

# Achieving “Internet for All” will require an ecosystem approach

A

## Infrastructure

**15%** of people around the globe have no electricity<sup>1</sup>

**31%** of people live outside of 3G coverage<sup>2</sup>

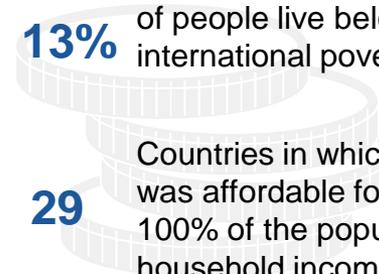

B

## Affordability

**13%** of people live below the international poverty line<sup>4</sup>

**29%** Countries in which broadband was affordable for the full 100% of the population once household incomes are taken into account<sup>3</sup>

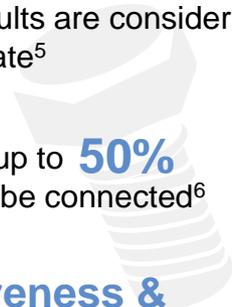

**~4 billion non-users**

C

**15%** of adults are considered illiterate<sup>5</sup>

Women are up to **50%** less likely to be connected<sup>6</sup>

**Skills, awareness & cultural acceptance**

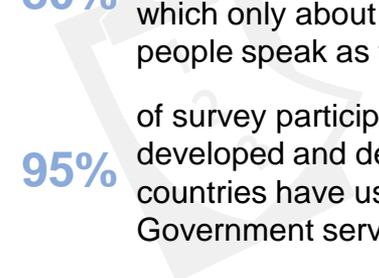

D

**80%** of online content is only available in 1 of 10 languages, which only about three billion people speak as their first<sup>7</sup>

**95%** of survey participants in 12 developed and developing countries have used online Government services<sup>8</sup>

**Content**

**Internet for All: A Framework for Accelerating Internet Access Adoption, see [http://www3.weforum.org/docs/WEF\\_Internet\\_for\\_All\\_Framework\\_Accelerating\\_Internet\\_Access\\_Adoption\\_report\\_2016.pdf](http://www3.weforum.org/docs/WEF_Internet_for_All_Framework_Accelerating_Internet_Access_Adoption_report_2016.pdf)**
