Notes:

- (1) The symbol ** indicates the grouping to which the country belongs and the percentage share shown applies. The percentage is the share of exports of each commodity shown by the country in the relevant grouping total exports for that commodity (i.e. "developing", which refers to developing economies; "transition", which refers to transition economies and "developed", which refers to developed economies).
- (2) Data are estimated at least for one of the reference years.

Notes :

- (1) Le symbole ** indique le groupement auquel le pays appartient et par rapport auquel est calculé le pourcentage. Ce pourcentage est la part que représentent les exportations du produit par le pays par rapport aux exportations du même produit par le groupement auquel le pays appartient («developing» se réfère aux économies en développement, «transition» aux économies en transition et «developed» aux économies développées).

3.3 Concentration and structural change indices of product markets Imports

3.3 Indices de concentration et de changement structurel des marchés de produits Importations

Sources:

- UNCTAD secretariat calculations based on UN DESA Statistics Division, COMTRADE database and on IMF, *Direction of Trade Statistics*

Notes:

(1) Concentration index:

The Herfindahl-Hirschmann index is a measure of the degree of market concentration. It has been normalized to obtain values ranking from 0 to 1 (maximum concentration), according to the following formula:

$$H_i = \frac{\sqrt{\sum_{j=1}^n \left(\frac{x_{ij}}{X_i}\right)^2} - \sqrt{\frac{1}{n}}}{1 - \sqrt{\frac{1}{n}}}$$

where

H_i = Value of concentration index for product i

x_{ij} = Value of exports or imports for country j and product i

$$X_i = \sum_{j=1}^n x_{ij} \quad \text{and}$$

n = maximum number of individual economies

An index value that is close to 1 indicates a very concentrated market. On the contrary, values closer to 0 reflect a more equal distribution of market shares among exporters or importers.

(2) Structural change index:

This index, ranging from 0 to 1 reveals the structural change in trade for a particular product as compared to the reference year (1995 = 0).

An index value close to 1 indicates a significant change in the composition of exporters (importers). On the contrary, values closer to 0 would demonstrate a higher degree of "traditionality" in the markets over the period concerned.

The value is calculated as follows:

$$I_i = \frac{\sum_j |S_{ij}^1 - S_{ij}^0|}{2}$$

where

I_i = Value of structure index for product i

S_{ij}^0 = Share of trade of product i for country j in 1995

S_{ij}^1 = Share of trade of product i for the country j in the concerned year

Notes :

(1) Indice de concentration :

L'indice Herfindahl-Hirschmann mesure le degré de concentration des marchés. Il a été normalisé afin d'obtenir des valeurs comprises entre 0 et 1 (concentration maximale), d'après la formule suivante :

$$H_i = \frac{\sqrt{\sum_{j=1}^n \left(\frac{x_{ij}}{X_i}\right)^2} - \sqrt{\frac{1}{n}}}{1 - \sqrt{\frac{1}{n}}}$$

où

H_i = Valeur de l'indice de concentration pour le produit i

x_{ij} = Valeur des exportations ou des importations du pays j pour le produit i

$$X_i = \sum_{j=1}^n x_{ij} \quad \text{et}$$

n = nombre maximum d'économies individuelles

Un indice proche de 1 indique une concentration très forte du marché pour ce produit en particulier. En revanche, une valeur proche de 0 démontre une répartition plus homogène du commerce entre les exportateurs ou les importateurs.

(2) Indice de changement structurel :

Cet indice, dont la valeur est comprise entre 0 et 1, représente les changements de structure du commerce par rapport à une année de référence (1995 = 0).

Une valeur proche de 1 indique un important changement structurel du commerce de ce produit, c'est à dire, une grande variation des parts de marché au sein des exportateurs ou importateurs, par rapport à l'année de référence. Plus la valeur de l'indice est proche de 0, plus la structure du commerce de ce produit est stable.

Il est calculé comme suit :

$$I_i = \frac{\sum_j |S_{ij}^1 - S_{ij}^0|}{2}$$

où

I_i = Valeur de l'indice de changement structurel, pour le produit i

S_{ij}^0 = Part du commerce du produit i pour le pays j par rapport au commerce total de ce produit pour l'année 1995

S_{ij}^1 = Part du commerce du produit i pour le pays j , par rapport au commerce total de ce produit pour l'année concernée

4.1.1 Export and import concentration and diversification indices of countries and geographical regions

Sources:

- UNCTAD secretariat calculations based on UN DESA Statistics Division, *COMTRADE* database

Notes:

- (1) Number of products (at SITC, Revision 3, 3-digit group level) exported or imported by country or country grouping; this figure includes only those products that are greater than 100 000 dollars or more than 0.3 per cent of the country's or country group's total exports or imports.
- (2) Diversification index that ranges from 0 to 1, reveals the extent of the differences between the structure of trade of the country or country group and the world average. The index value closer to 1 indicates a bigger difference from the world average.

Diversification index is computed by measuring absolute deviation of the country share from world structure, as follows:

$$S_j = \frac{\sum_i^n |h_{ij} - h_i|}{2}$$

where h_{ij} = share of product i in total exports or imports of country or country group j

h_i = share of product i in total world exports or imports.

This index is a modified Finger-Kreinin measure of similarity in trade. For more information, please consult the article of Finger, J. M. and M. E. Kreinin (1979), "A measure of 'export similarity' and its possible uses" in the *Economic Journal*, 89: 905-12.

- (3) The Herfindahl-Hirschmann index is a measure of the degree of market concentration. It has been normalized to obtain values ranking from 0 to 1 (maximum concentration), according to the following formula:

$$H_j = \frac{\sqrt{\sum_{i=1}^n \left(\frac{x_i}{X}\right)^2} - \sqrt{1/n}}{1 - \sqrt{1/n}}$$

where H_j = country or country group index

x_i = value of exports of product i

$$X = \sum_{i=1}^n x_i$$

and n = number of products (at SITC Revision 3, 3-digit group level) .

Sources :

- Calculs du secrétariat de la CNUCED fondés sur des données de ONU DAES, Division de statistique, base de données *COMTRADE*

Notes :

- (1) Nombre de produits (au niveau de la CTCL révision 3, position à 3 chiffres) exportés ou importés par chaque pays ou groupes de pays; cependant, seuls les produits ayant une valeur supérieure à 100 000 dollars ou comptant pour plus de 0,3 pour cent des exportations ou des importations totales du pays ou groupe de pays sont inclus.
- (2) L'indice de diversification, dont la valeur est comprise entre 0 et 1, indique si la structure par produits des exportations d'un pays ou groupe de pays diverge peu ou beaucoup de la structure par produits des exportations totales dans le monde. Plus l'indice est proche de 1, plus la divergence est forte.

L'indice de diversification mesure la déviation absolue de la structure du pays par rapport à la structure mondiale comme ci-dessous :

$$S_j = \frac{\sum_i^n |h_{ij} - h_i|}{2}$$

où h_{ij} = part du produit i dans le total des exportations (ou importations) du pays j
 h_i = part du produit i dans le total des exportations (ou importations) mondiales.

Cet indice est une variante de l'indicateur de Finger-Kreinin sur la similarité de la structure du commerce. Pour plus d'information, veuillez consulter l'article de Finger, J. M. et M. E. Kreinin (1979), "A measure of 'export similarity' and its possible uses", dans *IEconomic Journal*, 89: 905-12.

- (3) L'indice Herfindahl-Hirschmann mesure le degré de concentration des marchés. Il a été normalisé afin d'obtenir des valeurs comprises entre 0 et 1 (concentration maximale), d'après la formule suivante :

$$H_j = \frac{\sqrt{\sum_{i=1}^n \left(\frac{x_i}{X}\right)^2} - \sqrt{1/n}}{1 - \sqrt{1/n}}$$

où H_j = indice du pays
 x_i = valeur des exportations du produit i

$$X = \sum_{i=1}^n x_i$$

et n = nombre de produits (de la CTCL révision 3, position à 3 chiffres).

Notes:

- (1) To improve data coverage, especially for the latest periods, the following procedure was used in the calculation of unit value indices:
 - A set of average prices indices at SITC (Revision 3, 3-digit) group level was constructed using UNCTAD, Commodity Price Statistics, international and national sources and UNCTAD secretariat estimates.
 - At the country level, unit value indices were calculated using previous year's trade values at the SITC 3-digit level, available in table 3.2 as weights. In some instances these indices may differ from the estimates published in official sources, since the main aim is to provide tentative estimates for most developing countries on a comparable basis.
- (2) Transition economies are included after 2000 only except for value indices of exports and imports.

Notes :

- (1) Afin d'améliorer la couverture des données et spécialement pour les années récentes, la méthode suivante a été utilisée pour le calcul des valeurs unitaires :
 - Un ensemble d'indices de prix moyens au niveau des groupes de la CTIC (révision 3, position à 3 chiffres) a été construit en utilisant des données de CNUCED, *Statistiques des produits de base*, des sources internationales et nationales ainsi que des estimations du secrétariat de la CNUCED.
 - Au niveau des pays individuels, les indices de la valeur unitaire ont été calculés en utilisant comme pondération les valeurs des exportations et des importations de l'année précédente, disponibles dans la table 3.2.
 - Dans certains cas ces indices peuvent différer des estimations publiées dans les sources officielles, le but principal étant de fournir des estimations approximatives et comparables pour la plupart des pays en développement.
- (2) Les économies en transition ne sont incluses qu'après 2000 à l'exception des indices de valeur des exportations et des importations.

Notes:

- (1) Product categories are defined in terms of SITC Revision 3, and all corresponding Harmonized System (HS) 6-digit codes have been aggregated for each category.
- (2) Simple average for each product group calculated from simple average at HS 6-digit level.
- (3) Weighted average for each product group calculated from simple average at HS 6-digit level. Country's own imports at HS 6-digit level for corresponding years are used as weights. Where imports are not reported, mirror imports have been compiled using exports of partner countries.
- (4) Before 2001, data included in the South Africa Customs Union (SACU).
- (5) From 2008 onwards, member of the European Union.
- (6) From 2004 onwards, member of the European Union.
- (7) For the union, data refer to the composition of the group during that year.
- (8) From 1988 to 1999, data refer to the South Africa Customs Union (SACU).

Notes :

- (1) Les catégories de produits sont définies sur la base de la CTCI, révision 3, et pour chaque catégorie, les codes à 6 chiffres du Système harmonisé (SH) correspondants ont été agrégés.
- (2) Moyenne arithmétique, pour chaque catégorie de produits, calculée à partir des moyennes arithmétiques au niveau du code à 6 chiffres du SH.
- (3) Moyenne arithmétique pondérée, pour chaque catégorie de produits, calculée à partir des moyennes simples au niveau du code à 6 chiffres du SH. Pour chaque année, les coefficients de pondération sont les importations de chaque marché au niveau du code à 6 chiffres du SH. Lorsque les importations n'étaient pas disponibles, elles ont été évaluées par les données miroir basées sur les exportations des pays partenaires.
- (4) Avant 2001, données incluses dans l'Union douanière d'Afrique du Sud.
- (5) À partir de 2008, membre de l'Union européenne.
- (6) À partir de 2004, membre de l'Union européenne.
- (7) Pour une année donnée, les tarifs de l'union se réfèrent à la composition du groupe durant cette année.
- (8) De 1988 à 1999, données relatives à l'Union douanière d'Afrique du Sud.

Notes:

- (1) Years 1990, 1991, 1992: the breaks in series result from the data reporting of the former Yugoslavia (SFR) and the countries that succeeded from it, as well as from the inclusion of the figures of the Russian Federation, while the former USSR data are not available.
- (2) Years 2004 and 2005: break in series.
- (3) Year 2004: break in series.
- (4) Year 1996: exports, break in series.
- (5) Year 2005: break in series.
- (6) Year 2006: break in series.
- (7) Data from 1980 to 1994 inclusive refer to Belgium-Luxembourg and from 1995 onwards to Belgium only. Year 2007: break in series.

Notes:

Arrivals of visitors represent the total number of non-resident visitors who arrived in a reporting economy during a given year. A visitor can remain in an economy for a short time and not spend a night there, in which case he is not considered a tourist. A tourist is a person who stays for at least one night. All tourists are also visitors. When the same person visits a country several times in a year, the total number of arrivals is counted. Similarly, when a person travels to several countries during one trip, her/his arrival in each country is recorded separately. Countries differ in the way in which they count arrivals. Most take into account all arrivals of non-resident visitors at national borders, while others count arrivals at hotels and other types of tourist accommodation. The different approaches are marked by footnotes.

Tourists' overnight stays refer to the number of nights spent by non-resident tourists in a reporting country and concern all types of tourism accommodation.

Total expenditure of visitors corresponds to the sum of items "Travel receipts" and "Passenger transport" in IMF balance-of-payments data. It refers to expenditures of non-resident visitors within the territory of a reporting economy, including the costs they pay for transportation.

Expenditure excluding transport corresponds to the item "Travel receipts" in IMF balance-of-payments data. It refers to expenditures of non-resident visitors within the territory of a reporting economy. Transport expenditures are not included.

- (a) Arrivals of non-resident tourists at national borders.
- (c) Arrivals of non-resident tourists in all types of accommodation establishments.
- (d) Arrivals of non-resident tourists in hotels and similar establishments.
- (g) Arrivals of non-resident visitors at national borders.
- (1) Arrivals - Year 1995: break in series. Data until 1994 (inclusive) concern only arrivals at hotels and similar establishments, while later figures cover arrivals at national borders.
- (2) Arrivals - Year 2000: break in series owing to new accommodation coverage.
- (3) Arrivals - Year 1995: break in series. Data until 1994 (inclusive) concern only arrivals of tourists at national borders, while later figures cover arrivals of visitors at national borders. For details, see information notes in "Indicator" dimension.
- (4) Data for overnight stays of tourists include only Bonaire and Curaçao; Data for the travel expenditures cover only Bonaire and Sint Maarten; Data referring to visitors' arrivals cover all the Netherlands Antilles.
- (5) Data on total tourism expenditure refer to Serbia only.
- (6) Arrivals - Year 1995: break in series. Data until 1994 (inclusive) concern arrivals at national borders, while later figures cover only arrivals at hotels and similar establishments.
Data for overnight stays cover Switzerland only; Liechtenstein is not included.

Notes :

Les **Arrivées des visiteurs** représentent le nombre total de visiteurs qui sont arrivés dans l'économie déclarante durant une année. Le visiteur peut rester dans une économie brièvement et ne pas y passer la nuit ; dans ce cas, il n'est pas considéré comme touriste. Le touriste passe au moins une nuit dans le pays. Tous les touristes sont aussi des visiteurs. Quand une personne se rend dans un pays plusieurs fois par année, chaque visite est comptée séparément. De même, si quelqu'un se rend dans plusieurs pays durant un voyage, son arrivée dans chaque pays est prise en compte. Les pays comptent les arrivées des visiteurs de manières différentes: la plupart des pays prennent en compte toutes les arrivées aux frontières nationales, tandis que les autres comptent les arrivées dans des hôtels et autres types de logements touristiques. Les approches différentes sont identifiées par des notes de bas de page.

Les **Nuitées des touristes** se réfèrent au nombre de nuits que les touristes non-résidents ont passées dans le pays déclarant et concernent tout type d'établissement touristique.

Les **Dépenses totales des visiteurs** correspondent à la somme des rubriques "Revenus des voyages" et "Transport des passagers" de la balance des paiements du FMI. Les dépenses totales des visiteurs se réfèrent aux dépenses des visiteurs non-résidents sur le territoire de l'économie déclarante, y compris les dépenses pour le transport.

Les **Dépenses sans transport** correspondent à la rubrique "Revenus des voyages" de la balance des paiements du FMI. Elles se réfèrent aux dépenses des visiteurs non-résidents sur le territoire de l'économie déclarante. Les dépenses pour le transport n'y sont pas incluses.

- (a) Arrivées de touristes non-résidents aux frontières nationales.
- (c) Arrivées de touristes non-résidents à tout type de logement.
- (d) Arrivées de touristes non-résidents aux hôtels et autres types de logement similaire.
- (g) Arrivées de visiteurs non-résidents aux frontières nationales.
- (1) Arrivées - Année 1995 : rupture de série. Les données jusqu'à l'année 1994 (inclusive) concernent seulement les arrivées dans les hôtels, tandis que les chiffres des années suivantes couvrent les arrivées aux frontières nationales.
- (2) Arrivées - Année 2000 : rupture de série suite à une classification différente des hébergements.
- (3) Arrivées - Année 1995 : rupture de série. Les données jusqu'à l'année 1994 (inclusive) concernent seulement les arrivées des touristes, tandis que les chiffres des années suivantes couvrent les arrivées des visiteurs. Pour plus d'informations, voir les notes de la dimension "Indicateur".
- (4) Les données sur les nuitées des touristes concernent seulement Bonaire et Curaçao; Les données sur les dépenses de voyage concernent seulement Bonaire et Sint Maarten; Les chiffres concernant les arrivés des visiteurs couvrent la totalité des Antilles néerlandaises.
- (5) Les données sur les dépenses totales de voyage se réfèrent à la Serbie seulement.
- (6) Arrivées - Année 1995 : rupture de série. Les données jusqu'à l'année 1994 (inclusive) concernent les arrivées aux frontières nationales, tandis que les chiffres des années suivantes couvrent seulement les arrivées aux hôtels et autres types d'hébergements similaires.
Les données sur les nuitées des touristes se réfèrent à la Suisse et ne couvrent pas le Liechtenstein.

Notes:

- (1) Deadweight ton (DWT) is the weight measure of a vessel's carrying capacity. It includes cargo, fuel and stores.
- (2) Including passenger/cargo combined.
- (3) Year 2002: break in series; from 2002 onwards, ships registered under the flag of the Marshall Islands (developing country) are shown separately; before they were included with the United States of America (developed country).
- (4) From 2002 onwards, ships registered under the flag of the Marshall Islands are shown separately; before they were included with the United States of America.
- (5) Including San Marino.
- (6) Open-registry or international-registry country: A ship owner who registers his or her vessel in an open-registry or international-registry country does not need to have any connection with a country of registry. The number of open-registry countries has varied over the years. The following 10 economies appear in the group for this table: Antigua and Barbuda, Bahamas, Bermuda, Cyprus, Isle of Man, Liberia, Malta, Marshall Islands, Panama, and Saint Vincent and Grenadines. Before 1995, Isle of Man is included. From 1995 onwards, the data for this group cover also the fleet of the Isle of Man, included otherwise with figures of the United Kingdom and not shown separately.
- (7) Before 1995, Isle of Man is included.

Notes :

- (1) Tonne de port en lourd (TPL) : c' est une mesure de poids de la capacité de charge d'un navire. Il inclut la cargaison, le carburant et les magasins.
- (2) Y compris les cargos mixtes.
- (3) Année 2002 : rupture de série ; les navires immatriculés aux Îles Marshall (pays en développement) sont présentés séparément à partir de 2002 ; avant, ils étaient compris dans les chiffres des États-Unis (pays développé).
- (4) Les navires immatriculés aux Îles Marshall sont présentés séparément à partir de 2002 ; avant, ils étaient compris dans les chiffres des États-Unis.
- (5) Y compris Saint-Marin.
- (6) Pays de libre immatriculation ou de registre international : Un propriétaire qui enregistre son navire dans un pays "de libre immatriculation ou de registre international" n'a pas besoin d'avoir une relation avec ce pays. Le nombre de pays de "libre immatriculation" a changé au cours des années. Les 10 pays suivants font partie du groupe présenté dans ce tableau : Antigua-et-Barbuda, Bahamas, Bermudes, Chypre, îles Marshall, île de Man, Libéria, Malte, Panama et Saint-Vincent-et-les Grenadines. À partir de 1995, les données de ce groupe comprennent aussi la flotte de l'île de Man. Avant cette date, les données n'étaient pas présentées séparément car elles étaient comprises dans la flotte du Royaume-Uni.
- (7) Y compris l'île de Man avant 1995.

6.2 Instability indices and trends in free-market prices for selected primary commodities
2000 = 100

6.2 Indices d'instabilité et tendances des prix sur le marché libre d'une sélection de produits de base
2000 = 100

Sources:
- UNCTAD calculations based on *UNCTADstat* Commodity Price Statistics

Notes:

- (1) The measure of price instability is

$$1/n \sum_{t=1}^n [(Y(t) - y(t))/y(t)] * 100$$

where

$Y(t)$ is the observed magnitude of the variable
 $y(t)$ is the magnitude estimated by fitting an exponential trend to the observed value
 n is the number of observations

Accordingly, instability is measured as the percentage deviation of the variables concerned from their exponential trend levels for a given period.

- (2) The growth rate of each period has been calculated using the formula:

$$\log(p) = a + b(t)$$

where

p is the price index and t is time.

- (3) Constant 2000 dollars (current dollars divided by the United Nations unit value index of manufactured goods exported by developed economies).

- Calculs du secrétariat de la CNUCED basés sur les statistiques des prix des produits de base de *UNCTADstat*

Notes :

- (1) L'indice d'instabilité des prix est calculé selon

$$1/n \sum_{t=1}^n [(Y(t) - y(t))/y(t)] * 100$$

où

$Y(t)$ est la valeur observée de la variable
 $y(t)$ est la valeur estimée par ajustement à la tendance exponentielle des valeurs observées
 n est le nombre d'observations

L'instabilité est le pourcentage de déviation des variables en question par rapport à la ligne de tendance exponentielle pour une période donnée.

- (2) Le taux de croissance de chaque période a été calculé selon la formule :

$$\log(p) = a + b(t)$$

où

p est l'indice de prix et t le temps.

- (3) Dollars constants 2000 (dollar courant divisé par l'index des Nations Unies de la valeur unitaire des exportations des produits manufacturés par les économies développées).
