24/9/2014

July 14 Reports from Macauley Street Satellite Hospital in Freetown, say they recently confirmed that a suspected Ebola who was admitted at the facility has escaped. Sources at the Macauley Street Satellite Hospital claim that a nurse known as Basiru from Daru arrived at the hospital claiming he had come to Freetown to sit to a public examination last week Saturday. However, by Monday this week... [read more](#)

EBOLA IN LIBERIA

August 10, 2014

In March of this year, public health organizations in Guinea detected a previously unknown outbreak of the dangerous Ebola virus. Ebola is transmitted through blood or bodily fluids and is notable for its high mortality rate – between 50 and 90%. Since first identified, the outbreak has spread to Liberia, Sierra Leone, and Nigeria -- assisted by the widespread limited access to clean water and sanitation. By the latest estimates, there have been 1779 suspected cases of Ebola in West Africa, resulting in 961 confirmed deaths. As cases mount, government and non-governmental organizations from around the world are mounting a major campaign to help victims and stop the spread of the virus.

The **Liberia Early-Warning and Response Network**, LERN (<http://lern.usahidi.com/>) was created by a coalition of civil society, government, and international agencies using the Ushahidi Platform. LERN acts as a system for identifying issues and strengthening responses. By combining Ebola-relevant reports submitted to LERN (downloaded through CrisisNET API) with CDC data, rapid visualization of the outbreak in Liberia is possible.

If you wish to help fight the Ebola outbreak in West Africa, consider donating to organizations like Médecins Sans Frontières (<http://www.doctorswithoutborders.org>) or Samaritan's Purse (<http://www.samaritanspurse.org/>).

 Areas with confirmed or probable cases of Ebola (as of Aug 7, 2014)
