to 0 reflect a more equal distribution of market shares among exporters or importers.

(2) Structural change index:

This index, ranging from 0 to 1 reveals the structural change in trade for a particular product as compared to the reference year (1995 = 0).

An index value close to 1 indicates a significant change in the composition of exporters (importers). On the contrary, values closer to 0 would demonstrate a higher degree of "traditionality" in the markets over the period concerned.

The value is calculated as follows:

$$I_i = \frac{\sum_{j=1}^n |S_{ij}^1 - S_{ij}^0|}{2}$$

where

$I_i$  = Value of structure index for product i

$S_{ij}^0$  = Share of trade of product i for country j in 1995

$S_{ij}^1$  = Share of trade of product i for the country j in the concerned year

### 3.3 Indices de concentration et de changement structurel des marchés de produits Importations

Sources :

- Données et estimations du secrétariat de la CNUCED sur la base de données Comtrade de ONU DAES et Direction of Trade statistics du Fonds Monétaire international

Notes :

(1) Indice de concentration :

L'indice Herfindahl-Hirschmann mesure le degré de concentration des marchés.

Il a été normalisé afin d'obtenir des valeurs comprises entre 0 et 1 (concentration maximale), d'après la formule suivante:

$$H_i = \frac{\sqrt{\sum_{j=1}^n \left(\frac{x_{ij}}{X_i}\right)^2} - \sqrt{\frac{1}{n}}}{1 - \sqrt{\frac{1}{n}}}$$

où

$H_i$  = Valeur de l'indice de concentration pour le produit i

$x_{ij}$  = Valeur des exportations ou des importations du pays j pour le produit i

$$X_i = \sum_{j=1}^n x_{ij} \text{ et}$$

n = nombre maximum d'économies individuelles sur la période allant de 1995 à 2006.

Un indice proche de 1 indique une concentration très forte du marché pour ce produit en particulier. En revanche, une valeur proche de 0 démontre une répartition plus homogène du commerce entre les exportateurs ou les importateurs.

(2) Indice de changement structurel :

Cet indice, dont la valeur est comprise entre 0 et 1, représente les changements de structure du commerce par rapport à une année de référence (1995 = 0).

Une valeur proche de 1 indique un important changement structurel du commerce de ce produit, c'est à dire, une grande variation des parts de marché au sein des exportateurs ou importateurs, par rapport à l'année de référence. Plus la valeur de l'indice est proche de 0, plus la structure du commerce de ce produit est stable.

Il est calculé comme suit :

$$I_i = \frac{\sum_{j=1}^n |S_{ij}^1 - S_{ij}^0|}{2}$$

où

$I_i$  = Valeur de l'indice de changement structurel, pour le produit i

$S_{ij}^0$  = Part du commerce du produit i pour le pays j par rapport au commerce total de ce produit pour l'année 1995

$S_{ij}^1$  = Part du commerce du produit i pour le pays j, par rapport au commerce total de ce produit pour l'année concernée
