Oceans Economy and Trade Strategies (OETS):
An implementation tool for SDG 14

Belmopan, Belize, 8 May 2018

David Vivas Eugui, Legal Officer
Trade, Environment, Climate Change and Sustainable Development Branch, DITC UNCTAD
Setting the course

Part I: OETS

1. Sustainable Development Goals and UNCTAD's mandate
2. What is the oceans economy and how much is it worth?
3. UNCTAD classification of ocean-based sectors
4. UNCTAD's Interventions
5. DOALOS's role within the UN system
6. UNCTAD's Oceans Economy and Trade Strategies
   • Objectives, expected achievements, and beneficiaries
   • Project process diagrammed flow
7. UNCTAD's Oceans Economy pillars
8. Objectives of the field mission
9. Belize pre-selected sectors

Part II: Global trends in selected sectors

1. Global trends in fish stocks and trade in fish products
2. Trends in Marine and Costal Tourism
PART I: OETS
SDG 14: Conserve and sustainably use the oceans, seas and marine resources

By 2020, effectively regulate harvesting and end overfishing, illegal, unreported and unregulated (IUU) fishing and destructive fishing practices, in order to restore fish stocks in the shortest time feasible, at least to levels that can produce maximum sustainable yield as determined by their biological characteristics.

By 2020, prohibit certain forms of fisheries subsidies which contribute to overcapacity and overfishing, eliminate subsidies that contribute to IUU fishing and refrain from introducing new such subsidies, recognizing that appropriate and effective special and differential treatment for developing and least developed countries should be an integral part of the WTO fisheries subsidies negotiation.

By 2030, increase the economic benefits to SIDS and LDCs from the sustainable use of marine resources, including through sustainable management of fisheries, aquaculture and tourism.

Provide access for small-scale artisanal fishers to marine resources and markets.

Enhance the conservation and sustainable use of oceans and their resources by implementing international law as reflected in UNCLOS (…).
UNCTAD's mandate on SDG 14

• Nairobi Maafikiano (Consensus) Para 100 (t)

• In cooperation with other relevant international organizations and other stakeholders, UNCTAD should support developing countries, in particular SIDS, in the advancement of Sustainable Development Goal 14 in the design and implementation of regional and/or national economic development strategies for the conservation and sustainable use of oceans and their resources seeking to promote sustainable trade in ocean-based sectors...

• ...including through analysis of fisheries subsidies that lead to overcapacity and overfishing and subsidies that contribute to illegal, unreported and unregulated fishing and the challenges they pose to developing countries, particularly in connection with the conservation of marine resources and food security
What is the Oceans Economy and how much is it worth?

✓ Promote economic growth key oceans based sectors under a sustainable marine ecosystems approach
✓ Seeks sustainable access and use of living and non-living resources
✓ Subject to a multilayer jurisdictional and multi agency
✓ Incorporates the maintenance of the livelihoods of coastal populations
✓ Incorporates low carbon activities but also seeks to address climate change impacts
✓ Highly important for countries with High EEZ / land territory ratio. (e.g. the Belize has a land territory of 22'966 km² and an EEZ of about 35'351 km, a 1/1.5 ratio lt/eez)
Overview of industry-specific value-added in 2010 and 2030

Source: OECD (2016) The Ocean Economy to 2030

- Oceans based sector **will double** in sizes by 2030
- Demand and growth are been driven by population growth, limits in land territories and resources, and technological change.
Marine Resources

- Living Resources
  - Fish
  - Coral
- Genetic Resources
- Non-living Resources
  - Oil & Gas
  - Other energy sources
  - Sand & Gravel
  - Other conventional minerals
  - Newly discovered minerals
  - Water
Uses of the oceans

- Construction: Offshore Installations, Terminals etc.
- Transportation: Shipping, Pipelines
- Communication: Cables
- Trade
- Recreation: Tourism
- Waste Disposal
- Other Services: Research, Education, Defence etc.
Oceans’ services

Provisioning Services
- Food Production
- Water
- Wood and Fiber
- Fuel

Supporting Services
- Nutrient Cycling
- Soil Formation
- Primary Production
- Habitat Provision

Cultural Services
- Spiritual
- Aesthetic
- Educational
- Recreational

Regulating Services
- Climate Regulation
- Flood Regulation
- Water Purification

UNCTAD's classification of Oceans based sectors

Key oceans based sectors

I. Goods (HS codes):

A. Marine Fisheries (HS 03.1-6)
B. Aquaculture (production data)
C. Seafood processing (HS 16.03-06; HS 2301.20; HS 2501.00)
D. Blue BioTrade (HS 0509; HS 1504.10-20; HS 1212.21-29; HS 2008; HS 0301.1100 and .19; HS 711.709; HS 050800)
E. Ships and parts manufacture (HS 89.01-02 and 05-06; HS 840610; HS 840721; HS840729 and HS 840810)

II. Services (W120 and CPC V2.1 2015)

F. Marine & Coastal Tourism
G. Trade in Fisheries services
H. Marine Transport
I. Marine Biotechnology & bioprospecting
J. Port Services
K. Coastal and marine area management, protection and restoration + Carbon sequestration
L. Ocean energy & renewable energy
4. UNCTAD's interventions on Oceans Economy

- **Exploring potential and promoting dialogue**
  - The Oceans Forum on Trade related aspects of SDG 14
  - 2 International Expert Meetings on Oceans economy in key sectors: fisheries, transport and tourism
  - Dozens of briefings, side events and seminars

- **Research and analysis**
  - Several ground braking publications on Oceans Economy and SIDS, Trade in Sustainable fisheries, maritime transport and tourism

- **Consensus building**
  - The UNCTAD/FAO/UNEP declaration on regulating fish subsidies

- **Key partners:**
  - FAO, UNEP, DOALOS, UNECE, Commonwealth, the ACP Group, and IOI
DOALOS/OLA IN THE UNITED NATIONS SYSTEM

United Nations Secretariat:
DOALOS: focal point in UN System for ocean affairs and law of the sea; discharges certain functions of Secretary-General as stated in UNCLOS and General Assembly resolutions; secretariat functions for CLCS
Division for Ocean Affairs and the Law of the Sea

- Performs responsibilities of the Secretary-General under the:
  - The United Nations Fish Stocks Agreement

- Performs the mandate provided to the Division in General Assembly resolutions
DOALOS: FUNCTIONS AND ACTIVITIES

• Core functions and activities in relation to UNCLOS:
  - Promote universal participation
  - Facilitate uniform and consistent application
  - Assist in implementation through:
    - advice and assistance
    - servicing of meetings
    - cooperation and coordination
    - discharging Secretary-General’s responsibilities e.g. depository functions
    - monitoring and dissemination of information
Other United Nations bodies and organizations involved in ocean issues
Legal/Policy Framework (Global)

- UNCLOS
- Safety of navigation
- Fisheries
- Environmental protection
- Rights of workers at sea
- Energy
- Maritime warfare
- Migration & refugees
- Energy
- Fisheries
- Environmental protection
- Rights of workers at sea
- Maritime warfare
- Migration & refugees
Legal/Policy Framework (National)

- Laws and Regulations for specific activities (e.g. navigation)
- Environmental laws and regulations
- Natural resources laws (e.g. fish, oil & gas)
- Marine scientific research laws
- Laws and regulations for transport and trade
- Labour laws
Main objectives of the field mission

• To introduce the OETS Project
• To have an opportunity to meet and interact with government officials in relevant sectors and consultants
• To build partnerships with FAO, UNDP, CRFM and other relevant agencies
• To gather sources of data and statistics
• To identify all relevant national regulations applicable to selected sectors
• To undertake the stakeholder mapping

For more information on the OETS Project see:
Oceans Economy and Trade Strategy

The OETS aims to support developing countries in realizing economic benefits from promising products and/or services in key ocean economy-based sectors within the UNCLOS framework. This will be done under the perspective of UNCTAD Oceans Economy pillars.

Focus on: products, sectors and value chains

Expected accomplishments

- Improved capacity of national stakeholders to assess and identify promising products and/or services in key ocean economy-based sectors within the UNCLOS framework.

- Strengthened capacity of stakeholders in defining policy options and implementing priority actions to support sustainable trade in products and services in ocean economy-based sectors in beneficiary countries.

- Increased understanding at the regional level on how to design and implement OETS as tool to promote sustainable trade of products and services in ocean economy-based sectors within the UNCLOS framework.

Beneficiary countries

- 3 developing countries or one sub region. Requests received so far: Barbados, Belize, Costa Rica & Saint Lucia.
OETS Outcome indicators

- **IA1.1** Two potential goods and/or services are identified by national stakeholders in each of the participating countries

- **IA1.2** 70 per cent of responding participants in the National Stakeholder Workshops indicate that they have a better understanding of key principles and obligations under UNCLOS for developing oceans economic sectors

- **IA2.1** The OETS and its action plan is validated by two national ministries in each of the beneficiary countries

- **IA2.2** One priority action derived from the OETS to promote sustainable trade of products and services in ocean-based economic sectors is implemented in each beneficiary country

- **IA3.1** 70 percent of responding participants in the regional workshop have acknowledged to have increased understanding on how to design and implement OETS as a tool to promote sustainable trade of products and services in ocean-based economic sectors within the UNCLOS framework

- **IA3.2** Three additional countries show interest in obtaining further support to develop OETS
Oceans Economy and Trade Strategies

Preliminary data analysis of oceans economy sectors in the country

- Production of data fact sheets
- Legal and institutional issues mapping

Selection of two sectors for further analysis

First multi-stakeholder workshop

OETS report based on oceans economy pillars with policy recommendations

- Economic
- Environmental
- Social
- Scientific
- Governance

Review and validation of OETS findings and recommendations

Multi-stakeholder validation workshop

Technical assistance and training in two priority areas per country

- Direct advice and training

Increasing understanding and sharing lessons

Regional workshop and multilateral events
UNCTAD's OCEANS ECONOMY PILLARS

**Economic**
- Promote sustainable economic growth in key oceans sectors
- Sustainable trade and market access for oceans-based products and services
- Seek to enable connectivity for people and markets
- Increase value addition

**Environmental**
- Sustainable access and use of living and non-living resources within safe ecological limits
- Apply precautionary and ecosystem approach
- Consider transboundary effects
- Seek to address climate change mitigation and adaptation

**Social**
- Incorporate the maintenance of coastal populations livelihoods, especially of small scale and artisanal fishermen
- Consider local employment sources
- Include food security considerations

**Scientific**
- Incorporate low carbon activities and technologies
- Promote investment in applied Research & Development
- Seek to enable transfer of technology and knowledge cooperative frameworks
- Include regulatory and policy obligations under UNCLOS and other UN treaties and soft law

**Governance**
- In line with national development priorities/plans
- Promote interagency and intergovernmental cooperation
- Respect local tenure and rights over marine resources

</table>
| Sustainable marine fisheries      | • Help fishers to access new fishing techniques and increase local value added  
• Promote improved management of cooperatives and associations  
• Provide training on fisheries management in marine protected areas  
• Provide targeted incentives and concessions for fishers that would reduce fuel and equipment costs  
• Develop clear policies and standards for joint ventures with foreign entities that ensure that Belizeans make the decisions and harvest the fish  
• Support community based initiatives that encourage local enterprise development                                                                                                                                                                                                                                                                                                                                                                    | Goods (trade data exists)

PART II: GLOBAL TRENDS IN SELECTED SECTORS
Global trends in fish stocks

- Current level of wild catch = 90 million tons. if we apply good fish management policies we may arrive to 93-94 million tons by 2035 (WB, FAO, IFPRI and AES)
- We have reached the limit and recovery is too slow

Global trends in aquaculture

- The gap in the supply over the next 15 years of fish will be filled by aquaculture by 2030
- Importance and urgency of global fish and sustainable aquaculture management
- Aquaculture business will be located mainly in developing countries in Asia, Latin America, Africa & Middle East
Developing countries are the main exporters with 54% of total world exports by 2016 (in value)
Composition of world fishery exports by commodity group, 2010-16

Source: UNCTAD calculations based on data UNCTADStat
Tariffs in fish products

- **Tariffs** are coming **down** regardless of lack of advances in the Doha Round.
- **MFN and average applied tariffs** (wild capture and aquaculture) are **not particularly high** as compared to bound rates. This is the consequence of unilateral tariff reduction & WTO accession commitment.
Some fish products in certain countries face tariff peaks and tariff escalation. Most tariff peaks are associated with high-income countries, where they are usually linked to the level of processing. Tariff peaks are important barriers to add value in developing countries. It’s in the interest of fish export and importing countries to reduce tariff and tariff peaks. The WTO negotiations and the UNCTAD's Global System of Trade Preferences among developing countries could have a role in facilitating trade in sustainable fisheries.

Subsidies in fish and fish products

- Global fisheries subsidies have been estimated to be as high as **$35 billion worldwide**

- About 57% of fishery subsidies can be categorized as negative, enhancing capacity to extract an already quite depleted natural resource

- Subsidies represent about **41% of the total fish exports value by 2014** (UNCTAD, 2016)

Non Tariff Measures

- 80% of all fish related NTMs are technical and phytosanitary measures

Source: UNCTAD (2016) Trade in Sustainable Fisheries based on WTO data.

- 1,250 fish related SPS/TBT measures, growing at 11.2% since 2010
- There are 2.5 times more SPS/TBT measures in fish than in manufactures
- And they are accumulating!
- NTMs could be important barriers for access to markets by small scale and artisanal fishermen (SDG 14.b)
- Urgent need to increase transparency, understanding, harmonization, capacity building and mutual recognition
Trends in Marine and Coastal Tourism

• Worldwide, travel and tourism generated $7.2 trillion (9.8% of global GDP) and 284 million jobs (1 in 11 jobs) to the global economy in 2015 (WTTC, 2016).

• Its growth of 3.1% was faster than the wider economy. Despite challenges, the sector is forecast to continue outperforming global GDP growth in 2015 (about 2.4%).

• Marine and coastal tourism is one of its fastest growing sectors. It has been estimated by the United Nations Tourism Organization (UNWTO, 2010) that one of each two tourists chose coastal and insular destinations.
Trends in Marine and Coastal Tourism

- Tourism directly contributes to GDP of many Island and coastal developing countries in the form of capital investment, employment, creates upward and downward supply-chain effects and generates household spending of those employed directly or indirectly in tourism.

- Ecotourism then can serve as an incentive for ecosystem preservation, going well beyond the necessity to conserve fish stocks by maintaining catch limits at or below MSY.

- Fishers displaced from fisheries with declining fish stocks or fleeing conflict between artisanal and commercial scale fisheries often find alternative livelihood opportunities in the ecotourism sector (e.g. hostel, restauration, handicrafts and tours).

- Linkages between fisheries and tourism can promote sustainability and higher income for communities in both sectors.
