Full Liberalization Affords New Opportunities

*Including:* Cost effective and higher quality services (Government and Private Sector).

- Expansion of new and advanced services in all segments of the economy and society – leading to jobs, efficiencies and attractiveness to foreign and local investors.

- Proper allocation and strict administration of the spectrum

- Greater global competitiveness – increased export of high value services.
Jamaica’s Vision of ICT

- Increased numbers employed in technology intensive industries with highly skilled jobs leading to higher per capita income.
- Increased number of persons with Secondary and Post Secondary education (e-learning)
- Provision of world class products and services using ICT.
- Use of ICT to market and popularize the Jamaican brand, with high quality products and services
- Pervasive access by individuals, families and communities to on-line resources and learning opportunities.
- Promotion of e-government and e-governance.
- Strengthening of democratic government by participation and interaction among Jamaicans
- Private sector progressively implementing computer applications for their services operations.
National Information Technology Goals of Jamaica

- Provide its citizens with efficient Government services through the use of IT.
- Establish access to Government services from libraries, post offices, banks, hospitals and other public locations.
- Deliver two types of services - provide information for the public and perform transactions
- Identify and implement a set of government services suitable for electronic self-service
- Expand locations where public can access information and obtain public services.
