Special Programmes (ALDC)  
UNCTAD**

# National Policy-level Workshop on Fostering Productive Capacities for Industrialization, Export Diversification, and Inclusive Growth in Ethiopia

**Mussie Deleegn  
Officer-in-Charge, Productive Capacities Branch  
Division for Africa, Least Developed Countries and  
Special Programmes, UNCTAD  
3-4 March 2022, Addis Ababa, Ethiopia**

# Outline of the presentation:-

- I. Mapping and measuring Productive Capacities
- II. What are our key findings (lessons) from the PCI
- III. Concluding remarks
- IV. Policy implications of the PCI scores

Please visit: <http://pci.unctad.org> or <http://unctadstat.pci.unctad.org> for all the resources and data on the PCI.

❖ For a methodological Approach and Results: Please consult the booklet

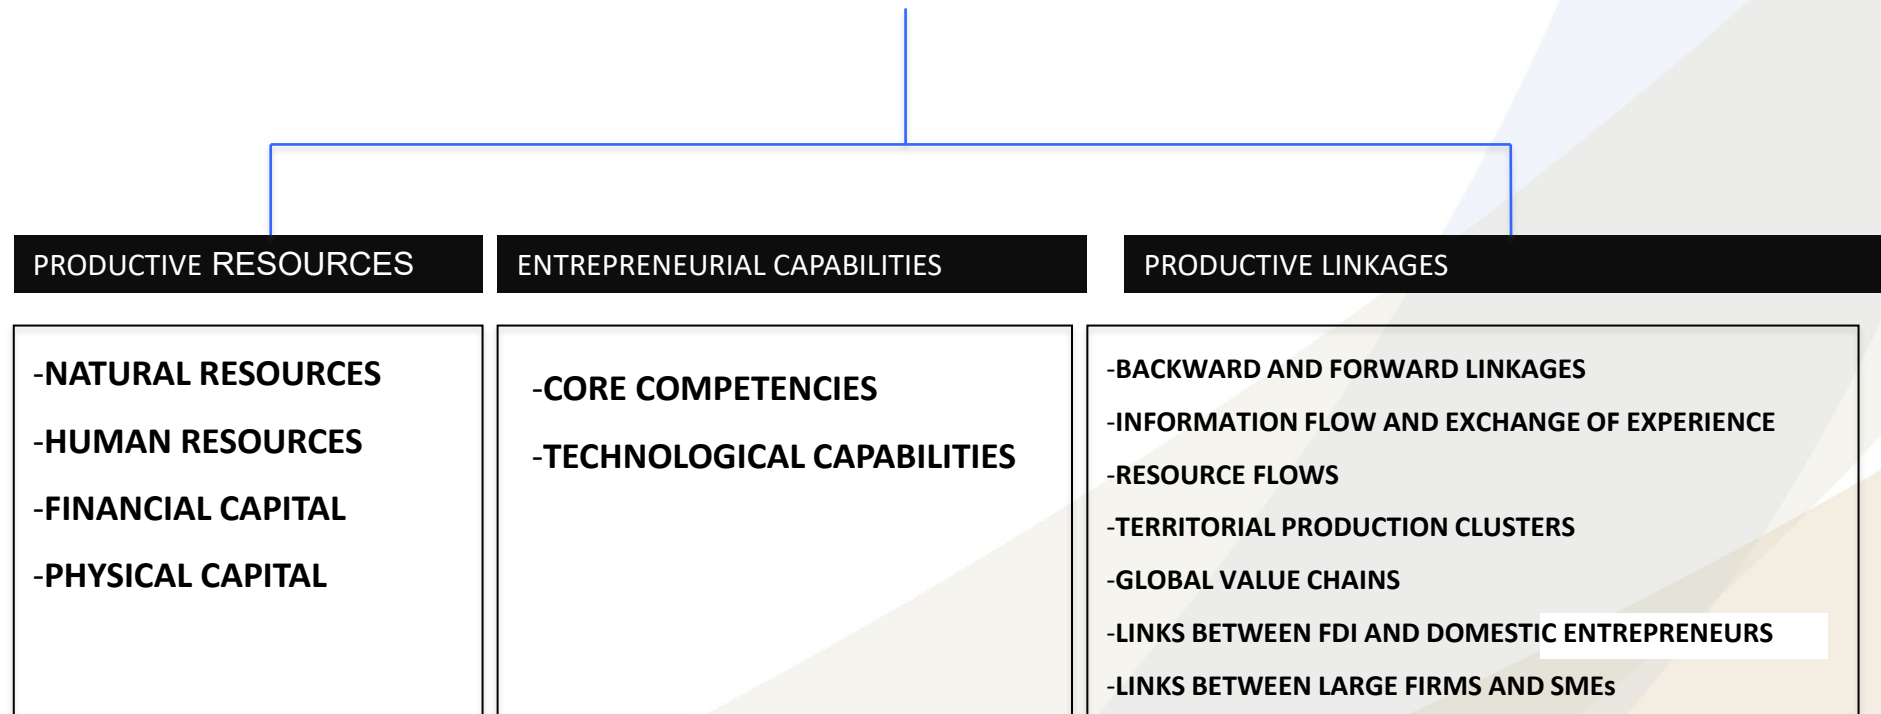

UNCTAD's Productive Capacities Index (PCI) is a new diagnostic tool to inform development policy choices

UNITED NATIONS  
UNCTAD

# I. Mapping and Measuring Productive Capacities: Productive Capacities Index

(a country's ability to produce high value-added goods and services efficiently and competitively)

# ..... 8 Categories of productive capacities

# Number of indicators used across 8 categories

1. Energy (6 indicators)
2. Human Capital (6 indicators)
3. ICTs ( 5 indicators)
4. Institutions (6 indicators)
5. Natural Capital (5 indicators)
6. Private Sector (9 indicators)
7. Structural Change (4 indicators)
8. Transport (5)

**Total Indicators used: 46**

**Economies measured: 193**

# III. What did we find or learn from the PCI? (6 Key findings)

# Where does Africa stand vis-a-vis other developing regions?

Mussie Deleegn

# Low Productive capacities means low per capita GDP

Correlation between the Productive Capacities Index and Gross Domestic Product per Capita, 2018

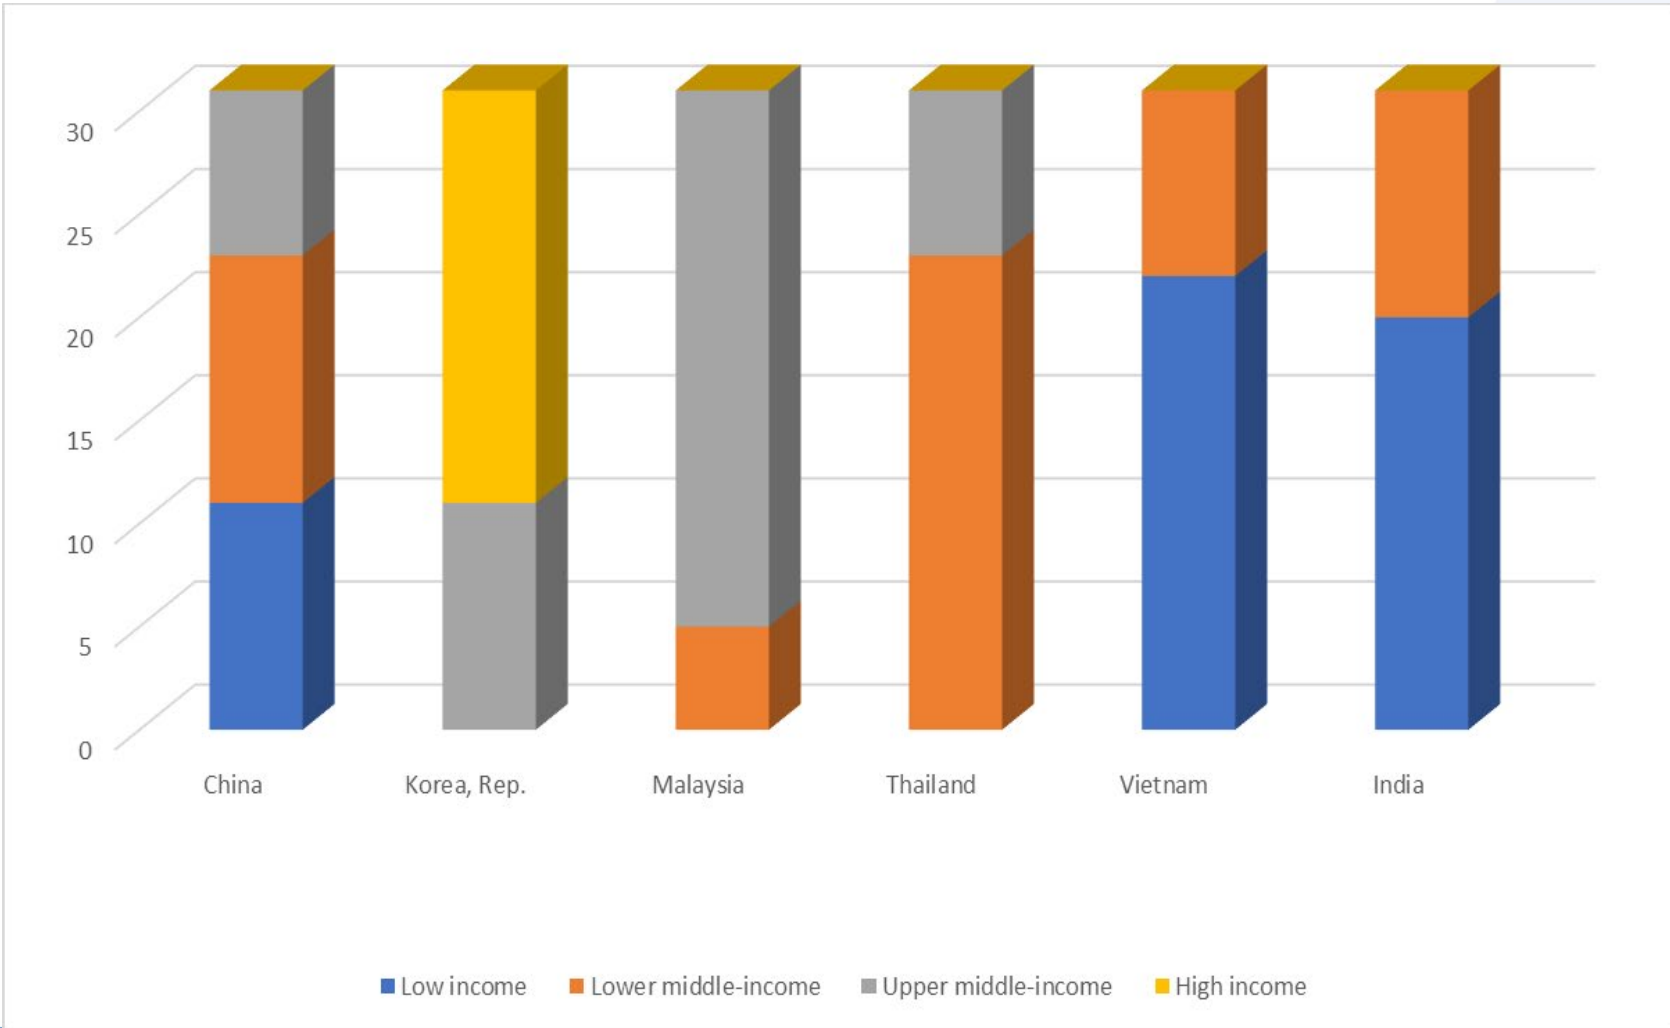

$\rho = 0.91$

# ...Weak productive capacities and human capital....

# Breaking the low-middle-income traps: Asian countries

# .... Africa countries (1987-2017)

# Higher PCI scores imply higher manufacturing value added

Manufacturing, value added (current US\$)

# Low PCI score means low share of manufacturing value add in GDP (%)

# IV. Concluding remarks

The PCI is:

- ✓ **a multidimensional, capturing** key drivers and enablers of development;
- ✓ an **interconnected puzzle** (improvements in one category positively influence in others);
- ✓ **consistent with empirical and historical conclusions**: “No nation has ever developed without fostering productive capacities and structural economic transformation”;
- ✓ shows **gaps and limitations** in productive capacities within and between economies;
- ✓ a tool to place productive capacities at the center of policies and strategies;
- springboard for “**new generation policies**” b/c existing **development model** failed to deliver promises of inclusive and sustainable growth.

# V. Main policy implications of the PCI.....

- By using the PCI, UNCTAD has developed diagnostic tool-NPCGA.
- NPCGA is tailored to specific development needs of countries.
- It is designed to:
  - ✓ undertake an in-depth assessment of socioeconomic performances;
  - ✓ identify comparative advantages & binding constraints;
  - ✓ provide concrete & data-driven recommendations;
  - ✓ assist to formulate and implement evidence-based policies;
  - ✓ enhance the application of 8 categories of the PCI; and
  - ✓ re-orient domestic policies towards achieving “quality” growth
