Advocating for gender-sensitive trade policymaking in the East African Community
ACKNOWLEDGEMENTS

This advocacy document is the result of a collaboration between UNCTAD’s Trade, Gender and Development Programme and TradeMark East Africa (TMEA) within the UNCTAD-TMEA Cooperation on Trade Facilitation and Trade and Gender Project. The trade and gender component of the project was generously financed by the Kingdom of the Netherlands.

Nurset Aydiner-Avsar prepared the content and the text of the advocacy document. Simonetta Zarrilli, Mariangela Linoci and Chiara Piovani from UNCTAD and Gloria Atuheirwe from TMEA provided comments. Jacqueline Salguero Huaman created the infographics and the design, and Ornella Baldini contributed to the layout. The advocacy document was coordinated and supervised by Simonetta Zarrilli, Chief of the Trade, Gender and Development Programme at UNCTAD. David Einhorn was in charge of English editing.

SUMMARY

This advocacy document puts forth policy recommendations and introduces an implementation framework based on the findings of the report titled “East African Community regional integration: Trade and gender implications” (UNCTAD, 2018). The aim of the advocacy document is to influence gender-sensitive policymaking on trade in the East African Community (EAC). The report presents an analysis of gender and trade in EAC member countries and assesses the impact of regional integration on women’s well-being, with a focus on women’s employment.¹

Agriculture remains the dominant sector of employment in the EAC, especially for women. However, according to the macro analysis, EAC regional integration and overall trade openness have contributed to a shift over time away from agriculture towards services in the sectoral composition of female employment. Among EAC members, Rwanda and the United Republic of Tanzania had the strongest change in the sectoral composition of female employment. However, the shift in employment structure remained weak compared to the stronger shift in the sectoral structure of economic activity. In EAC members, women are also predominantly employed as own-account workers and contributing family workers – the two forms of vulnerable employment – as opposed to men, for whom wage-salary work is relatively more common.

According to the micro analysis, among manufacturing firms, tariff liberalization in export markets for the EAC region led to an increase in women’s employment in production tasks in Kenya, the United Republic of Tanzania, and Uganda, while women production workers in Burundi were negatively affected. Similar effects were observed from tariff liberalization in export markets outside the EAC region, but the impact was much smaller. These employment outcomes for women from trade integration could be explained by technological upgrading induced by trade liberalization, which enables women to have more access to jobs previously dominated by men. It should be highlighted that the positive effects only for production workers might also be indicative of cost-cutting strategies by exporting firms given the significant gender wage gap.

These findings highlight the importance of addressing key dimensions of gender inequalities. Indeed, despite significant progress in adult literacy and primary education, access to secondary and tertiary education continues to be limited, especially for women. Limited access to land and credit also constrains women’s successful participation in the economy, particularly as producers. Despite the introduction of the gender equality requirement into property and inheritance law, there is still a significant gender gap in access to land. Access to formal sources of credit is also limited, more pronouncedly for women. Time poverty is another supply-side constraint that women face while participating in the economy. EAC members did perform well by international comparison in terms of women’s political participation. However, they lag behind with respect to women’s participation in managerial positions in firms.

After providing an overview of the major findings, this advocacy document presents a discussion of major policy recommendations and introduces an implementation framework in the following areas: education, employment, access to resources, unpaid work, decision-making, gender policy, gender mainstreaming in trade policy, and examples from other regions.

¹ South Sudan is not covered in this study because the country has only recently joined the EAC and not enough time has passed to assess the impact of regional integration on women there. Therefore, the terms “EAC partner states,” “member states,” and “EAC countries” used throughout the study refer to Burundi, Kenya, Rwanda, the United Republic of Tanzania, and Uganda.
The treaty that established the East African Community (EAC) was signed on 30 November 1999 and entered into force on 7 July 2000 following its ratification by the three original partner states – Kenya, the United Republic of Tanzania, and Uganda.

Rwanda and Burundi acceded to the EAC Treaty on 18 June 2007, and became full members of the community on 1 July 2007.

The EAC Customs Union protocol was signed in March 2004 to establish a common external tariff on imports from third countries and to gradually eliminate internal tariffs. The protocol became effective in January 2005, and the gradual process of establishing a Customs Union was completed in January 2010.

The EAC Common Market protocol was signed in November 2009 and came into effect in July 2010. It aims to further the free movement of goods, services, labour, and capital.

The EAC Monetary Union protocol was signed in November 2013.

South Sudan acceded to the treaty on 15 April 2016 and became a full member on 15 August 2016.

The process towards an East African Federation is currently being fast-tracked, with the aim of building a sustainable and powerful economic and political bloc in East Africa.

Source: Compiled by the UNCTAD secretariat from various sources.
Different dimensions of regional integration in EAC member countries

In terms of overall regional integration, Kenya and Uganda, followed by Rwanda, performed relatively better, while Burundi and the United Republic of Tanzania lagged behind.

Source: UNECA (2016).
Note: UNECA's Regional Integration Index consists of five dimensions. The closer the index score is to 1, the higher the level of integration in this dimension.

Key Facts

- According to the Regional Integration Index of the United Nations Economic Commission for Africa (UNECA), the EAC ranks as the top-performing community in the region.
- With respect to trade integration and productive integration, Kenya and Uganda perform significantly better than the United Republic of Tanzania, Rwanda, and Burundi.
- Kenya and Rwanda are the top performers in terms of free movement of people, closely followed by Uganda and Burundi, while the United Republic of Tanzania scores the lowest.
- Regional infrastructure is the single area in which Burundi scores well above the other partner countries.
- Rwanda is the only member that has achieved some degree of financial and macroeconomic integration, followed by Kenya.
Socioeconomic profiles of EAC member countries

Note: GDP and GDP per capita figures are measured in current US$. GDP and population figures are for 2016. The Gini index is a measure of inequality derived from the Lorenz curve. The closer the index number is to 100, the higher the degree of inequality. The poverty ratio refers to the headcount ratio, which is equal to the percentage share of the population living below the poverty line. The Human Development Index (HDI) is a composite measure of development that is composed of the health, knowledge, and living standards dimensions. The Gender Inequality Index (GII) measures gender inequalities in the areas of reproductive health, empowerment, and economic status.
Socioeconomic profiles of EAC member countries

Services, and to a lesser extent, industry, expanded rapidly from the mid-1990s to the mid-2000s, with services surpassing agriculture’s dominant role in economic activity.

Note: The figures show the share of value added by each sector to a country’s GDP. They may not necessarily add up to a hundred due to rounding. SSA: sub-Saharan Africa.

• Sustained growth in real per capita GDP led to significant declines in poverty rates. However, income inequality remained high in EAC member countries.
• Kenya and the United Republic of Tanzania had the highest Human Development Index (HDI) values, while Burundi and Rwanda showed the biggest improvements on the index from 2000 to 2015, mainly driven by gains in educational outcomes.
• EAC members performed better on the Gender Inequality Index (GII) than on the HDI. Rwanda had the least gender inequality among EAC members, followed by Burundi, Uganda, the United Republic of Tanzania, and Kenya.
• The two largest economies of the EAC, Kenya and the United Republic of Tanzania, also have the largest gender inequality in the region. Hence, gender equality is not a natural outcome of the development process. There is a need to proactively promote gender equality policies and to allocate resources for gender equality to close the gaps.
• The economies of EAC members are more agriculture-oriented and less services-oriented than the average for the economies of sub-Saharan Africa (SSA).
EAC merchandise exports mainly shifted towards developing economies in Asia (with China and India being the biggest recipients) and sub-Saharan Africa (SSA), replacing the dominance of traditional European Union export markets.

Similarly, the share of Asian imports in EAC merchandise imports has significantly increased over time, while merchandise imports from other regions have lost their share in EAC markets.

Although there was weak growth of intra-EAC trade during the regional integration process, the composition of that trade exhibited a technological upgrading towards low- and medium-technology manufactures.

Primary products continue to dominate the EAC’s exports to the European Union and Asia, while there is an influx of higher-value-added import products into the EAC markets from those regions.

Trade flows in the EAC and SSA (per cent of GDP)

EAC exports have expanded over time, particularly in the early 2000s. Imports grew faster than exports. As a result, the trade deficit grew well above the SSA average.

Trade developments in the EAC region

Sectoral composition of EAC trade

EAC merchandise exports are dominated by primary products and, to a lesser extent, resource-based manufactures. EAC merchandise imports are dominated by resource-based and medium-technology manufactures.

Geographic composition of EAC trade

Although intra-EAC merchandise trade expanded in volume, the relative role of intra-regional trade remained weak, with trade increasingly dominated by trading partners outside the EAC.
Education and skill development are critical for people to obtain higher-level job positions as wage workers, and for producers and entrepreneurs to access the business information and technological skills they need.

- **KEY FACTS**
  - Adult literacy rates have significantly increased over time, and gender parity in literacy (0.90 on average in 2015) has increased to levels well above the sub-Saharan Africa (SSA) average of 0.77.
  - EAC members significantly improved educational enrolment at all levels and all of the countries achieved full gender parity in gross enrolment rates for primary education.
  - The gross enrolment rate for secondary education remains low—and below the SSA average—for all EAC member countries except Kenya. For women, it ranges between 25 per cent in Uganda and 65 per cent in Kenya.
  - Accessing university education continues to be a privilege in SSA and East Africa. The gender gap in tertiary enrolment is larger than the one for primary and secondary education and is particularly high in Burundi and the United Republic of Tanzania.

*Source: World Bank, World Development Indicators database (accessed in May 2017).*

*Note: The Gender Parity Index is equal to the ratio of female to male enrolment rate at each education level. Gross enrolment rate figures for primary education are for 2014 in all countries. Gross enrolment rate figures for secondary education are for 2014 in Burundi, Rwanda, and sub-Saharan Africa (SSA), 2012 in Kenya, and 2013 in Tanzania. Gross enrolment rate figures for tertiary education are for 2014 in Burundi, Rwanda and the United Republic of Tanzania, 2009 in Kenya, and 2011 in Uganda.*

Note: Sectoral employment figures are for 2012 in Rwanda, for 2014 in the United Republic of Tanzania, and for 2013 in Uganda. Sectoral employment figures are International Labour Organization estimates for 2015 for Burundi and Kenya.

### KEY FACTS

- The sectoral distribution of economic activity has shifted over time away from agriculture towards services in EAC member countries, and services has become the main sector of the economies.
- The structural change in economic activity was not accompanied by an equally strong shift in the employment structure, and agriculture continues to be the main employment sector in the EAC.
- The sectoral shift of labour was particularly weak for women: 96 per cent of women in Burundi, 76 per cent in Kenya, 84 per cent in Rwanda, 71 per cent in the United Republic of Tanzania, and 77 per cent in Uganda are still employed in agriculture.
- Women’s employment in services mainly increased in low-skilled services such as trade and tourism, while men accessed more positions in higher-skilled services such as transport and communication.
Gender profiles of EAC member countries

**Employment by work status**

**Key Facts**

- Women are predominantly employed as own-account workers and contributing family workers, the two forms of vulnerable employment: 97 per cent of women in Burundi, 73 per cent in Kenya, 84 per cent in Rwanda, 80 per cent in the United Republic of Tanzania, and 83 per cent in Uganda are employed as own-account or contributing family workers.

- Although vulnerable employment is also common among men, men hold a significantly higher share of wage-salary employment than women.

- Women are more likely than men to be in informal employment, and they account for a relatively higher share of overall informal employment.

- Women lag behind men to different degrees in terms of wages in various sectors of the economy.

Note: The figures for employment by work status are for 2012 in Rwanda and Uganda, and for 2013 in the United Republic of Tanzania. Employment by work status figures are International Labour Organization estimates for 2015 for Burundi and Kenya.
Gender profiles of EAC member countries

Land ownership

Land is a key asset for rural women’s livelihoods given the dominance of agriculture in female employment in the EAC. Land can be used for subsistence farming, cash crop farming, and as collateral for borrowing.

**Land ownership rate in EAC members**

Note: Land ownership figures are for 2010 in Burundi, 2014 in Kenya, 2015 in Rwanda, and 2011 in Uganda. Land covers both agricultural and residential areas. The rates for women are defined for the 15-49 year-old age group.

**Key Facts**

- A lower share of women tends to be landowners in the EAC. Only 51 per cent of women in Burundi, 35 per cent in Kenya and Uganda, and 46 per cent in Rwanda are landowners.
- The gender gap in landownership is particularly high in Uganda.
- Sole ownership is more common among men, while women tend to be joint owners.
Credit access and usage

Access to credit is a key issue for women farmers and business owners in starting or expanding their farm or business, as they often possess fewer resources and assets than men.

<td>13.6%</td>
<td>23.4%</td>
</tr>
</tbody>
</table>

Note: Credit figures are for 2014 in all countries and refer to shares in the population of men and women ages 15 and older.

**KEY FACTS**

- In EAC member countries, family or friends continue to be the most widespread source of borrowing as a key informal channel of credit for both men and women.
- Borrowing from a financial institution is limited in the EAC region. In Kenya and Uganda, around 18 per cent of men borrowed from a financial institution while only about 14 per cent of women did so.
- Among EAC members, borrowing for investment purposes is more common in Kenya, Uganda, and the United Republic of Tanzania. However, a lower share of women borrows to start, operate, or expand a farm or business, particularly in Kenya and the United Republic of Tanzania.
Women’s unpaid care and domestic work burden limits the number of hours they can devote to productive on-farm and off-farm activities, constrains their mobility, and limits their access to market resources and information as compared to men.

**KEY FACTS**

- Women shoulder a higher share of unpaid care work than men, in line with the traditional gender division of labour.
- Women spend 3, 3.5, and 1.2 times more minutes per day on unpaid care and domestic work than men in Rwanda, the United Republic of Tanzania and Uganda, respectively.
- As a reflection of the unequal division of unpaid work, women tend to work less in paid work than men.

Source: UN Women (2016).
Note: Time-use figures are for 2006 in the United Republic of Tanzania, 2010 in Uganda, and 2011 in Rwanda.
Gender profiles of EAC member countries

Participation in decision-making processes

Proportion of seats held by women in national parliaments

- Burundi: 36%
- Kenya: 20%
- Rwanda: 64%
- United Rep. of Tanzania: 36%
- Uganda: 35%
- Sub-Saharan Africa: 24%

Proportion of women in ministerial-level positions

- Burundi: 35%
- Kenya: 30%
- Rwanda: 36%
- United Rep. of Tanzania: 32%
- Uganda: 30%
- Sub-Saharan Africa: 20%

Firms with female top manager

- Burundi: 16%
- Kenya: 13%
- Rwanda: 20%
- United Rep. of Tanzania: 14%
- Uganda: 15%
- Sub-Saharan Africa: 16%

Note: Data for firms with female top manager are for 2016 in SSA, for 2011 in Rwanda, for 2014 in Burundi, and for 2013 for the rest of the countries. Political participation indicators are for 2015 for all countries. SSA: sub-Saharan Africa.

**KEY FACTS**

- EAC partner states have performed well above the sub-Saharan Africa (SSA) average in terms of the participation of women in the parliament and ministries. While 38 per cent of the seats in the national parliament and 32 per cent of ministerial-level positions were held by women on average in the EAC, the same averages were 24 per cent and 20 per cent for SSA.
- Rwanda is a particularly outstanding case, becoming the first country in history to have a higher share of women in the parliament than men in 2008. In 2015, 64 per cent of the seats were held by women.
- Women’s participation rate in top managerial positions in firms in the EAC is equal to the SSA average of 16 per cent. Hence, women’s achievements in firm management are less pronounced than those in political life.
Gender-related inputs in the context of EAC regional integration

**International and regional setting**

- The East African Legislative Assembly (EALA) passed the EAC Gender Equality and Development Bill on 8 March 2017 with the aim of consolidating the various instruments on gender equality into one legally binding document.
- Article 5 of the EAC Treaty states that the EAC shall ensure the mainstreaming of gender in all endeavours of the community; Articles 121 and 122 of the treaty refer to the role of women in socioeconomic development and business, and both articles highlight the need for developing policies and programmes to promote gender equality.

**National setting**

- All EAC members recognize non-discrimination and gender equality in their constitutions.
- All EAC members have ministries working on gender equality issues, and recognize gender issues in their National Development Strategies.
- All EAC members recognize equal ownership rights to property between men and women.
- There is a significant gender gap in inheritance laws in all EAC member countries except Rwanda.
- There are quotas for women representatives in the parliaments of all five EAC member states; however, there are no quotas for women on corporate boards or candidate lists in elections.
- The law mandates equal remuneration for work of equal value in Kenya, the United Republic of Tanzania, and Uganda.
- The law mandates non-discrimination based on gender in hiring only in Burundi and the United Republic of Tanzania.
- Traditional patriarchal attitudes that are dominant, particularly in rural areas, continue to be an obstacle to achieving gender equality despite the commitments made by governments.

**Trade policy**

- All EAC member countries except Burundi have national trade policies.
- Kenya (2017), Rwanda (2010), and the United Republic of Tanzania (2003) make reference to gender in their national trade policy documents, while Uganda’s national trade policy document (2007) does not. However, Uganda’s national export strategy includes gender considerations.
- Country-level programmes and associations were initiated to support women’s participation in EAC economies under trade reforms. Major examples include Burundi’s Association of Women in Business, Kenya’s Women Enterprise Fund, Rwanda’s Chamber of Women Entrepreneurs, the United Republic of Tanzania’s Women Entrepreneurship Development Programme, and Uganda’s Women’s Entrepreneurship Programme.
- The main challenge for all the EAC members is to increase the reach of these targeted programmes by increasing their funding and monitoring their effective implementation.

Source: Compiled by the UNCTAD secretariat based on various sources.
Gender employment effects of trade integration in EAC member countries

**Tariff liberalization in EAC export markets**
- Led to an increase in the share of female workers overall in manufacturing firms in Kenya, the United Republic of Tanzania, and Uganda.
- Led to a decline in the share of female workers overall in manufacturing firms in Burundi.
- The impact of the EAC Customs Union on women’s employment was positive for production workers in Kenya, the United Republic of Tanzania and Uganda, but negative for production workers in Burundi.
- Women in non-production jobs did not experience an employment boost as a result of trade liberalization policies.

**Tariff liberalization in non-EAC export markets**
- Had an overall positive impact on women’s employment in EAC member countries, though the impact was much smaller than the one from intra-EAC regional integration.
- Similar to the case of intra-EAC tariff liberalization, this effect was realized only for production workers.
- In terms of the destination of exports outside the EAC region, only tariff liberalization in European Union and Asia Pacific export markets had a positive but small effect on women’s employment in production jobs overall in EAC members.

**Other factors**
- A firm’s orientation towards exports led to an overall increase in women’s employment in production jobs in manufacturing firms in EAC member countries.
- International certification had a positive impact on women’s employment overall in EAC members.
- Tariff liberalization on imports from the rest of the world had a negative effect on women’s employment in production jobs, even though the opposite effect would be expected given the increase in the overall tariff rate applied by EAC members to imports from the rest of the world during this period.

Source: UNCTAD estimates using data obtained from the World Bank’s Enterprise Surveys and World Integrated Trade Solution database. Note: The case of Rwanda could not be analysed due to data constraints.
Policy recommendations to support women during the process of EAC regional integration

**Policy framework**

**EDUCATION**
- Secondary and higher education
- Vocational training programs

**EMPLOYMENT**
- Joint public-private sector education initiatives
- Incentive programs for firms
- Labour market policies

**OTHER REGIONS**
- Use of the European Union’s gender policy framework as an example
- Regional funds as a leverage effect
- Collection of gender-disaggregated data
- Sharing of good practices

**ACCESS TO RESOURCES**
- Programmes to transform customs/traditions related to women’s land ownership
- Targeted credit initiatives

**UNPAID WORK**
- Affordable childcare facilities
- Awareness programs

**GENDER MAINSTREAMING IN TRADE POLICY**
- Gender chapters in free trade agreements
- Enhancement of capacity-building initiatives
- Gender-sensitive value-chain analyses
- Ex-ante gender impact assessment of trade reforms

**GENDER POLICY**
- Long-term advocacy campaigns
- Participation of women in trade policy
- Gender-sensitive implementation of the United Nations Sustainable Development Goals

**DECISION-MAKING**
- Initiatives to increase women’s participation in managerial positions
- Education policies to upgrade women’s skills
Policy recommendations to support women during the process of EAC regional integration

**Education**
- EAC members need to take further steps to facilitate the access of primary school graduates to secondary and tertiary education and to close the gender gap in secondary and tertiary education.
- Vocational training programmes and joint public/private sector educational initiatives such as on-the-job training and skill development programmes for women need to be expanded in higher-value-added sectors.

**Employment**
- Targeted input subsidies, technological investments, and extension and advisory services could be used to support the shift of female farmers in agriculture towards higher-value-added sectors.
- Enforcing protection against gender-based discrimination is essential to incentivise both vertical and horizontal mobility, in turn promoting women's participation in expanding sectors.
- Training programmes and employment offices could help facilitate women's access to wage/salary employment.
- Incentive programmes need to be implemented to encourage more domestic manufacturing firms in EAC members to open up to international markets.
- There is a need for accompanying measures such as training programmes to help women benefit from trade-related employment opportunities.
- By developing or continuing programmes that help firms achieve international certification, countries can create another channel to boost female employment in the manufacturing sector in EAC member countries.

**Access to resources**
- Capacity-building programmes are needed to achieve gender-equitable land tenure governance and to transform customs that constrain women's access to land.
- Country-level credit initiatives may need to be reconceived in order to ease barriers to credit and close the gap in access to credit.
- A regional credit mechanism could be put in place to support women entrepreneurship uniformly across EAC member countries, given that the implementation of country-level initiatives to support women entrepreneurs is neither sufficient nor uniform.

**Unpaid care and domestic work burden**
- Policymakers need to take women's unpaid work burden into consideration by introducing policy instruments such as affordable childcare facilities and education programmes directed towards transforming the established gender division of labour in the society.
Policy recommendations to support women during the process of EAC regional integration

**Decision-making**
- Further efforts are needed to increase women’s participation in managerial positions in firms. Targeted policy initiatives such as launching online talent pools of women for managerial positions, as in the case of the European Union, could prove to be effective.

**Gender policy at the national and regional level**
- Stereotypes and social rules still very much embedded in most cultures and societies may inhibit full implementation of institutions and legal frameworks to promote gender equality. The EAC Gender Equality and Development Bill can provide the opportunity to develop a region-wide approach to efficiently promoting long-term advocacy campaigns across the EAC member countries.
- Women’s participation in trade policy processes needs to be enhanced.
- Implementation of the United Nations Sustainable Development Goals could be made gender-sensitive, and not only with reference to the gender equality goal (SDG 5). The EAC could play a guiding role in this regard.

**Gender mainstreaming in trade policy**
- When negotiating new trade agreements at the national or regional levels and in possible future amendments to the EAC treaty and its protocols, EAC member countries may wish to consider the recent free trade agreements between Chile and Uruguay and between Canada and Chile as a new approach to mainstreaming gender in trade policy.
- EAC partner states may wish to carry out ex-ante gender impact assessments of the trade reforms they plan to implement at the national or regional levels. Such assessments would give them an indication of the likely impact of trade reforms on women and, in the event of foreseen negative effects, provide an opportunity to put compensatory measures in place.
- Trade-focused capacity-building programmes to strengthen women’s access to credit, entrepreneurship, and skill development need to be developed further to increase their reach and efficiency.
- Gender-sensitive value-chain analyses need to be conducted in key export sectors across all EAC members in order to develop more specific measures that incentivise the participation of women in higher-value-added export sectors.

**Learning from gender mainstreaming in other regions**
- The European Union’s gender policy framework provides a positive example of gender mainstreaming at the regional level for the EAC.
- Regional funds could be introduced as a leverage effect to help close the gaps in funding across the EAC members, as in the case of the European Union.
- Uniform and improved collection of gender-disaggregated data should be institutionalized throughout the EAC region.
- The EAC should build platforms to exchange good practices and peer learning among member countries and undertake an annual review of key actions carried out by members towards implementing the goals of the EAC Gender Equality and Development Bill.
## Policy recommendations in practice: Implementation and monitoring
