

CROSS-BORDER DATA FLOWS FOR DEVELOPING COUNTRIES

Key Issues

Stefaan Verhulst

10 May 2023

THE POTENTIAL OF DATA RE-USE FOR DEVELOPMENT

1. Digitalization has enabled a massive **datafication of society**
2. The unique characteristics of digital data (intangible/non-rivalrous) enables **the re-use of data**, especially promising within a resource-constraint context
3. Key concerns involve the
 - a. Potential misuse;
 - b. Lack of access and data asymmetries;
> Cross Border Flows

The screenshot shows a web page from the OECD iLibrary. At the top right, the 'OECD iLibrary' logo is visible. The main heading of the article is '30. Reusing data responsibly to achieve development goals'. Below the heading, the author is identified as 'Stefaan G. Verhulst' from 'The GovLab at New York University'. An 'Abstract' section follows, containing text about harnessing data for development, data collaboration, and the need for responsible use and reuse of data. A small blue circular icon with an upward-pointing arrow is located at the bottom right of the abstract text.

DATA COLLABORATIVES AND CROSS BORDER FLOWS

1. Data collaboratives can provide access to data across borders and sectors
2. Key challenges involve making data collaboration
 - a. Systematic
 - b. Sustainable
 - c. Responsible

RECOMMENDATIONS

Systematic:

- Prioritization of #purposes for accessing data
- Professionalizing data stewardship
- Establishing the stack of data collaboration

Sustainable:

- Improve the accounting/funding of data flows
- Limit carbon footprint

Responsible:

- Prevent fragmentation of principles, processes and practices
- Establish a social license of re-use
