SDC Green Gold and Animal Health Project

What are the advantages of meat from the Mongolian herder's livestock herd?

- It grazes alongside wild animals on healthy pastures with a wide variety of plants,
- It herds on pasture that has a status about disease-free or infection-free from trade barrier infectious diseases,
- Full coverage of planned veterinary measures at the appointed time,
- ► It is under the constant control of a contracted veterinary organization, ...

PRODUCTS OF HEALTHY ANIMAL ORIGIN AND NOT CONTAMINATED WITH SUBSTANCES THAT MAY ADVERSED AFFECT HUMAN HEALTH

How can this be assured?

VETERINARY DRUG (ANTIBIOTICS) RESIDUE CONROL

All animals must be tagged

The total number of various animals in the system is recorded by each herder (annual census report A)

Herders are responsible for the cost of ear tags and the service cost of ear tagging (Law on animal health 7.4.1)

Livestock must be tagged before obtaining a veterinary certificate for the purpose of transporting and sampling livestock outside the soum territory. If livestock does not have ear tags, take a picture of the animal, submit it into the system and issue an electronic certificate. At this point, a list of abstract numbers for each animal is created in the MAHIS.

Livestock supply contract

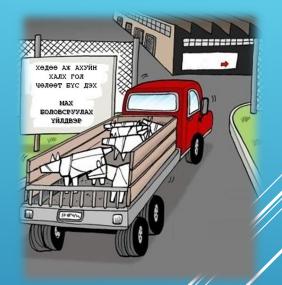

factory requirements at the clarified purchased peen have þe number, **Q** ivestock

Herders' cooperatives
purchased eligible
animals from herders on
the condition of postpayment, and those
animals were ear-tagged
and herded separately

A contracted veterinarian was invited and conduct a medical examination of the herd, provide necessary treatment and services, and issued a veterinary certificate

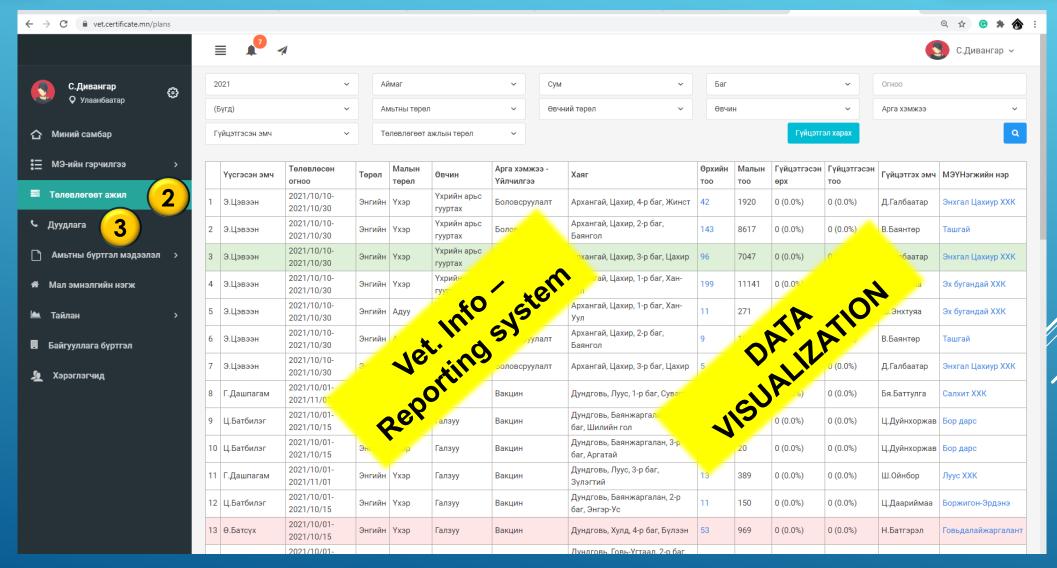

The livestock was delivered to the factory within the time specified in the contract and the price was paid to the herders

LESSONS LEARNED: Herders agreed to pay the price of livestock later, the factory allowed the price to be set at 1000-2000 MNT higher than the current price, all animals were tagged, grazed in remote pastures, all animals underwent veterinary examination and services, received Vet.cert, and received locally All information about the animals was delivered to the factory before transportation and the animals were transported by special vehicles. (some contractors didn't get animals from the cooperatives!!!)
