UNCTAD

Briefing to UNEN on UNCTAD's Productive Capacities Index (PCI)

Mussie Deleegn
Chief, LLDCs' Section
Division for Africa, Least Developed Countries and
Special Programmes, UNCTAD
24 March 2021, Geneva-New York-..... (Virtual)

Outline of the presentation:-

- I. What do we mean by productive capacities?
- II. What is the PCI and what does it indicate?
- III. PCI categories, results and gaps between country groups
- IV. Some findings and key challenges
- V. Conclusions with policy implications

Please visit: <https://pci.unctad.org> for all the resources on the index

I. Conceptually, Productive Capacities....

Productive capacities are

the productive
resources

entrepreneurial
capabilities

and production
linkages...

which determine a country's
capacity to produce goods and
services

Building productive capacity can lead to structural transformation and economic diversification, with real knock-on effects on employment, inclusive growth, resource efficiency and environmental sustainability.

UNITED NATIONS
UNCTAD

.... What is the PCI and what does it indicate?

The PCI is a multidimensional composite index (8 categories and 46 indicators)

It helps to

- Measure and benchmark economywide productive capacities;
- Assess the degree of structural economic transformation;
- Identify gaps and limitations in each of the 193 economies; and
- Therefore:-
 - The Index is a tool to guide evidence-based policy formulation and implementation;
 - It is designed to place productive capacities at the center of domestic policies and global partnerships; and
 - It enables to track socioeconomic progress or lack thereof.

UNCTAD's Productive Capacities Index (PCI) is a new diagnostic tool to inform development policy choices

**UNITED NATIONS
UNCTAD**

III. PCI Categories, results and gaps between country groups

Results: Developed Countries, Other Developing Countries, SIDS, LDCs and LLDCs

UNCTAD's Productive Capacities Index

Human
Capital

(b) Gaps between county groups in human capital

ICT

(d) Gaps in ICT: Access and infrastructure

.....What are the key findings.....?
PCI is a barometer of socioeconomic progress.....

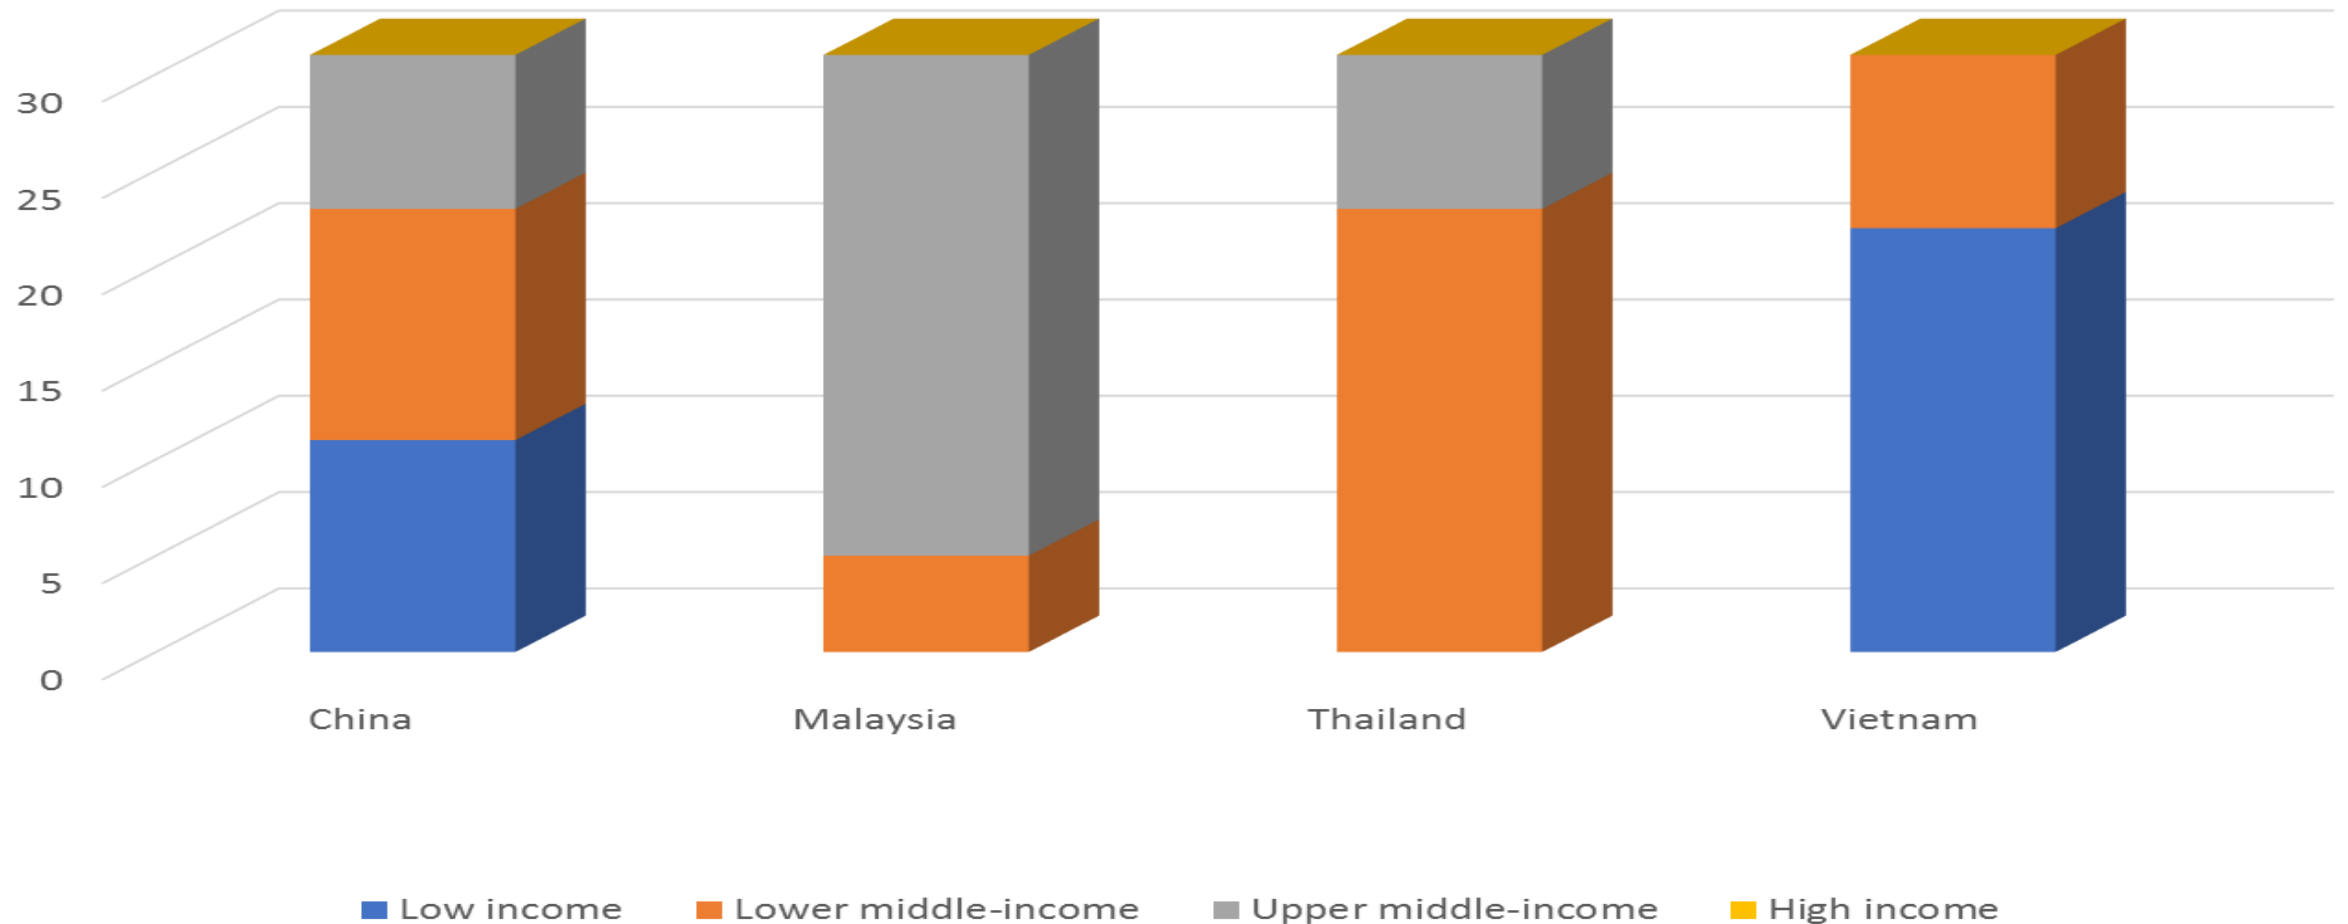

a. Very strong positive correlation between PCI and GDP per capita ($R=0.91$)

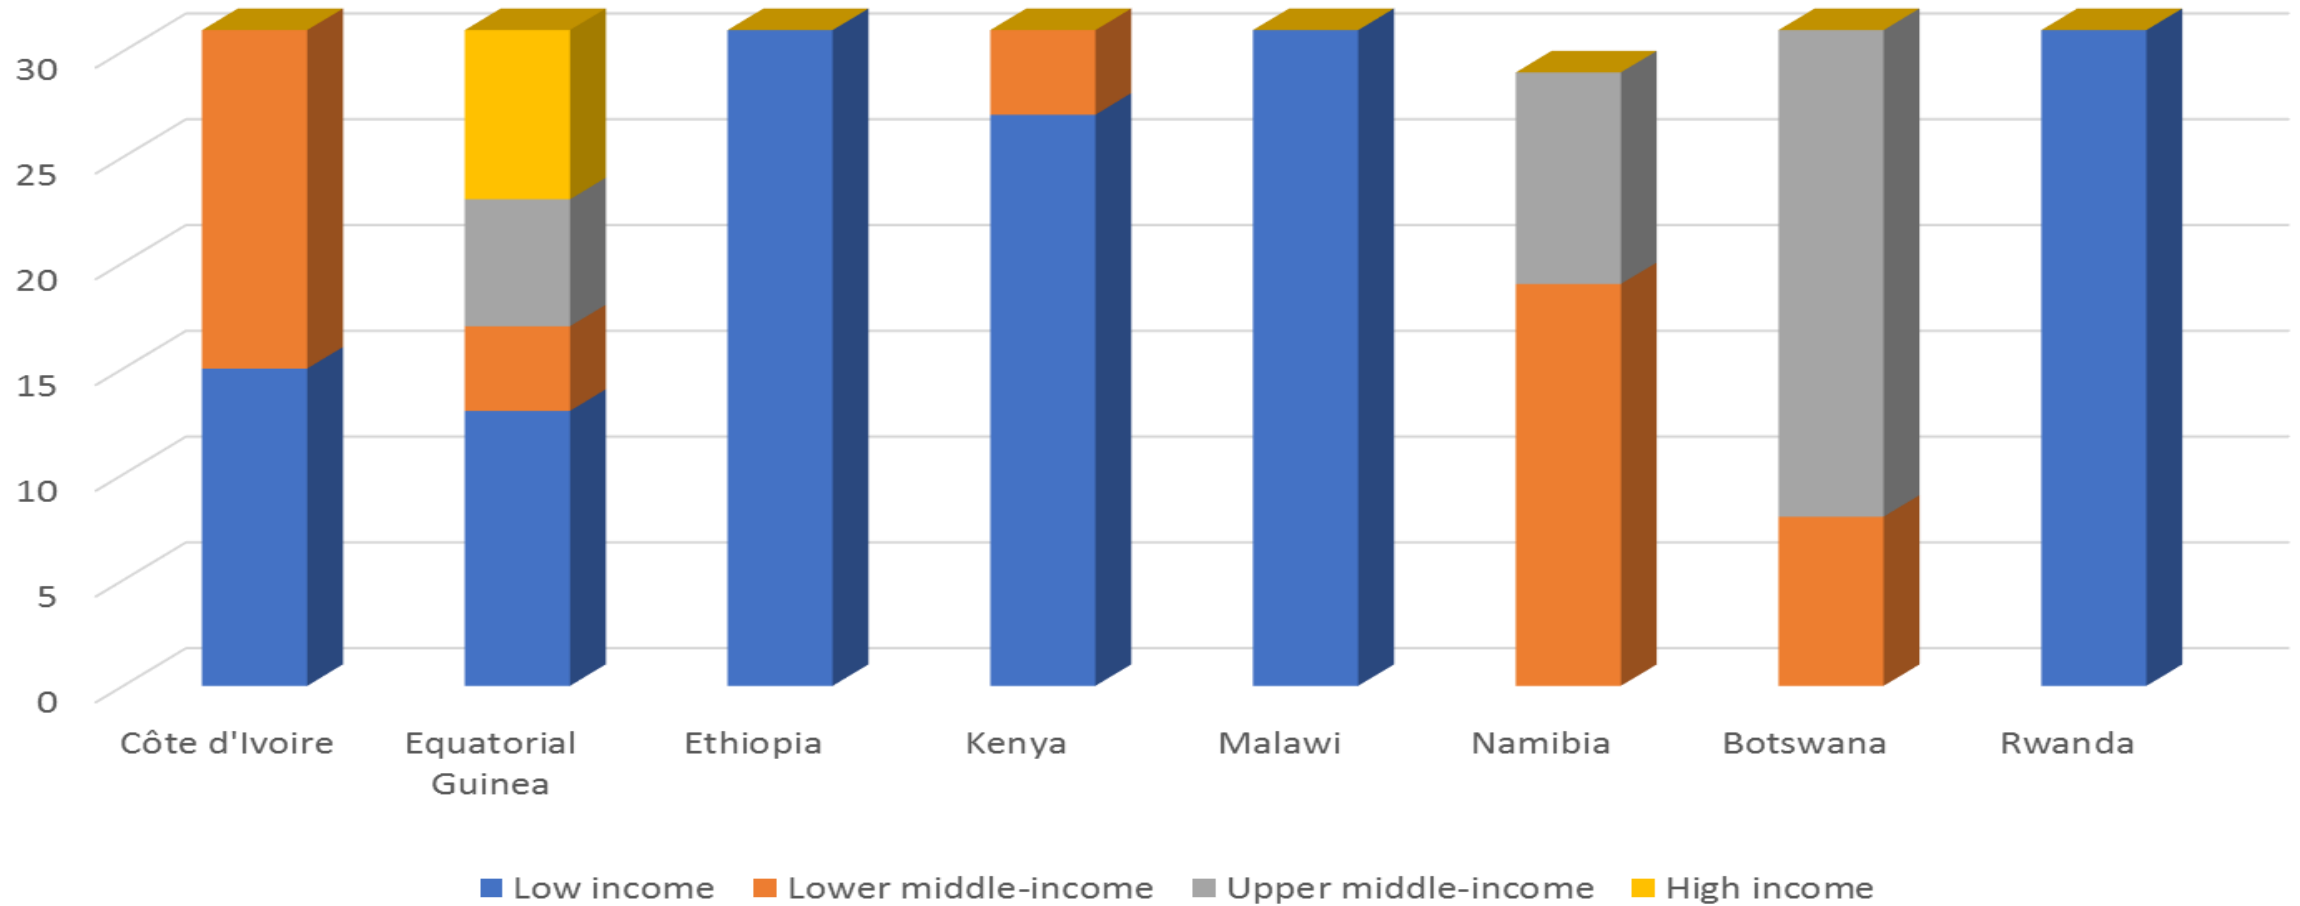

b. Very strong positive correlation between the PCI and HDI ($R=0.92$)

c. Countries with high PCI managed to quickly break income traps: (The case of selected Asian countries: 1987 to 2017)

...The case of selected Africa countries (1987-2017)

.....Some challenges in developing the PCI

- **Data related challenges.....**

- ✓ Paucity, reliability or accuracy of data
- ✓ Data inconsistency: When data is available it is not consistent overtime or internationally comparable;
- ✓ What we observed (in weaker economies) can be described as “statistical tragedy”;

- **Time and financial resources**

- ✓ 4 years and reviews need resources

- **Indicators-related challenges**

- ✓ A choice of a given indicator over another: Why is a particular indicator used? Is that the only indicator available?

- **Heterogeneity of countries and variation in key binding constraints**

- ✓ The PCI shows the level of country-specific capabilities, but it does not provide a blueprint on how to foster such capabilities.

V. Concluding remarks

The PCI is:

- ✓ **multidimensional, capturing** key factors influencing development trajectories of countries;
- ✓ **consistent with empirical and historical conclusions:** “No nation has ever developed without fostering productive capacities and structural economic transformation”;

The PCI also argues for a paradigm shift in development policies that

- “**new generation policies**” are urgently needed b/c existing “**commodity-driven**” **growth model** failed to deliver promises;
- Productive capacities must **be placed at the center** of domestic and global development policies as well as partnerships.
