

Echo Techno Happy Clam

Story behind the project

Low production

Poor water quality

Lack of real-time monitoring
and management

Problem Statement

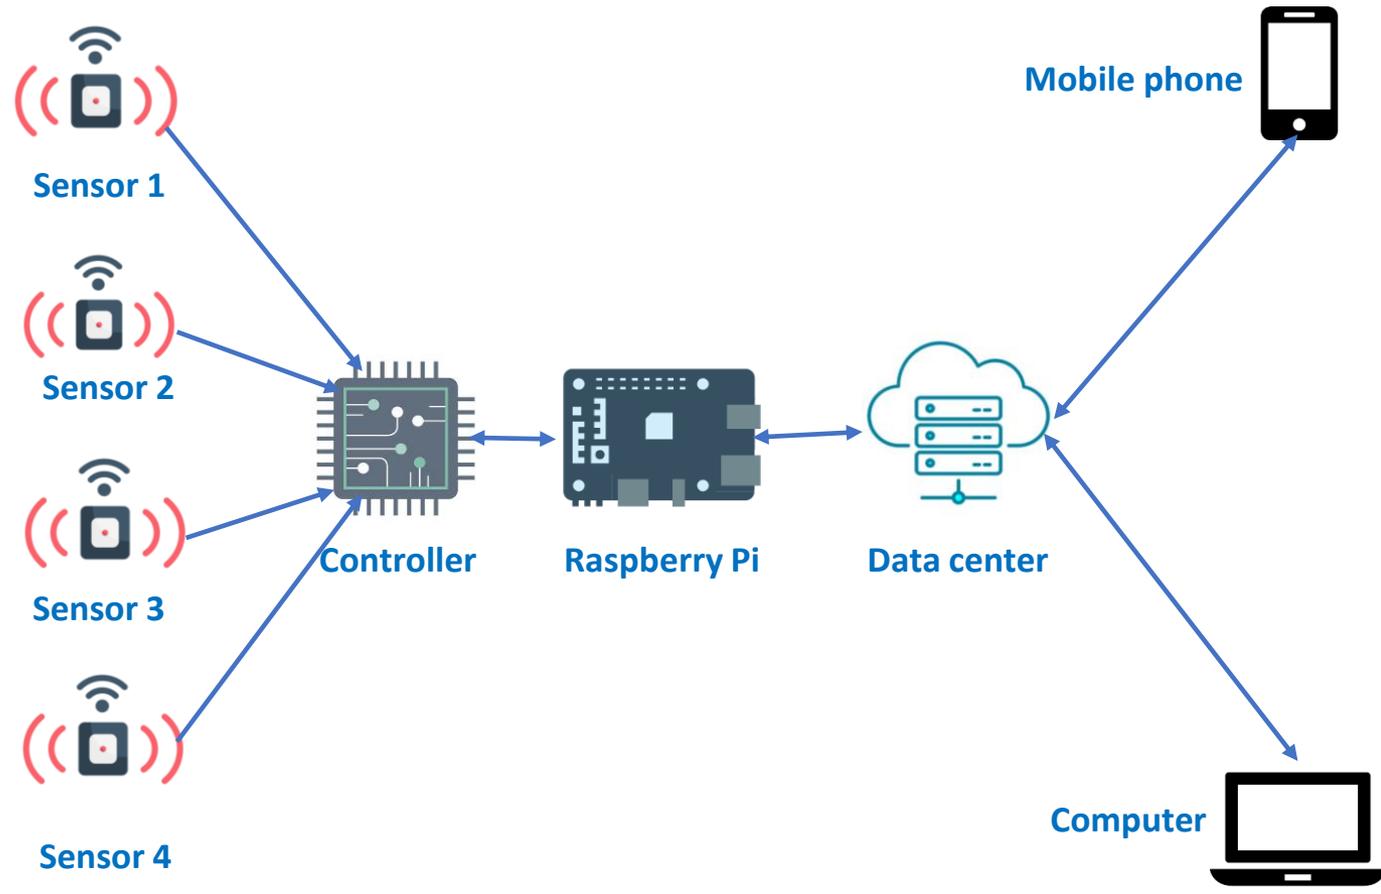

**How might we develop new technology
to assist the issue of
water monitoring and management?**

The solution: Sensors to measure water quality

Water gate

Early detection is the key

**AI (IoT and Machine Learning) for
Monitoring Water Quality and
Management**

Improved clam production

Bio-Circular-Green (BCG) Model

Echo Techno Happy Clam

- **AI for Monitoring Water Quality and Management**
- **Cost effective**
- **Time saving**
