Introduction

National expert team completed UNCTAD Training Course on Application of the Classification System (March 2017)

From May to October 2017, data collection for the NTM database.

More than 2500 documents were studied from 4 sources, of which 100 relevant documents were identified.

After a detailed analysis and updating, 55 documents were included in the final report.

COVID-19 in Kyrgyzstan

On March 18, 2020, the first cases of COVID-19 were detected in Kyrgyzstan. A state of emergency was declared on March 22, and a state of emergency was declared in cities with large populations from March 24 to May 11. Kyrgyzstan has closed borders and suspended all domestic and international flights.

Surge in the spread of the virus in June, July 2020.

Increase the number of infections and deaths.

Cases:	81 156
Recovered:	76148
Death:	1356

Statistic for January,2020

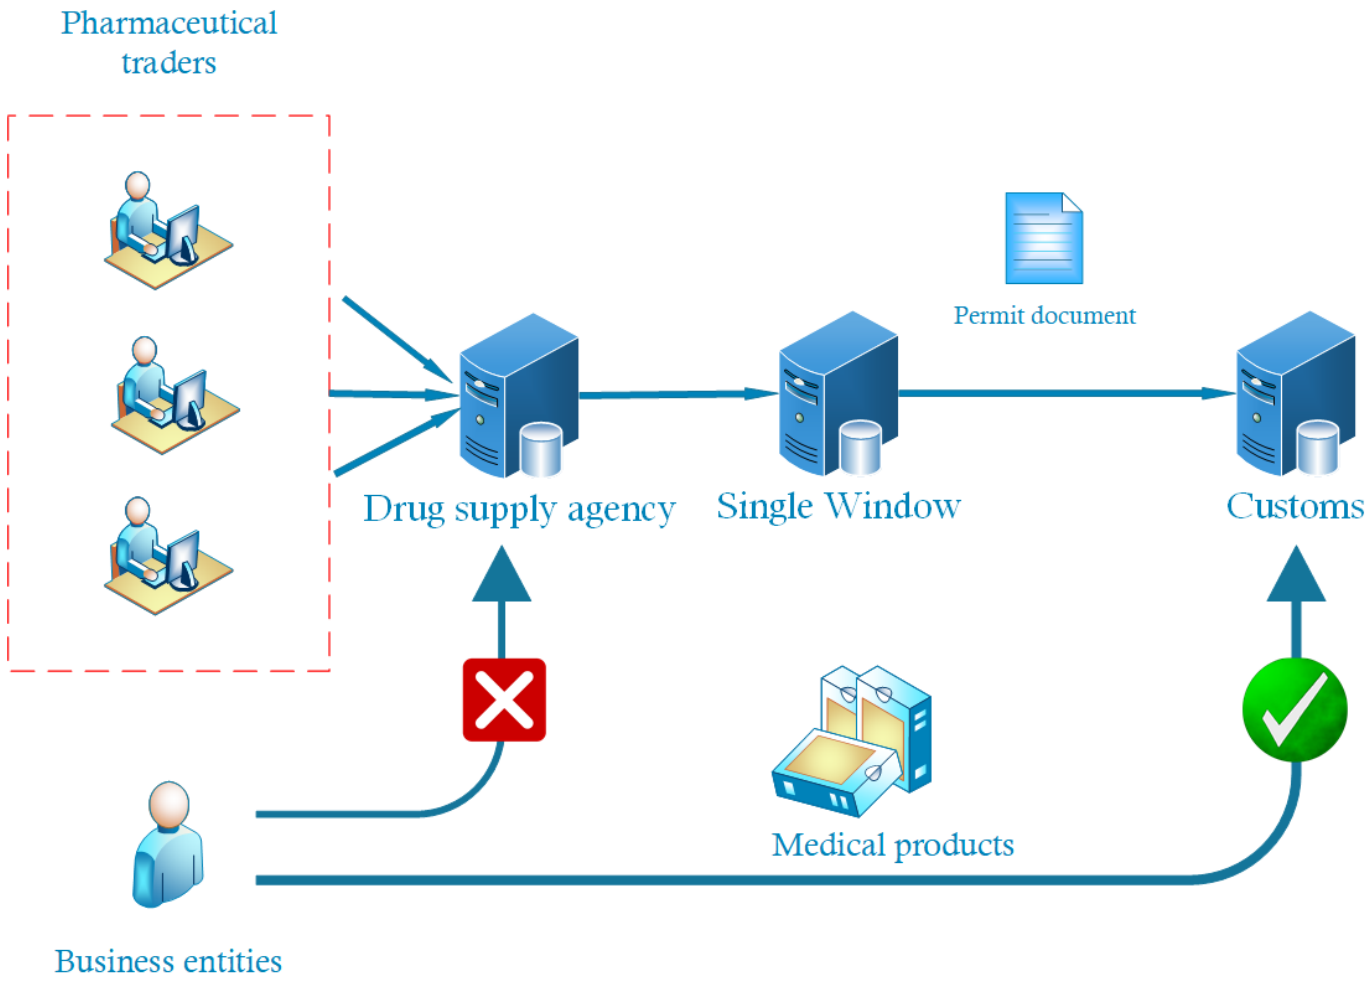
Government Measures Against COVID-19

- Shortage of medicines and medical equipment during the peak of the pandemic;
- Ordinary citizens and companies began to import medical equipment and personal protective equipment.

Permit Documents Free

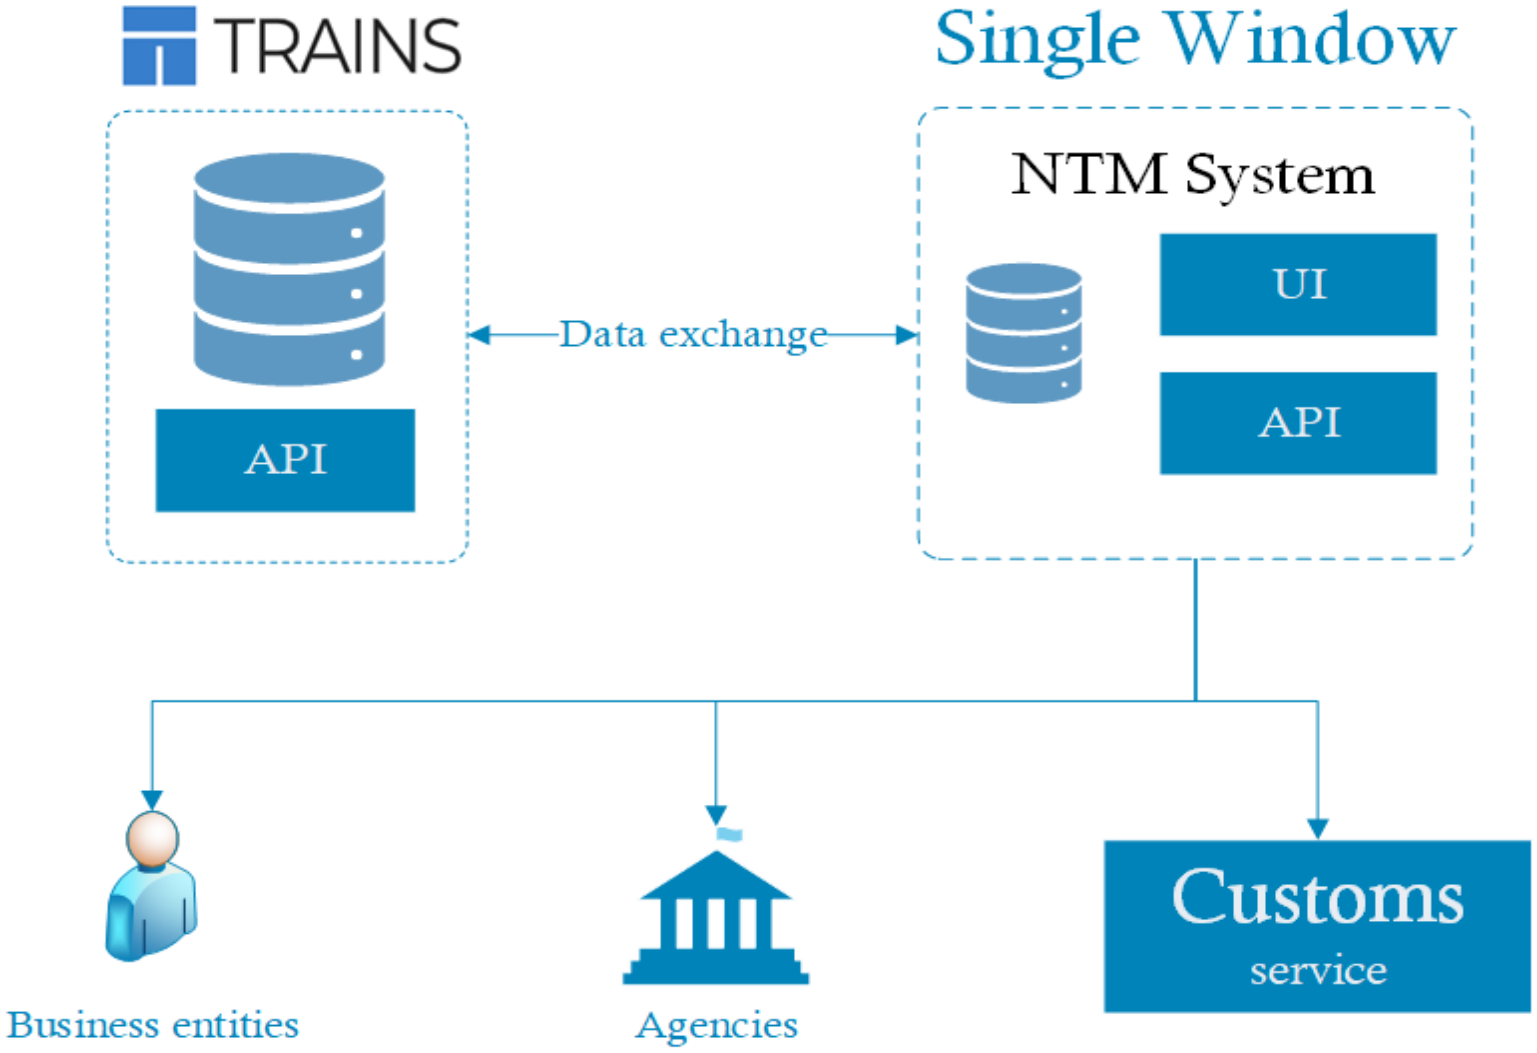
- Government made a decision to exempt the receipt of permits for import some of medical goods and equipment.
- Import medical equipment by business entities was allowed.

Single Window Role against COVID-19



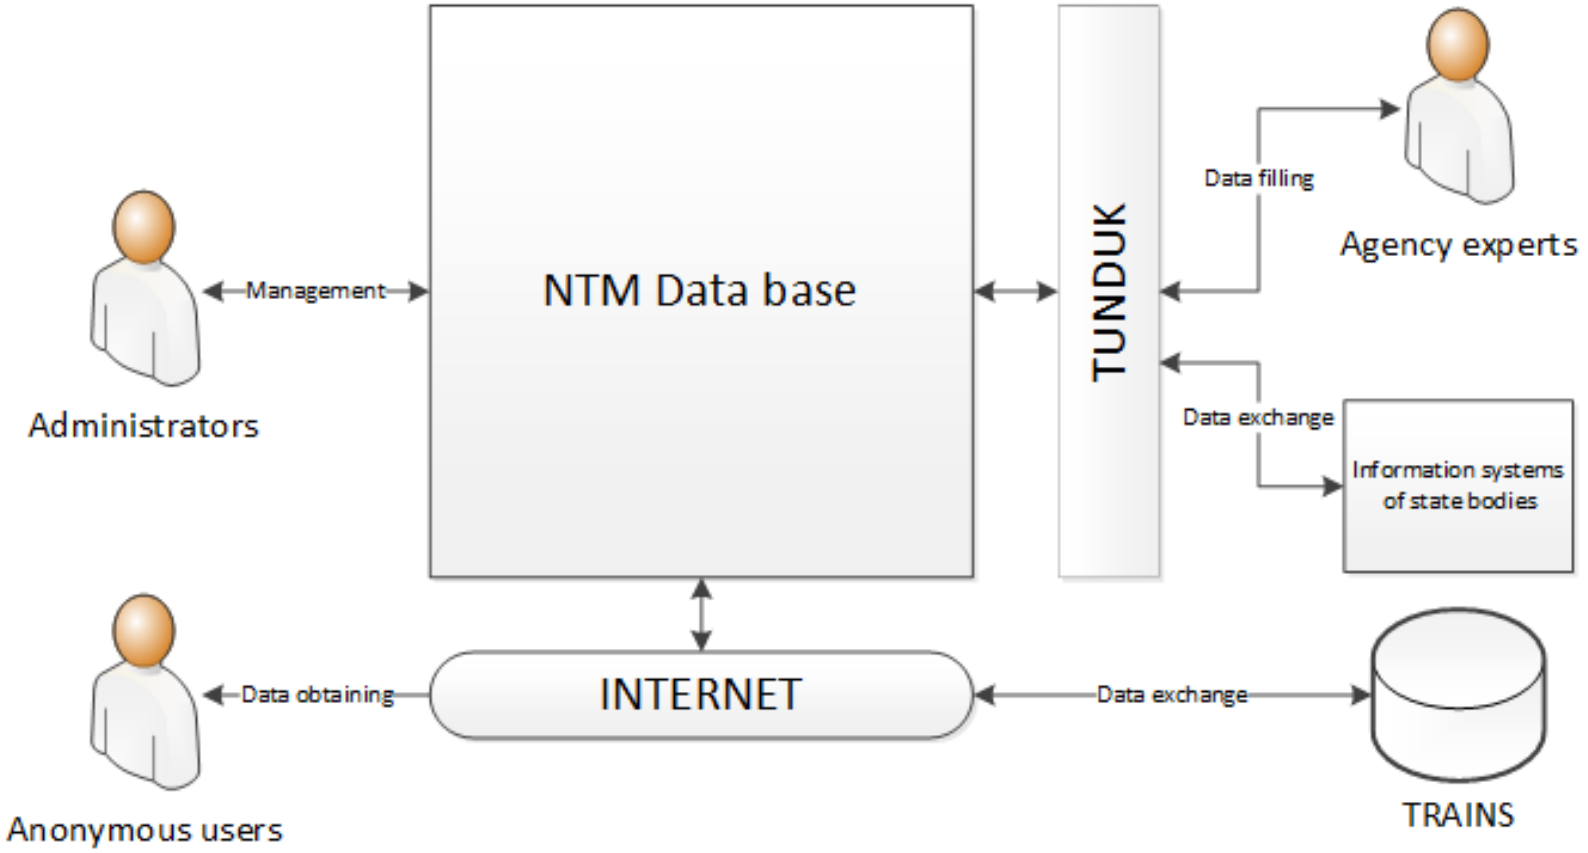
Existing processes did not meet the needs for medicines and equipment at the peak of the pandemic, which led to the self-delivery by citizens and businesses.

Cooperation with UNCTAD

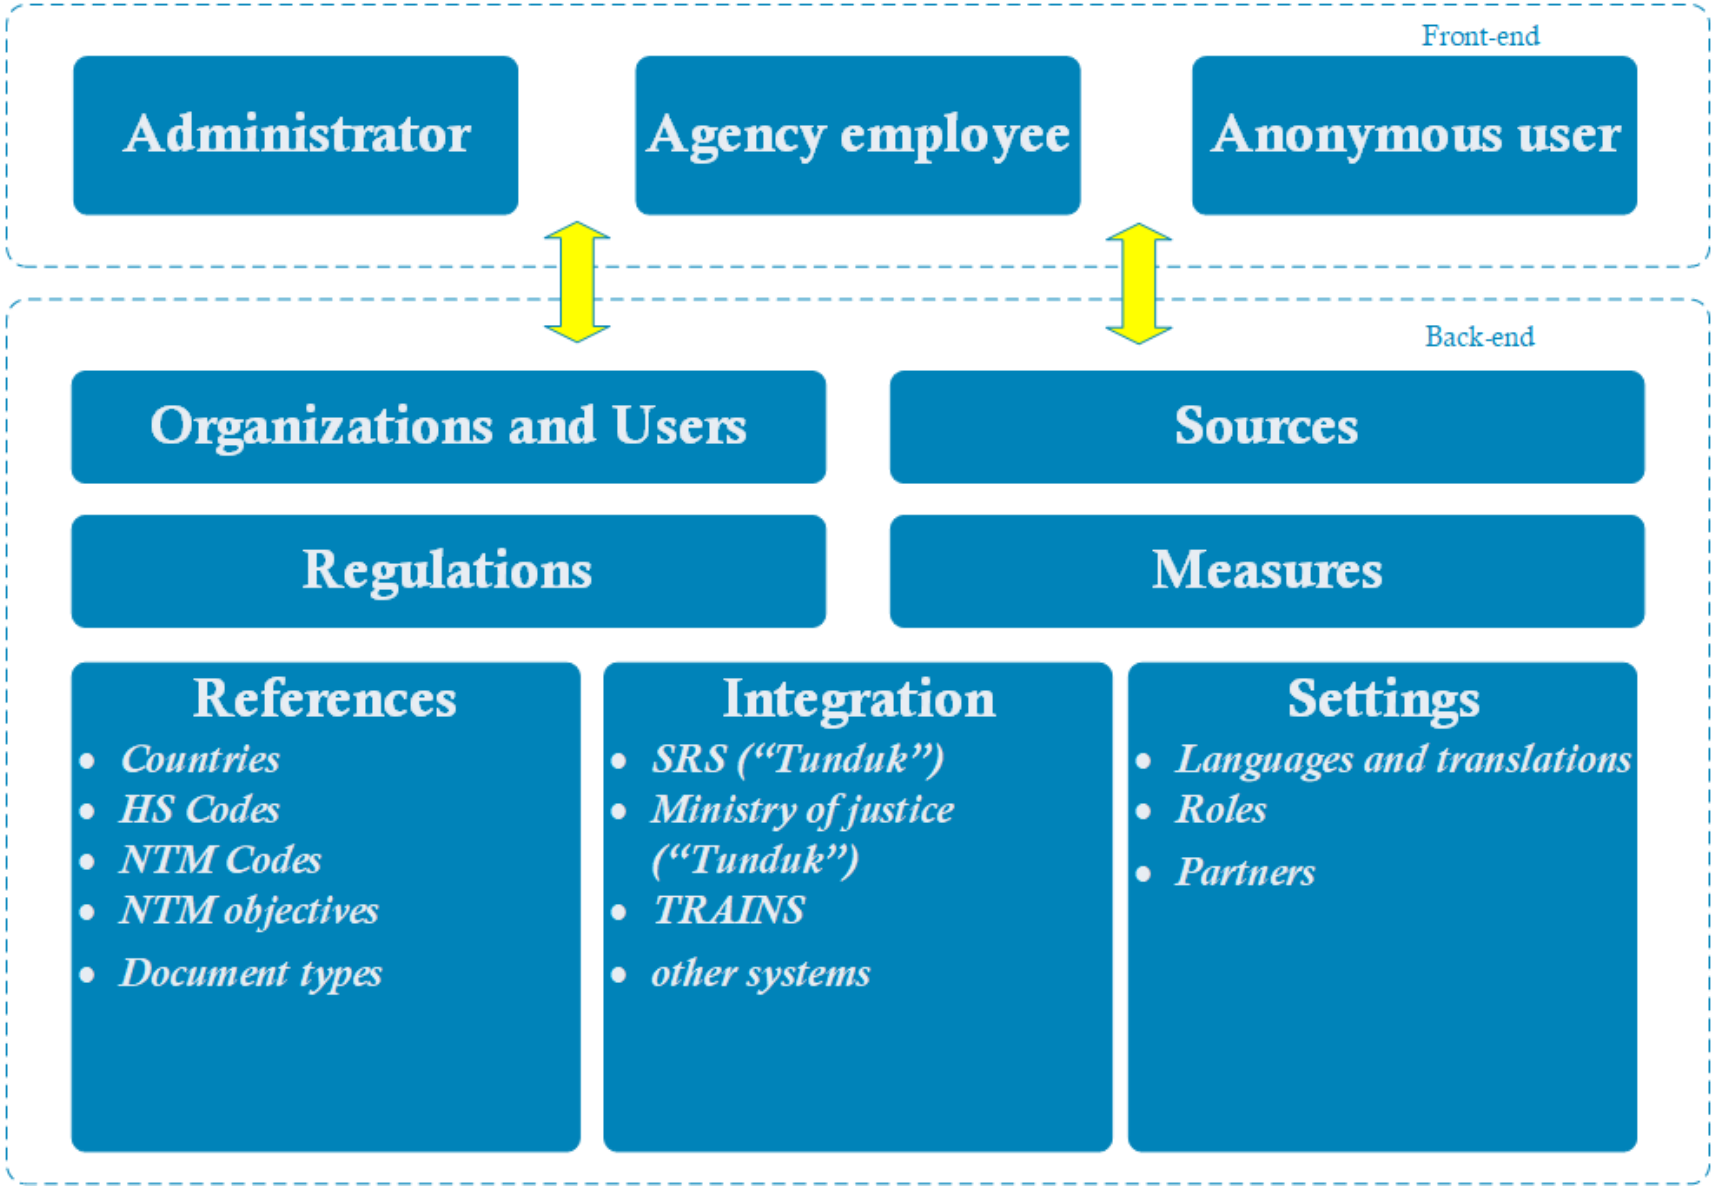


- UI - User interface, API - Application programming interface

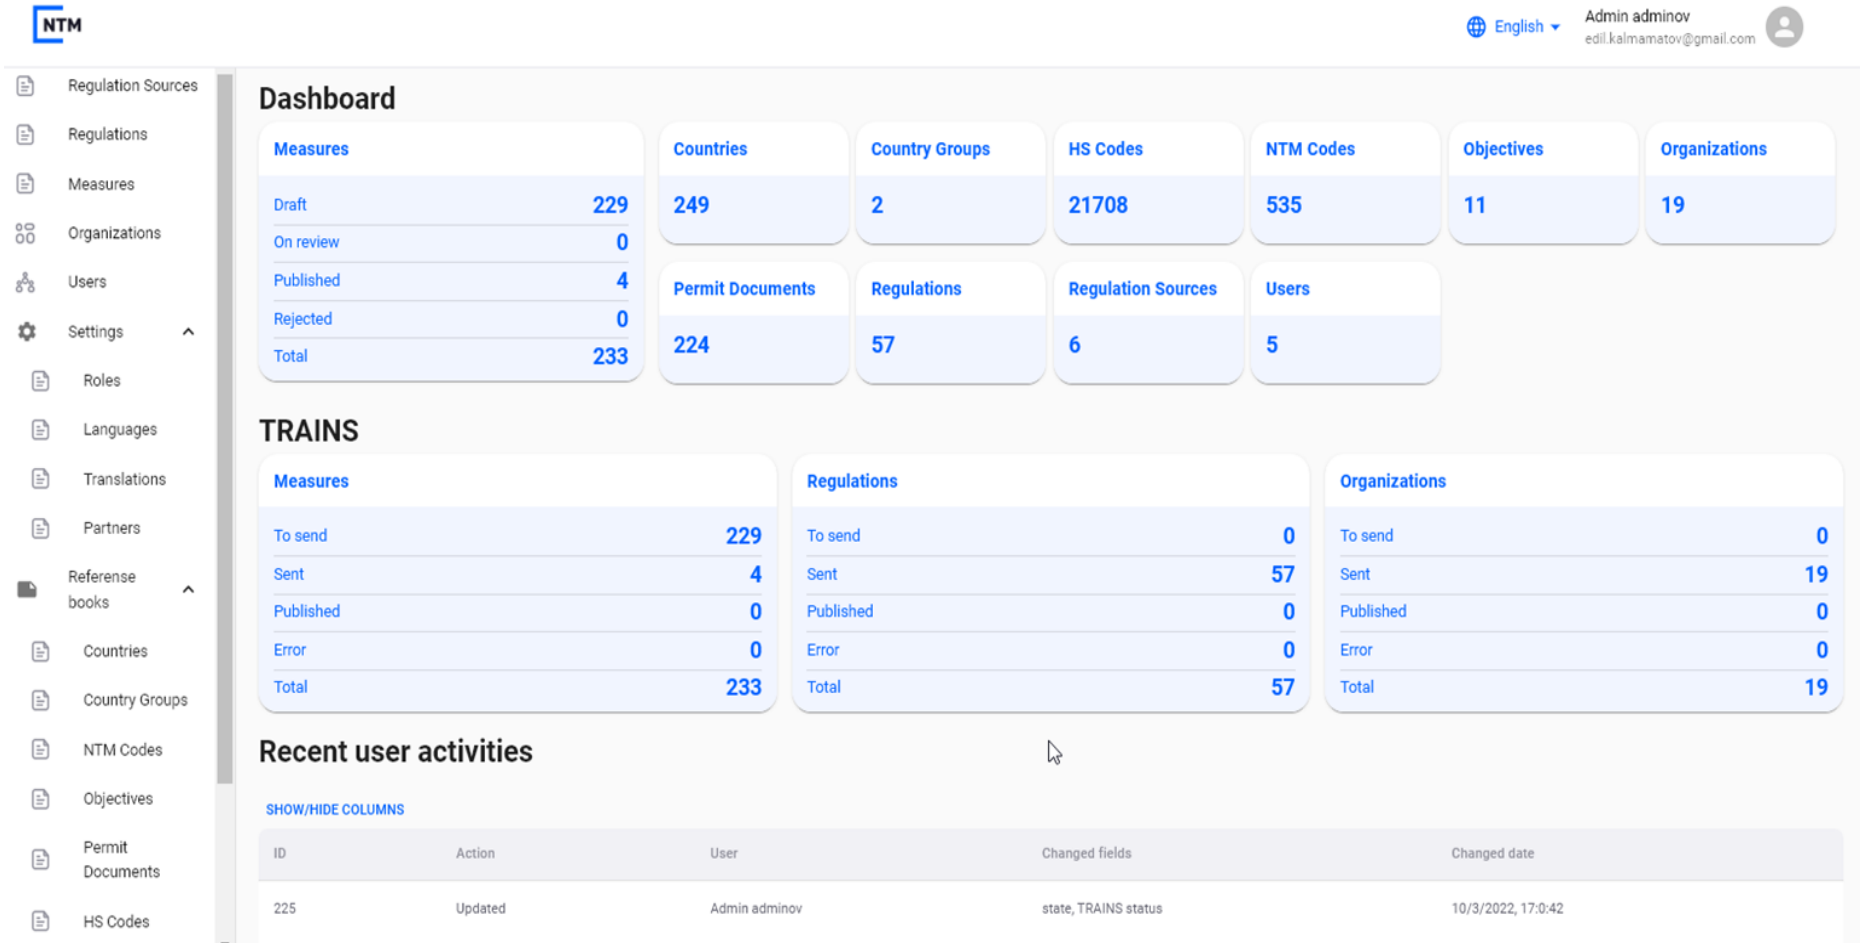
Architecture of the NTM system



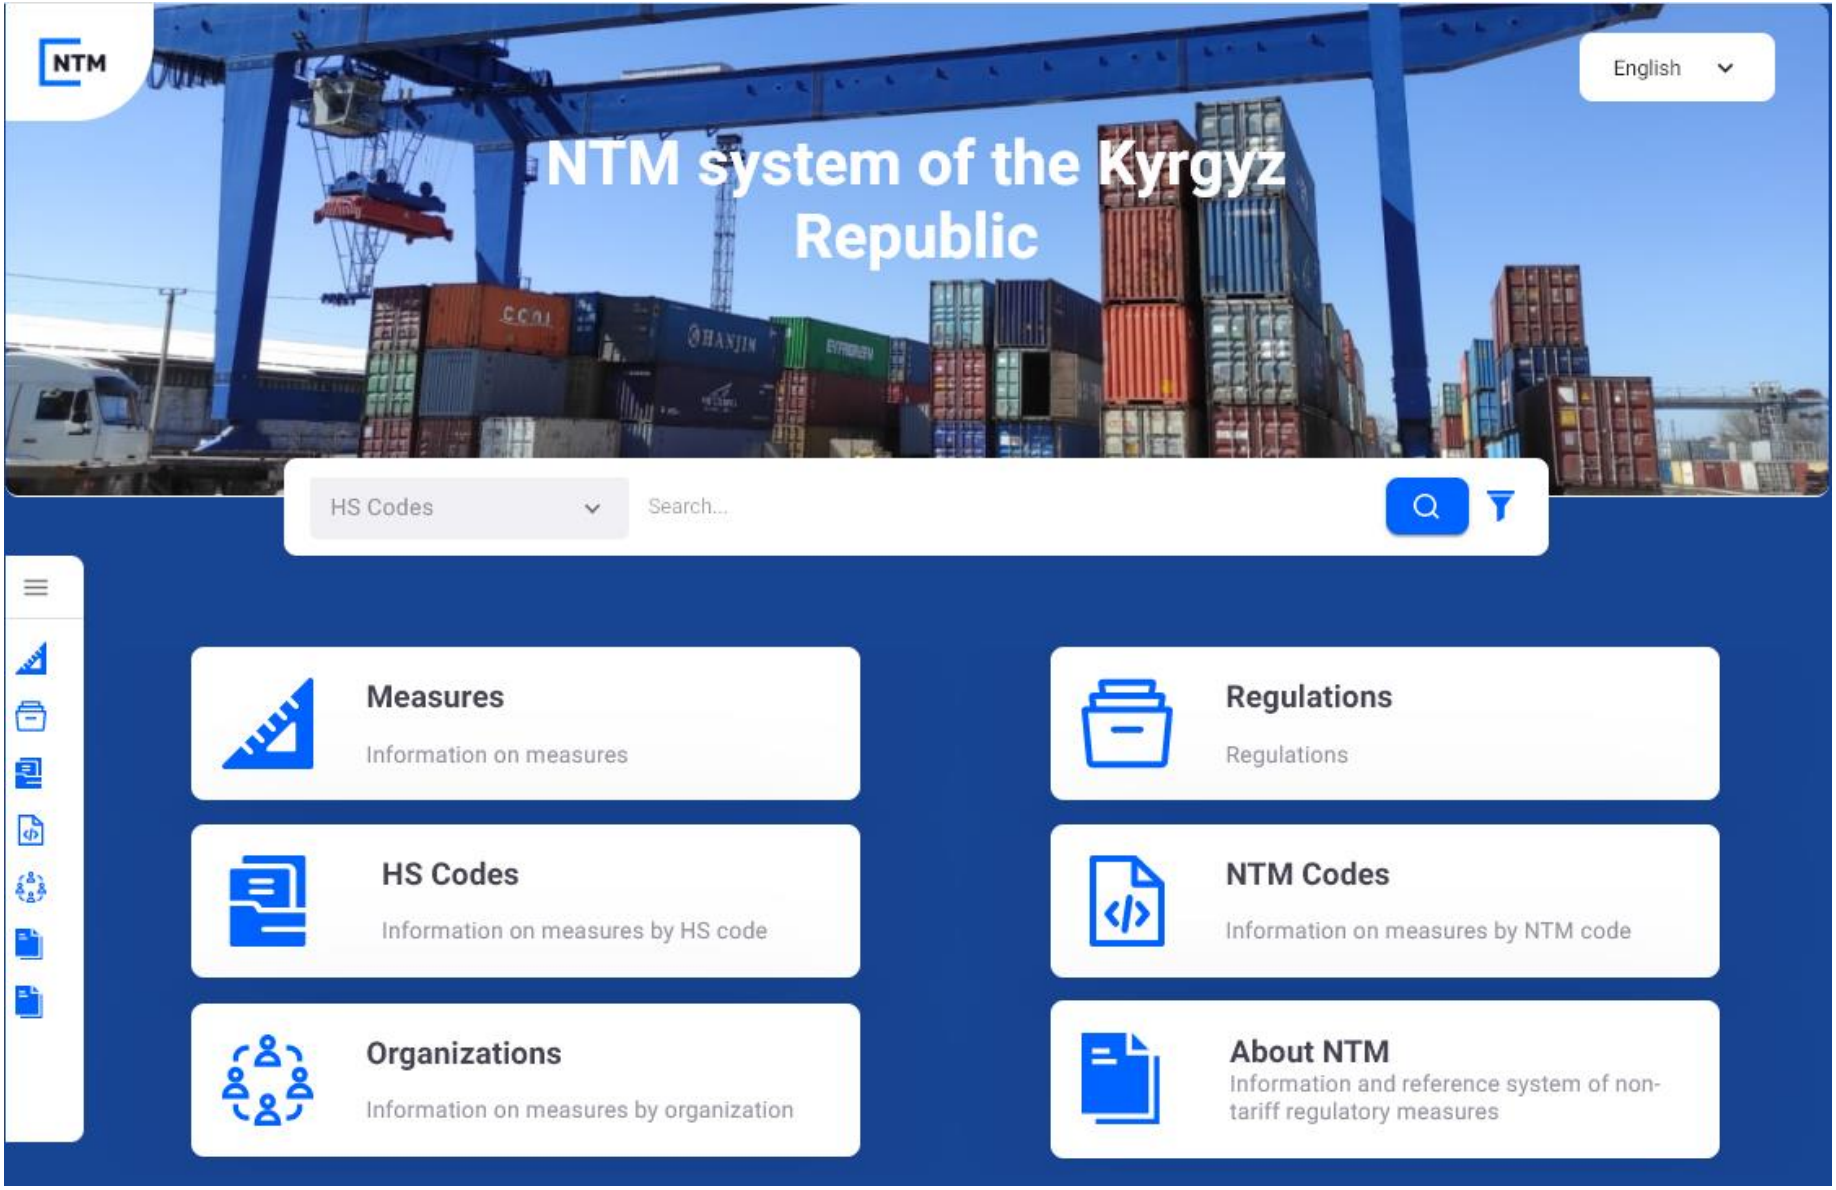
System components



User interface (registered)



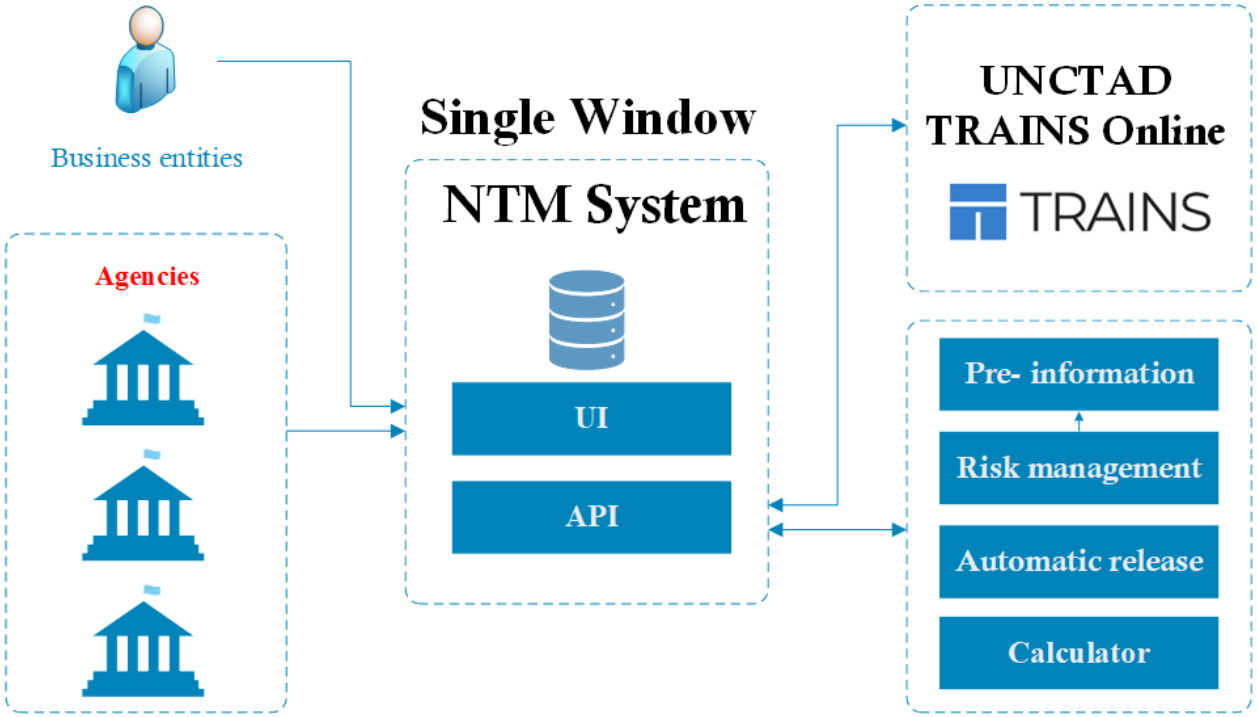
Public site (anonymous)



Implementation of the NTM

Development of the NTM system has been completed and it is able to carry out the following functions:

I. Data source on NTMs for government bodies and stakeholders
II. Integration with the international TRAINS database and data updating
III. Inform traders about existing measures in Kyrgyzstan and other countries.



Further Development Plans

Updating the NTM database

Obtaining data for other countries from the TRAINS database

Development of learning portal (system) according to the UNCTAD NTM classification methodology

Thank you!
