WOMEN E

Outline of Presentation

- Key Message for UN Women Executive Director;
- •Why advocate for Gender Equality and Women's Empowerment in Extractive Industries?
- Factors affecting Gender Equality and Women's Empowerment in Extractive Industries?
- Proving impact and enhancing opportunities for women and girls in EI value chains
- Confronting gender related huddles in El
- UN Women as a key player in advocating for GEWE in El
- Success studies from case studies
- Way forward and Conclusion

Gender Equality in the Extractive Industries: Key Message from UN Women Executive Director

"The extractive industries have the potential to drive immense economic and social development. However, it is vital that we consider how everyone is affected: women and men, and whole mining communities. If extractive projects are not inclusive and sustainable — including employment practices that are gendersensitive, and community investments that impact positively on gender equality and women's empowerment — there are real risks to social stability, inclusive growth and development, and even security."

UN Women Executive Director
Phumzile Mlambo-Ngcuka

Why Gender Equality and the empowerment of women in El

Discovery of large-scale discovery of minerals and metals in Africa; El main drive of most economies--but not often translated into jobs or household wealth;

El have the potential to step up women's economic empowerment if transparent, fair and equitable

Multiplier effects of women's economic empowerment on other development gains like nutrition, health, education, sanitation, improved livelihoods; WEE=Smart Econs and pathway to GEWE

Basic right of all members of related communities to participate and benefit from its resources; Engendering the El responds to rights norms and principles;

Gender bias in EI sector, if unaddressed, could further widen the gender gaps in access to resources and resource-related opportunities

Significance of integrating gender related realities, needs, interests, expectations, potentials.

The commitment to 'leave no one behind' is central to the SDGs processes and outcomes: "No goal should be met

Factors affecting GEWE in Extractive Industries: Naming and confronting the huddles

- •Low participation of women in decision-making as managers in EI about 10%; In ministries-abt 20% often low scale jobs; As work-force??
- •Political will and capacity-lack of legal frameworks, policies and programmes that consider their needs and protect their rights
- Insufficient data to inform gender responsive policies and action-laws and policies gender neutral;
- •Background education-science and technology-Understanding of the specificities, technicalities and politics of the sector;
- •Gender stereotypes; Embedded socio-cultural norms, beliefs and practices on land and property ownership-Who gets compensated for land? Who gets employed, for what work and what pay? Who bears the burden of family care? Whose burden of work increases in the process?
- •Disproportionate power relations between the genders in households and communities to public arenas, lack of a political voice;
- Limited capacity to take advantage of productive opportunities Unfair competition; Investment=Finance, mechanization, Therefore need for deliberate policies and laws to support women, youths and
- •Health and other social vulnerability-VAWG, HIV, Prostitution; Burden of Care, work load and lack of social protection
- Limited access to and control of economic resources, etc;

Possible policy and Operational actions to enhance opportunities for Women in El-Pressure Points.

- •Policies and legal frameworks: -Currently little integration of gender issues into regional and national policies and regulatory frameworks; Need for policies that address the social, cultural, economic and political barriers, as well as the opportunities for women and young girls in the EI sector,
- •Oil, gas and mineral value chains have important opportunities for women's empowerment; Policies should underline this and emphasize job creation; Decent jobs, Equal pay for work of equal value in EI!!.
- •Africa women make up between 40% and more of the workforce in <u>artisanal</u> and <u>small-scale mining (ASM)</u> operations;
- •Recognize women value addition and provide support along the chain of exploration, contracting and licensing, operations and extraction, value addition, tax and royalty collection, and revenue distribution and management,
- •Generate data from gender impact assessments -Use it for gender responsive evidence driven policies, laws and investments in EI;
- Education and Training for required skills and technical know-how

Possible policy and Operational actions to enhance opportunities for Women in El-Pressure Points

- Promote practice of corporate social responsibility-Engage the Global Compact Women Empowerment Principles;
- •Make Financing mechanisms inclusive and investment in gender responsive infrastructure;
- •Promote transparency and equity in the sector to manage environmental degradation, economic disturbance, population displacement, income inequality, poverty and instability;
- Review existing social norms on gender relations and social issues emerging around EI;
- •Address discriminatory employment practices and increase access to capacity building;
- Engaging women in community consultations and decision-making positions,

With these women will be better equipped to actively participate in and exploit the economic potential within the various El value chains

Efforts Towards Gender responsive El in Africa

Current and potential gender-responsive actions in the extractive industries in Africa

- The African Union's Africa Mining Vision (2009)
- •The African Commission on Human and People's Rights, which adopted a resolution on the need for a human rights-based approach to natural resource governance
- The Southern African Development Community Protocol on Mining (1997)
- •The assessment methodology for member countries of the African Peer Review Mechanism, which was recently reviewed to include a comprehensive section on extractive industries
- The creation of women's mining and advocacy bodies
- Private sector and non-governmental organizations have begun to develop tools and guidelines

UN Women as Key Player in GEWE in Extractives Industries

UN Women, through its ground-breaking work is becoming a reference entity for issues relating to Gender Equality in the Extractive Industries in Africa

UN Women's past and ongoing work:

- •Knowledge Management-Information gathering and mapping of Gender and EI work in the region for analysis and to identify relevant stakeholders; this resulted in UN Women's Roadmap to Gender Equality in EI.
- •Research and evidence-based Policy Dialogue and Advocacy collaborations; including UNECA and Private Sector
- •Technical and Advisory support, connection to key partners and sharing of Knowledge products: Guidelines for how to engage in policy and advocacy in EI; Policy Brief on Gender in EI, Extracting Equality Guide
- •Capacity building: Development of Gender Equality in EI leadership training and working with women groups to raise awareness of and claim their rights.
- •Strategic Partnerships Regional partnership with Publish What You Pay (PWYP) to integrate gender in to their work in transparency and accountability in EI e.g. Extracting Equality Guide. Links between PWYP partners and UN Women at country level.
- •Working with regional bodies to <u>support the integration of gender in to El-related work</u>; including **AU's Technical Working Group on the Africa Mining Vision**; **AU's Department of Trade and Industry**; **UNECA's Africa Centre for Gender**; **Information sharing and awareness creation**:
- Regional Knowledge Sharefair on Gender Equality in the El Sector; UN Women's unique access to women's networks and experts will inform the integration of gender perspectives into regulatory El frameworks and El-related initiatives; *Invest in community capital and strengthen the capacities of women's organizations;*
- •Gender integration into the private sector value chain

Examples of some supported Regional Initiatives

- UN Women ESARO has developed a road map for UN Women's regional and countrylevel engagement within the EI sector in the Eastern and Southern Africa region; also, a knowledge group on gender equality in the extractive industries has been established
- It is engaging with the African Union and the Africa Mining Development Centre on possibilities for collaboration to ensure that the Africa Mining Vision's (2009) Action Plan is gender responsive
- UN Women ESARO is working with United Nations Economic Commission for Africa (UNECA) on regional research collaboration on the impacts of the EI sector on women.
- Engagement with private sector actors in the industry is being pursued in order to firmly establish what the existing activities, best practices and gaps are in mainstreaming gender in private sector activities this will inform strategic entry points for UN Women's engagement.
- Going forward, UN Women ESARO will partner with others to address gender-related programmatic and policy gaps in EI within both the economic and government/leadership realms.

UN Women's country-level extractive industry initiatives in Eastern and Southern Africa.

- •UN Women Malawi has drafted an extractives strategy and held preliminary meetings with the Principal Secretary of Mines and Women in Mining to promote women's entrepreneurship in artisanal and small-scale mining in Malawi.
- •UN Women Mozambique is conducting research with the Cabo Delgado provincial department of the national women's machinery on the social impacts of the El sector on women.
- •UN Women Tanzania has contributed to the integration of gender equality into the development of CSR policies and guidelines for the EI sector. A comprehensive mapping of the barriers and opportunities for women's engagement in the EI sector is forthcoming.
- •UN Women Zimbabwe has worked with civil society organizations to provide policy recommendations on the creation of legal and policy environments that are conducive to women's enhanced participation in mining in Zimbabwe.

UN Women in Sudan

2015 Annual work-plan focus on women economic empowerment: Climate resilient agriculture; IGA; Business development skills;

Also on women, peace and security, including community peace building efforts;

Our office is available to work with government to engender the El sector-thru research, policy dialogue, capacity dev't, etc.

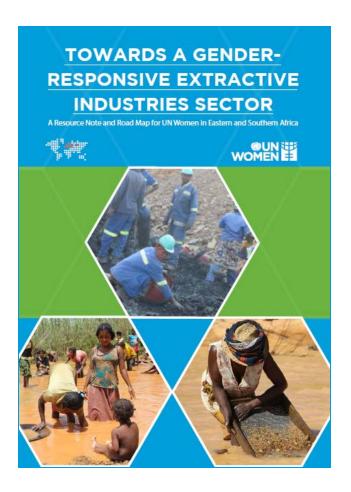

Final Word: MIND THE GEWE GAP IN EXTRACTIVES IF WE MUST ACHIEVE SDGS LEAVING NO ONE BEHIND!!!

- Extractives operate in communities made up of women/men, girls/boy;
- •Gender power relations in ownership, management and control of natural resources are often imbalance in disfavor of women;
- •Extractive industries should be mindful not to widen the gap, perpetuate the imbalance or great new streams of gender inequalities;
- •Most importantly, EI can bridge existing gender gaps in respective communities if they make deliberate efforts, thru policy decisions to ensure women and men decide, participate and benefit equally; SO
- •El must therefore mind the gender equality gap to ensure extractives drive our economies with women and men on board!
- •Partnerships between the public and private sectors, UN and development partners, CSOs and communities are key in this effort;
- •UN Women is contributing and will continue to promote efforts for women and men to participate and benefit equally in the EI

•THANK YOU!

The recent large-scale discovery of valuable extractive resources -oil, gas and minerals - in Eastern and Southern Africa presents great potential for shared economic growth and could drastically reduce poverty levels in these countries. However, if the extractive industry (EI) sector is not managed in a transparent and equitable manner, there are risks of severe negative consequences, including environmental degradation, economic disturbance, population displacement, and accelerated levels of inequality and

Saltent evidence suggests a gender bias in the distribution of the risks, costs and benefits within the El sector that, if unaddressed, could further widen the gender gaps in ac-

Indeed, it appears that men mostly benefit from EI, while women bear most of the costs, such as family or social disruption and environmental degradation which leads to the loss of employment and income in agriculture. Furthermore, women face disproportionate risks in their engagements with EI operations and the communities that surround them: harassment, gender-based violence, HIV, and extreme levels of violence in resource-based con- and education indices". This indicates that in resource-rich flicts! These gender disparities have been accentuated by the absence of strong political and economic institutions that could integrate gender issues into the El sector.

in view of the rapid evolution of the EI sector in Africa, this policy brief highlights the urgent need for integrating gender dimensions into the El sector on the continent, to ensure that resource-led development is transparent and the benefits from the sector are equitably shared.

EXTRACTIVE INDUSTRIES IN AFRICA

Largely driven by the extractive industries, gross domestic product (GDP) growth within certain African economies continues to rank among the world's highest; the continent possesses to percent of the world's oil reserves, 40 percent of its gold ore, and no less than 95 percent of platinum group metals. Extractive resources account for almost one quarter of Africa's GDP1 (see Box 1).

Africa's resource wealth, however, has also been associated with "poverty, conflict and corruption", as resources have not always translated into higher levels of household income Several countries in sub-Saharan Africa have gained substantial wealth from their resources, but more efforts are required to address the contribution of this wealth to inclusive growth, equitable poverty reduction and gender equality.

For example, in sub-Saharan Africa, when comparing the development indices of resource-rich countries and those with limited resources, the resource-rich countries rank comparatively higher on the income index; yet the countries with few resources have higher scores on human development sub-Saharan African countries, income is not being translated into equitable growth. It is vital that advocacy and capacity development work in resource-rich developing countries focuses not only on issues of transparency, progressive taxation and equitable distribution of resource wealth, but also on the full integration of gender perspectives into these activities through, for example, the appropriate allocation of resources and tax income to women's empowerment programmes and
