New Database of ASEAN Non-Tariff Measures

14 April 2016

ABOUT UNCTAD

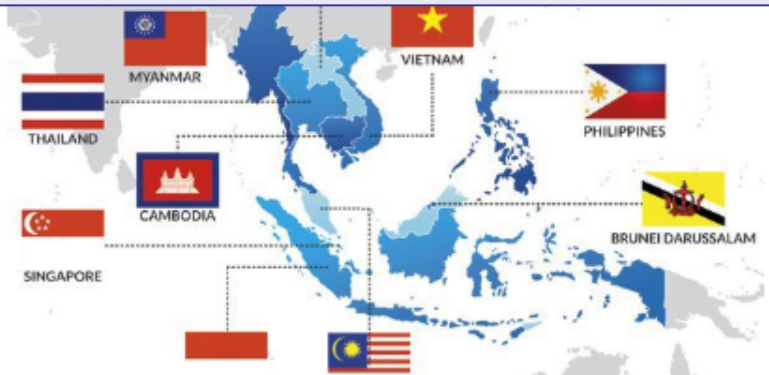

Following a joint project to collect, validate, and store data on non-tariff measures (NTMs), UNCTAD and the Economic Research Institute for ASEAN and East Asia have launch a Website that provides information on NTMs for the ten ASEAN countries.

- Office of the Secretary-General
- Membership
- Quadrennial Conferences

Quote

“In spite of their growing importance in regulating trade, the exact impact of NTMs on trade flows is not very well understood.

There is an urgent need to develop a better understanding and transparency of existing NTMs.”

TRAINS UNCTAD portal

Home TABLES by PRODUCTS TABLES by MEASURE TABLES by MEMBERS DETAILED QUERY **ANALYSIS** About

NTMs TRAINS researcher file

You can download here the NTMs TRAINS researcher file for use in Stata (version 12) containing all non-tariff measures aggregated at the HS 6-digit level by researchers and data analysts. You will also find a file with the names and country codes to expand the data to a fully bilateral structure. The data can easily be used for descriptive statistics as well as for quantitative analysis by merging the file for instance with trade and other datasets.

The data collection follows a standardized and globally coherent approach described in the [UNCTAD Guidelines to Collect Data on Non-Tariff Measures](#). However, the different regulatory practices in each country complicate cross-country comparisons. The user guide provides more information. Furthermore, the highest quality control standards are applied but collecting and classifying NTMs is a very complex exercise so that errors can occur.

Get the data

Please refer to the database as "UNCTAD (2017), TRAINS NTMs: The Global Database on Non-Tariff Measures".

UNCTAD is the focal point within the United Nations system for the integrated treatment of trade and development. UNCTAD's Programme on NTMs aims to enhance the transparency on NTMs and to provide support to policy makers.

Welcome to the NTM Hub

Non-tariff measures (NTMs) are policy measures other than tariffs that can potentially have an economic effect on international trade in goods. They are increasingly shaping trade, influencing who trades what and how much. For exporters, importers and policymakers, NTMs represent a major challenge. Though many NTMs aim primarily at protecting public health or the environment, they also substantially affect trade through information, compliance and procedural costs.

Understanding the uses and implications of NTMs is essential for the formulation of effective development strategies to meet the Sustainable Development Goals. The NTM Hub serves as a gateway to that end, providing information on classification, data, research and analysis and policy support. Increasing transparency and understanding of NTMs can build capacity of policymakers, trade negotiators and researchers to strike the delicate balance between the reduction of trade costs and the preservation of public objectives.

Data collection starts from reading the regulation ... to extract the measures

Source ➡ Document / Regulation ➡ Measure/s

- ➡ Affected Products
- ➡ Affected countries
- ➡ Objectives / Purpose (where appropriate)

One measure is :

- ✓ **'unilateral'** when it affects all countries in the world (similar to MNF)
- ✓ **'bilateral'** when it affects one or a few (but not all) countries at a time

One measure is :

- ✓ **'horizontal'** when it affects ALL products simultaneously

Examples of horizontals

Philippines

NTM code: C9

Description: 3 In compliance with Department of Finance DO 33-2014 and Bureau of Internal Revenue Memorandum Order 10-2014, all importers and Customs brokers shall first apply for accreditation with the BIR for the issuance of their respective Importer or Broker Clearance Certificate (ICC or BCC). Upon securing these, importers and Customs brokers shall file an application for accreditation with the BOC-Account Management Office. 5 All importers and Customs brokers are required to apply for registration under the BOC Client Profile Registration System (CPRS)

Source: Bureau of Customs - Revised guidelines for registration of importers and Customs brokers with the BOC pursuant to DOF Department Order 33-2014

Legal text: Revised guidelines for registration of importers and Customs brokers with the BOC pursuant to DOF Department Order 33-2014

Vietnam

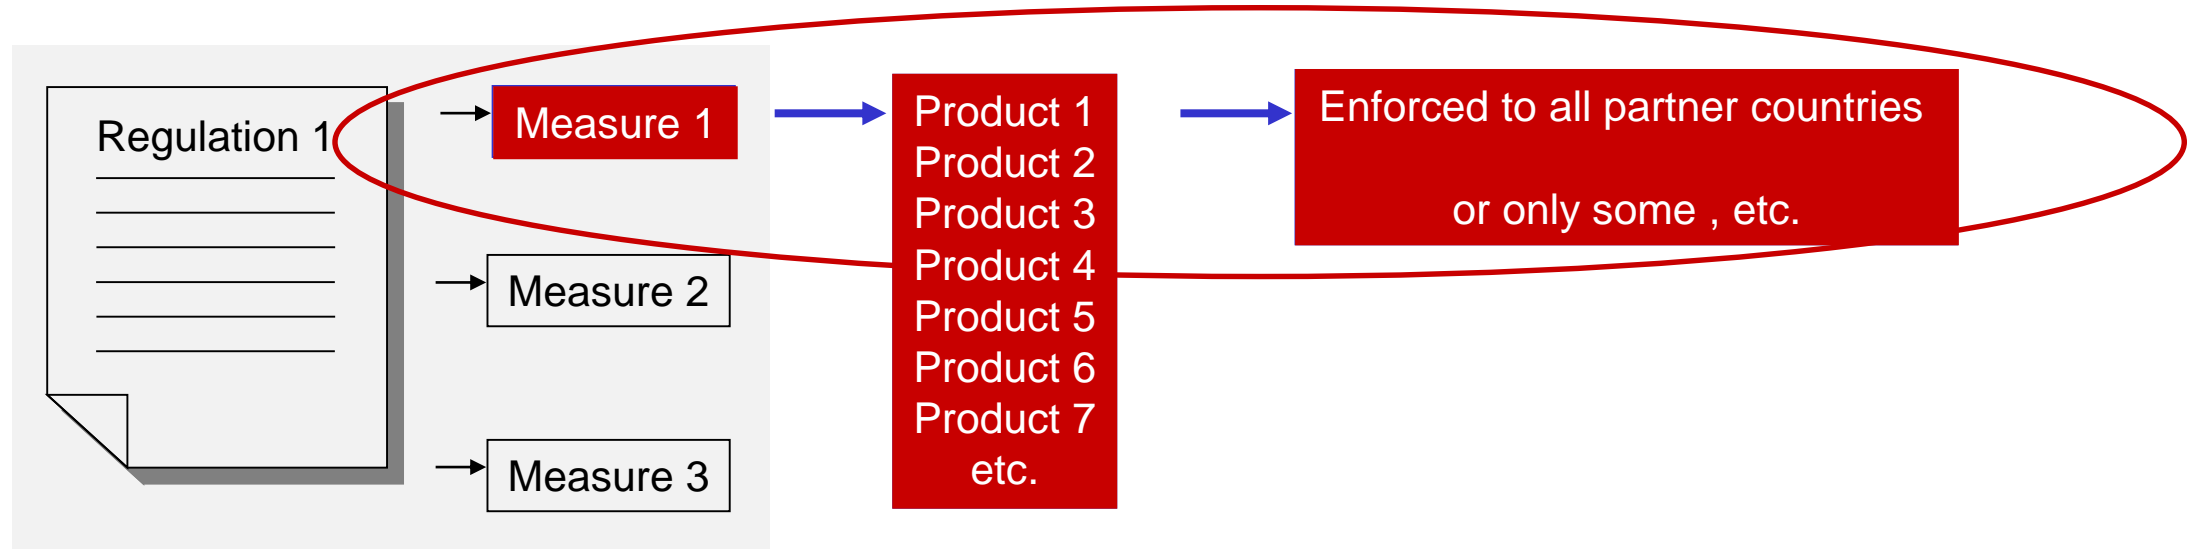

NTM code: H9

Description: This measure sets out procedures and documents for registering rights to import (by trader with no presence in Vietnam)

Source: Luat Viet Nam - Circular on guiding the registration of trading rights for foreign traders with no commercial presence in Vietnam

Legal text: Regulation which instruct registration of trading rights for foreign traders with no commercial presence in Vietnam

Data collection starts from reading the regulation ... to register the enforced NTM

This is sometimes called 'a measure'

It is the number visible in the summary page in TRAINS

Measures: Sanitary and Phytosanitary [SPS] [A], Technical Barriers to Trade [TBT] [B], Pre-shipment inspection [INSP] [C], Contingent trade protective measures [CTPM] [D], Quantity control measures [QC] [E], Price control measures [PC] [F], Other measures [OTH] [G,H,I,J,K,L,M,N,O], Export-related measures [EXP] [P] Reset to defaults

Country(ies) imposing: Any

Partner(s) affected: Any [Include the category "All partners"]

THE UNSEEN IMPACT OF NON-TARIFF MEASURES:

Insights from a new database

Key findings:

- Developed countries regulate more products and a higher share of imports than developing countries
- Agricultural products are more regulated than manufactures and natural resources
- Technical Barriers to Trade are the most frequent form of NTMs
- Based on data for 109 countries, covering 90% of global trade

NTM use pattern, grand global average

- Frequency Index
- Coverage Ratio
- ◆ Prevalence Score

Import measures

Export measures

- FI : Almost half the traded products face at least one NTM
- CR: About 3/4 of the trade face at least one NTM
- PS: every traded product faces more than 2 MTN on average

- Based on data for 109 countries, which cover 90% of world trade

NTM use pattern

- Frequency Index
- Coverage Ratio
- ◆ Prevalence Score

Import measures

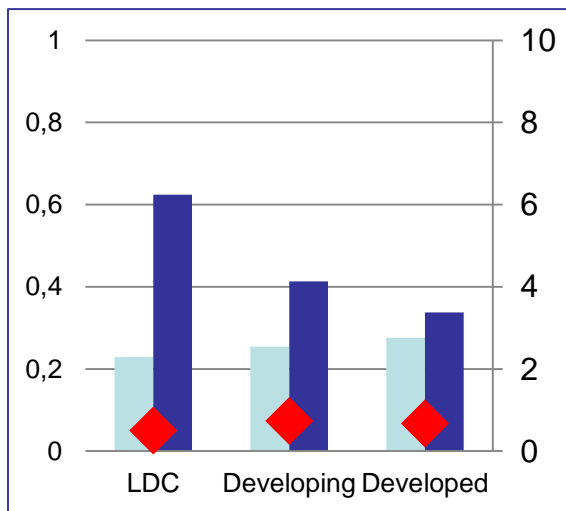

By region

By sector

Export measures

- Developed countries regulate their products, both in number of products and number of measures
- Agriculture products (A) are more regulated than Natural resources (E) and manufactures (M)
- Based on data for 109 countries, which cover 90% of world trade

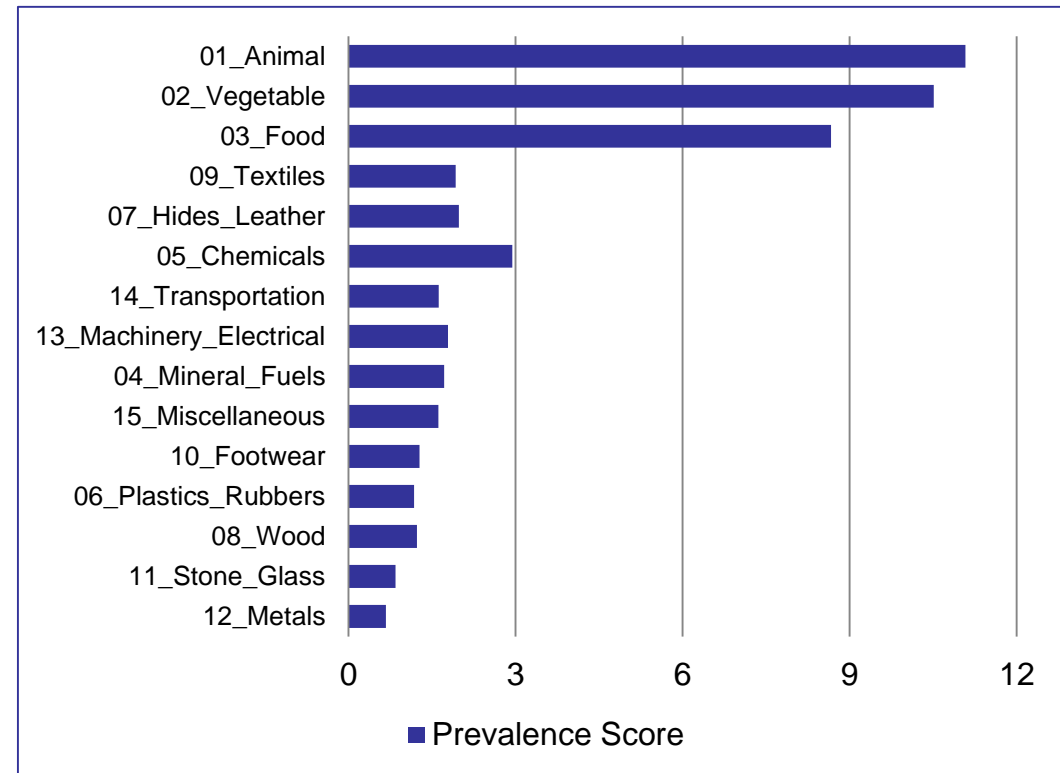

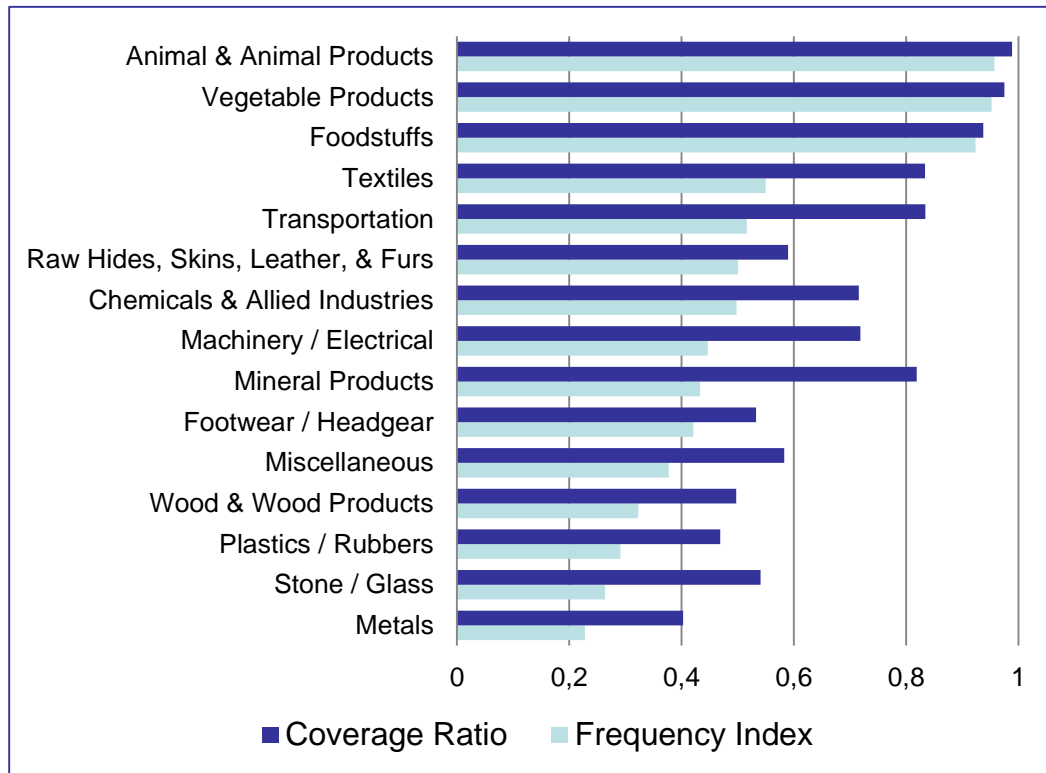

Enhancing transparency

Support low-income countries and small producers

Getting it right now

NTM use pattern, by sector

NTM use pattern (2016)

- Frequency Index
- Coverage Ratio
- ◆ Prevalence Score

By region

- Use patterns of NTM is different for sub-regions, within broad regions

NTM use pattern, by type

- Frequency Index
- Coverage Ratio
- ◆ Prevalence Score

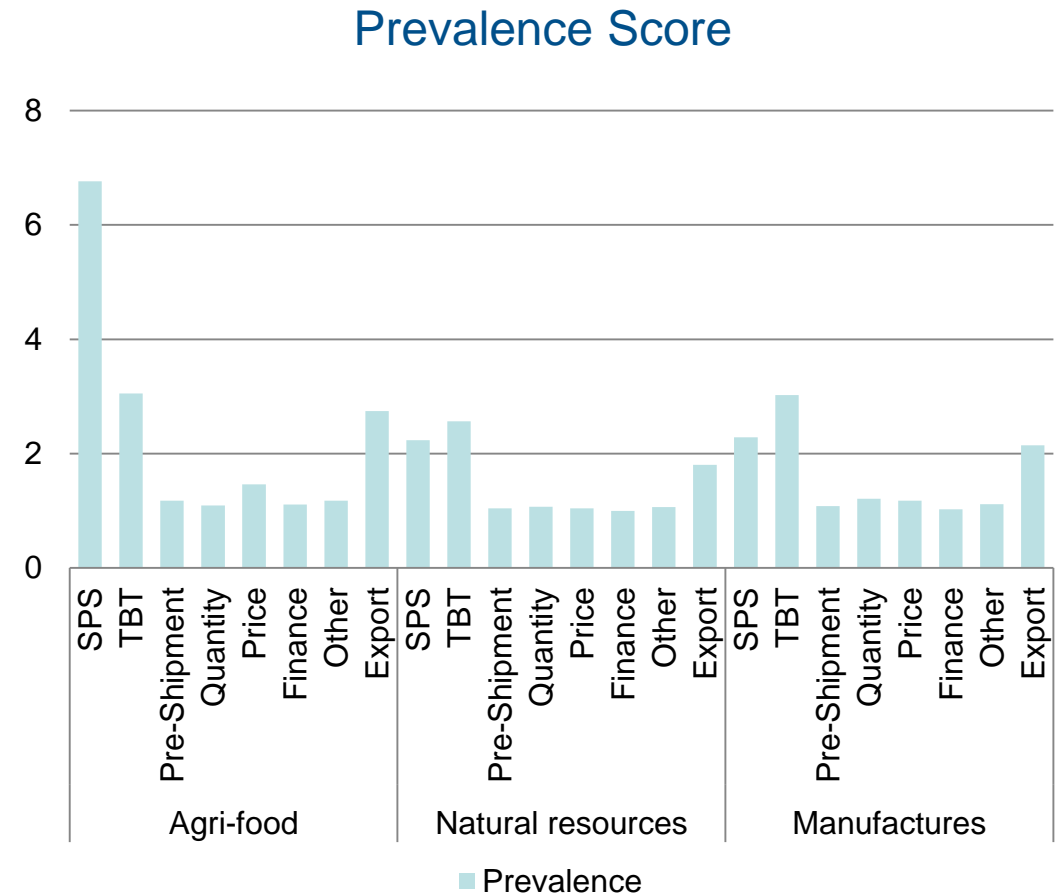

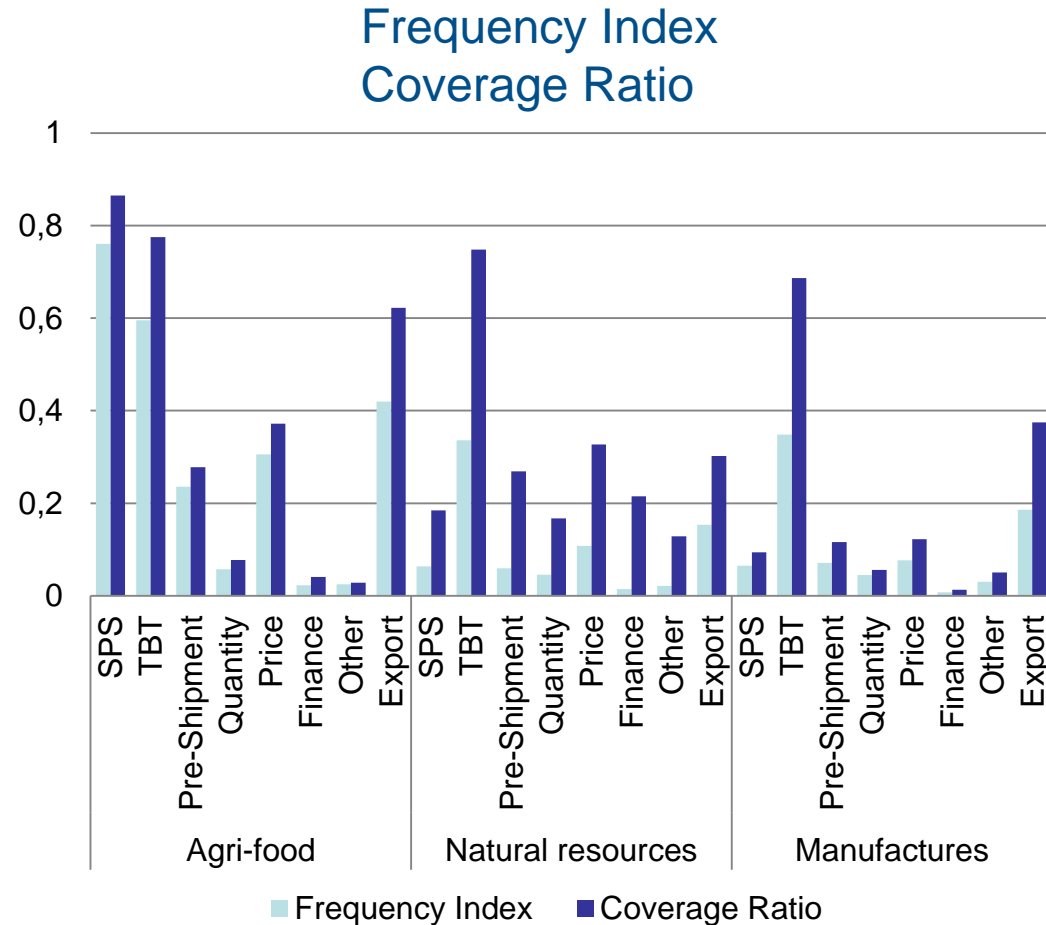

- Technical measures are more frequently used than other types
- SPS measures have the highest Prevalence Score

Regulatory reassessment at the national level is important to ensure coherent policy measures

Regulatory cooperation should be pursued at multiple levels

Key findings, by type of measure and group of products

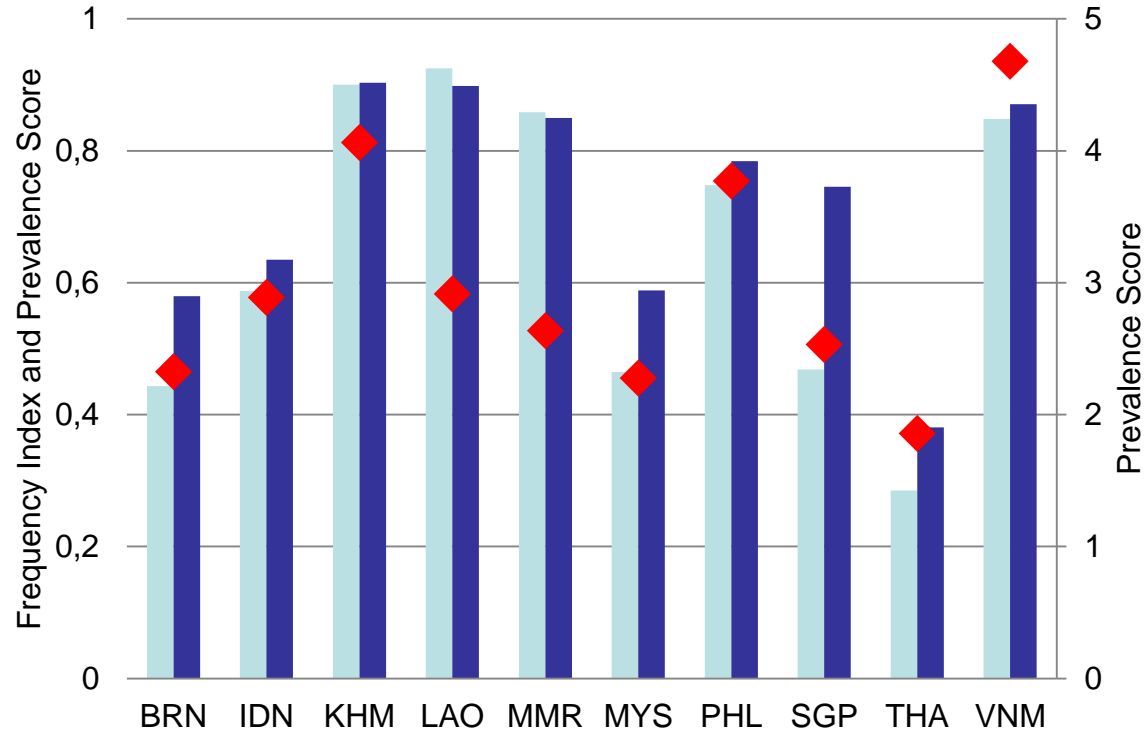

- Agri-food products are highly regulated by SPS and TBT
- Manufactures are regulated mainly by TBT

- SPS measures have the highest Prevalence Score, more than 6 measures on average on every product

NTM use pattern in ASEAN , 2018

By country, selected

- Frequency Index
- Coverage Ratio
- ◆ Prevalence Score

- FI : 0.56
- CR : 0.68
- PS : 2.84

Import NTMs in ASEAN , 2015 & 2018

By country, selected

Frequency Index, 2015 & 2018

Coverage Ratio, 2015 & 2018

Prevalence Score, 2015 & 2018

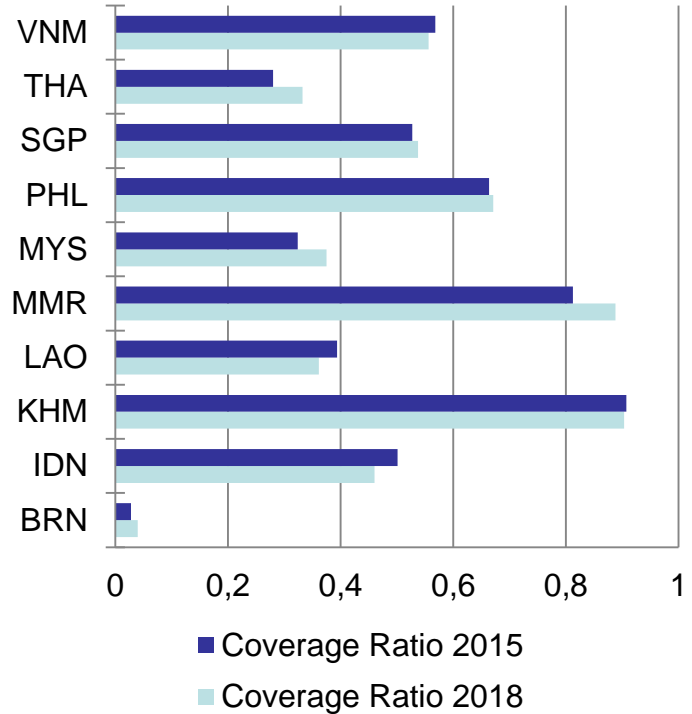

Export NTMs in ASEAN , 2015 & 2018

By country, selected

Frequency Index, 2015 & 2018

Coverage Ratio, 2015 & 2018

Prevalence Score, 2015 & 2018

NTM positively correlated to GDPpc (globally)

NTM negatively correlated to average tariffs

Coverage Ratio

Prevalence Score

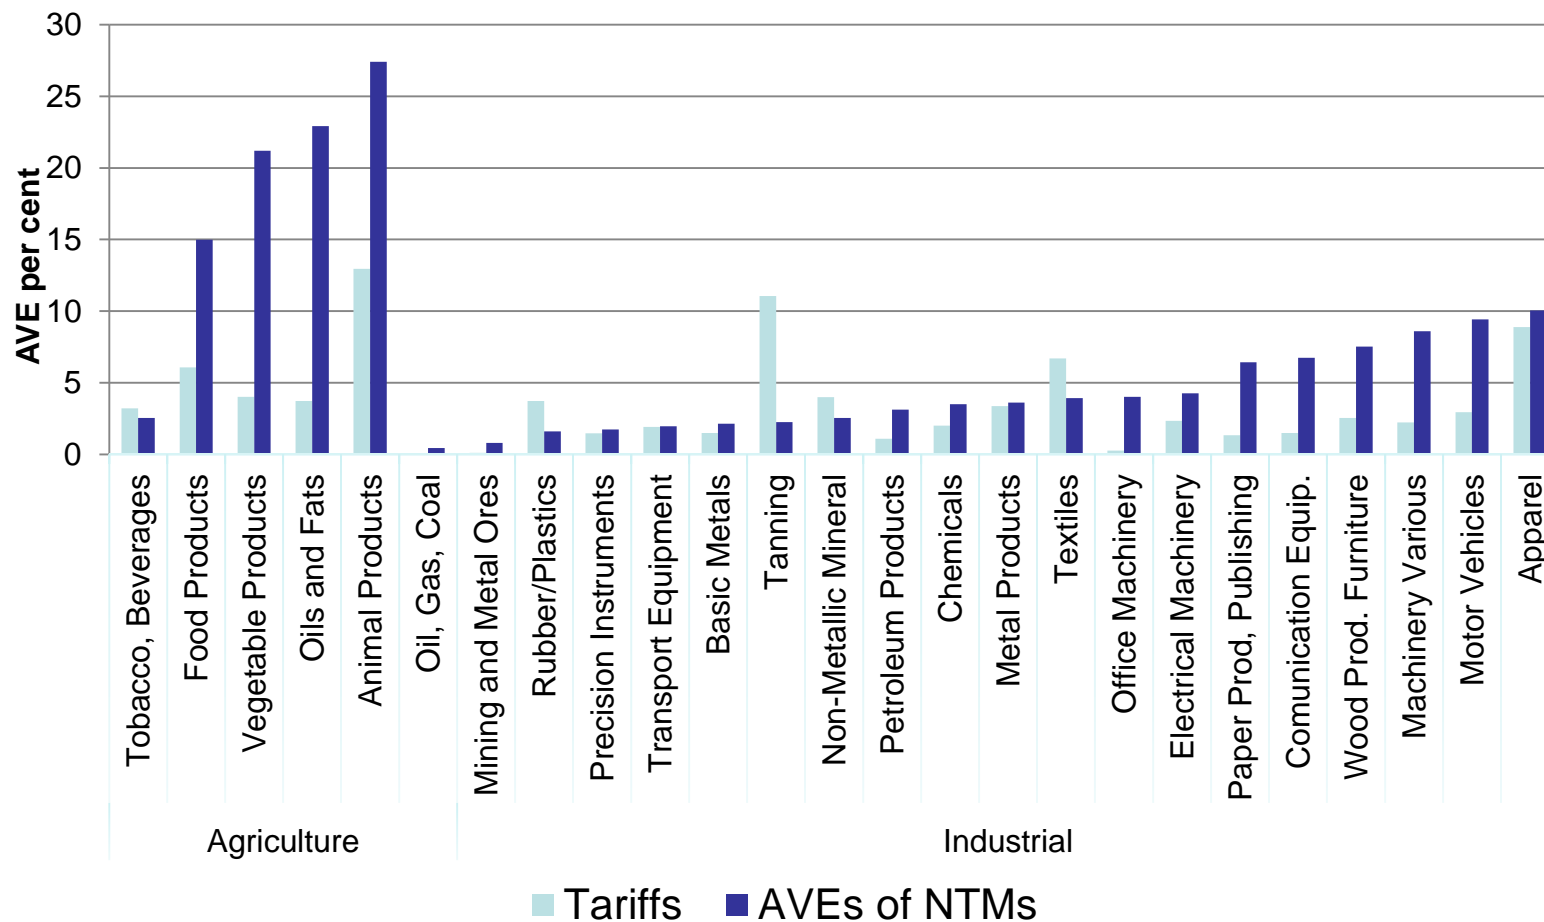

- More developed countries use :
- more NTM
 - less tariffs (policy substitution?)

 - But also
 - Better trade facilitation

GDP per capita (ln)

Tariffs (weighted average)

Tariffs and NTM , by sector Ad-Valorem Equivalent (AVE)

- Tariffs are normally less costly than AVE
- AVE for agriculture are much higher
 - Those countries that are net food exporters will be more affected

The ad-valorem equivalents (AVEs) of NTM is one way to assess its impact

The interpretation of AVEs of NTMs is similar to that of a tariff:

- **AVEs represent the additional costs that the presence of NTMs has on imports**
- The AVE are price effects of NTM, in %, on trade flow

Example

- an AVE of 10% indicates that the NTM add about 10% to the price of the traded product

Estimates at HS6, and bilateral

About 40 importers with data on import NTM

About 200 exporters

Kee and Nicita (2017, 2018)

Global average is about

- 11 % for technical measures
- 9 % for other types of measures
- Although most AVEs are low, their distribution is quite dispersed, with some relatively high values

* Do not estimate prohibitive NTM , where there is no trade

Exercise. Frequency Index, Coverage Ratio, Prevalence Score

Please open the excel file called
“NTM&trade LAO.xls”

It contains information on [bilateral exports and imports](#) of your country, at [HS6 digit level](#), and also [information on NTM](#).

Specifically, how many NTM of each type for each bilateral trade relationship and HS6 product.

The file has more than 9 400 lines of information. This is because the number of existing products is around 5200, and countries in the world (as trade partners) are around 200. These are all combined. Data is for 2016.

2. Product code

5. 'X' are exports

nbrAO are the number of all import NTM

1. Reporting country

4. 'M' are imports

nbrA nbrB nbrC nbrE nbrF nbrG are the number of NTM of each type

nbrP are the number of export NTM

3. Partner country

Exercise. Frequency Index, Coverage Ratio, Prevalence Score

Notes

- To compute Indicators on chapters A B C D E F G H, you need to **review imports**

Questions

1. Frequency Index

- a. How many products does '*your country*' import ?
- b. How many of those have an NTM?
- $FI = a / b$

2. Coverage Ratio

- c. How much does '*your country*' import ? (add up the value)
- d. How much of those imports have an NTM? (add up the value only counting the lines that have NTM)
- $CR = c / d$

3. Prevalence Score

- Calculate the average of column Column O, "nbrAO"
- Include all products that are imported, including those with zero values, but not those that are not imported (zero import value)
- This is the PS

1. Frequency Index Laos

a) How many products does Laos import ?

(products times trade partner= traded lines)

- **Suggestion.** Sort by Imports, descending order
- Then count how many lines there are with positive value of imports. Keep this number as (a)

Total traded lines are 8
8 323

a) How many of those have an NTM?

- **Suggestion.** Now restrict the rest of the analysis using only the traded lines (those lines for which there are imports. Some values with NTM will be discarded)
- Sort again using the variable '**nbrAO**', and count how many lines there are with positive value of import NTM. Keep this number as (b)

Traded lines with NTM are

b) $FI = b / a$

2. Coverage Ratio Laos

a) How much does Laos import ? (import value)

- **Suggestion.** Sum up all imports column. Keep this number as (a)

Total value of imports

b) How much imported value has to comply with NTMs?

- **Suggestion.** Restrict the analysis using only the traded lines (those lines for which there are imports)
- Create a new column where you will copy the value of imports , but only for those lines with positive value of 'nbrAO'
- Sum up this new column (sub-set of imports column). Keep this number as (b)

c) $CR = b / a$

Import value with NTM

3. Prevalence Score Laos

- a) Spot again the variable 'nbrAO', and compute an average of these values, including zeroes
- **Attention.** Keep the lines with trade value only, and use all of them in the average formula, including the ones with no NTM (zero value). Keep this number as (a)

Average number of NTM

THANK YOU

Incidence measures

Frequency index
Share of products affected
by at least one NTM

$$F_i = \frac{\sum_{j=1}^J \sum_{p=1}^{HS} NTM_{ijp} D_{ijp}}{\sum_{j=1}^J \sum_{p=1}^{HS} D_{ijp}} \times 100$$

Coverage Ratio
Share of trade affected by
at least one NTM

$$C_i = \frac{\sum_{j=1}^J \sum_{p=1}^{HS} NTM_{ijp} V_{ijp}}{\sum_{j=1}^J \sum_{p=1}^{HS} V_{ijp}} \times 100$$

Prevalence Score
Number of different NTM
on a product

$$P_i = \frac{\sum_{j=1}^J \sum_{p=1}^{HS} NTM_{ijp} \#NTM_{ijp} D_{ijp}}{\sum_{j=1}^J \sum_{p=1}^P D_{ijp}} \times 100$$

p, products in HS6
j, partner country
i, imposing country

NTM_{ijp}, dummy for presence of NTM
D_{ijp}, dummy for product being traded
V_{ijp}, value of trade

Incidence measures

Regulatory Intensity
Standardized Number of
different NTM on a product

$$RI_i = \sum_{p=1}^{HS} S_p^w \frac{\sum_{j=1}^J D_{ijp} (\#NTM_{ijp} - \overline{\#NTM_p})}{\sigma \#NTM_p}$$

p, products in HS6
j, partner country
i, imposing country

NTM_ijk, dummy for presence of NTM
D_ijk, dummy for product being traded
V_ijk, value of trade
