

Market Transparency Tools for Economic Development

**Warwick Lagon, Port Vila, Vanuatu
6 November 2017**

**Maria V. Sokolova
UNCTAD/DITC**

Market Transparency

- ...is a key component to traceability of products
- ...reduces transaction costs for business and government
- ...reduces the impact of food prices shocks and panicks
- ...improves the supply chain governance
- ...allows for analysis and forecasts
- ...
- And more.

Market Information System (MIS)

- ... is a repository of strategic market information
 - By different level in the production chain
 - Coverage can include prices, costs, stocks, quantities
 - Can cover all inputs
- ... contains information on the key players (stakeholders) that participate
- ... produces reports and analytics for different purposes

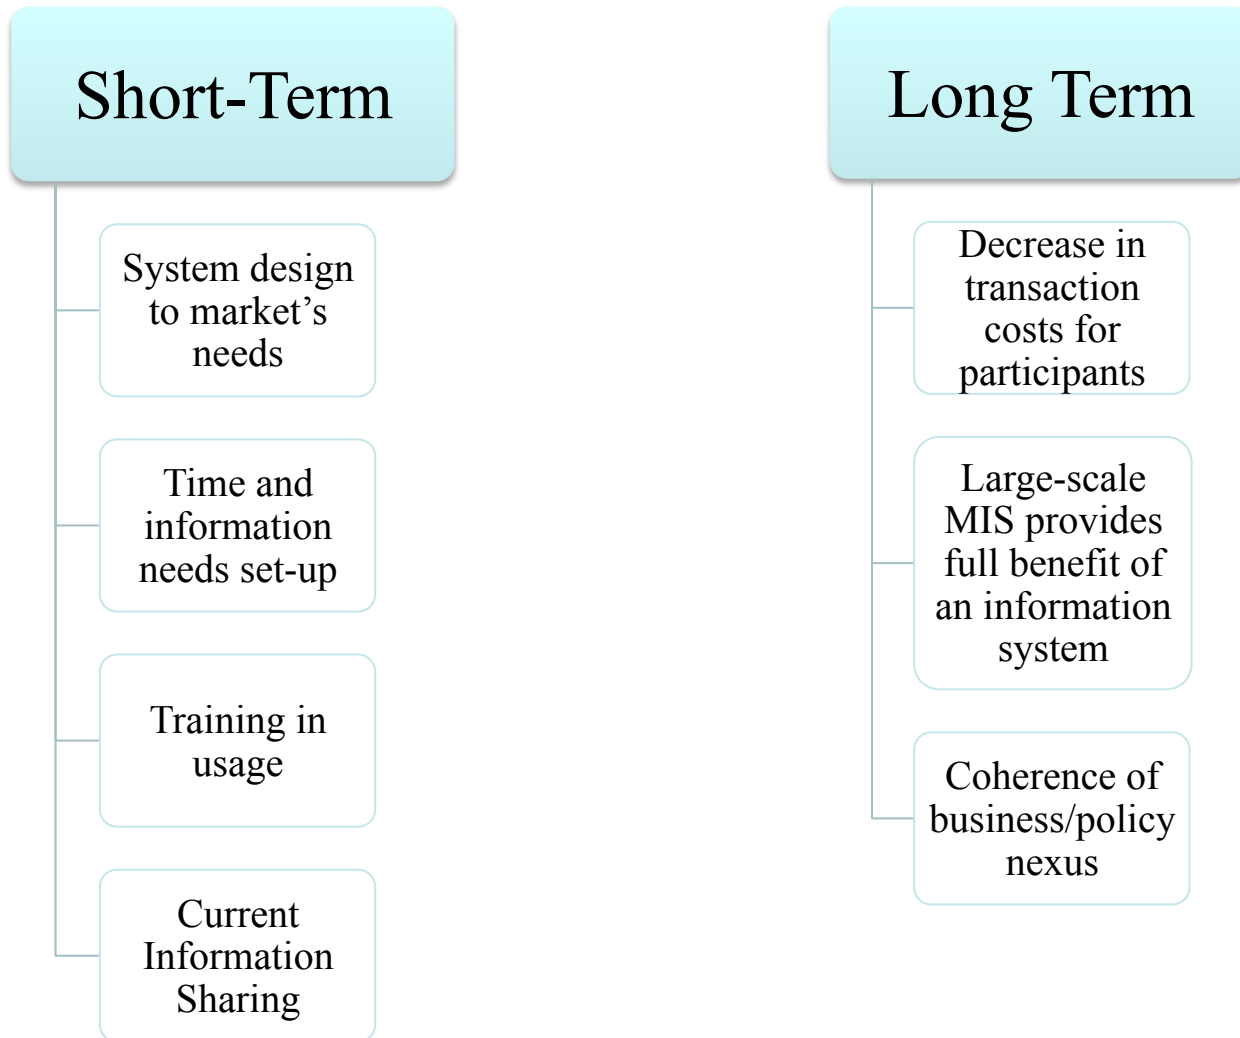

International Experience on MIS

- EU sets up Market Observatories on the basis of their market monitoring system
- Infotrade Market Information Services (Uganda)
- AMITSA (Agricultural Input Market Information and Transparency System) has been developed into the regional network in East Africa
- Jamaican Jamis produces weekly reports to all subscribers

Challenges and Benefits of MIS

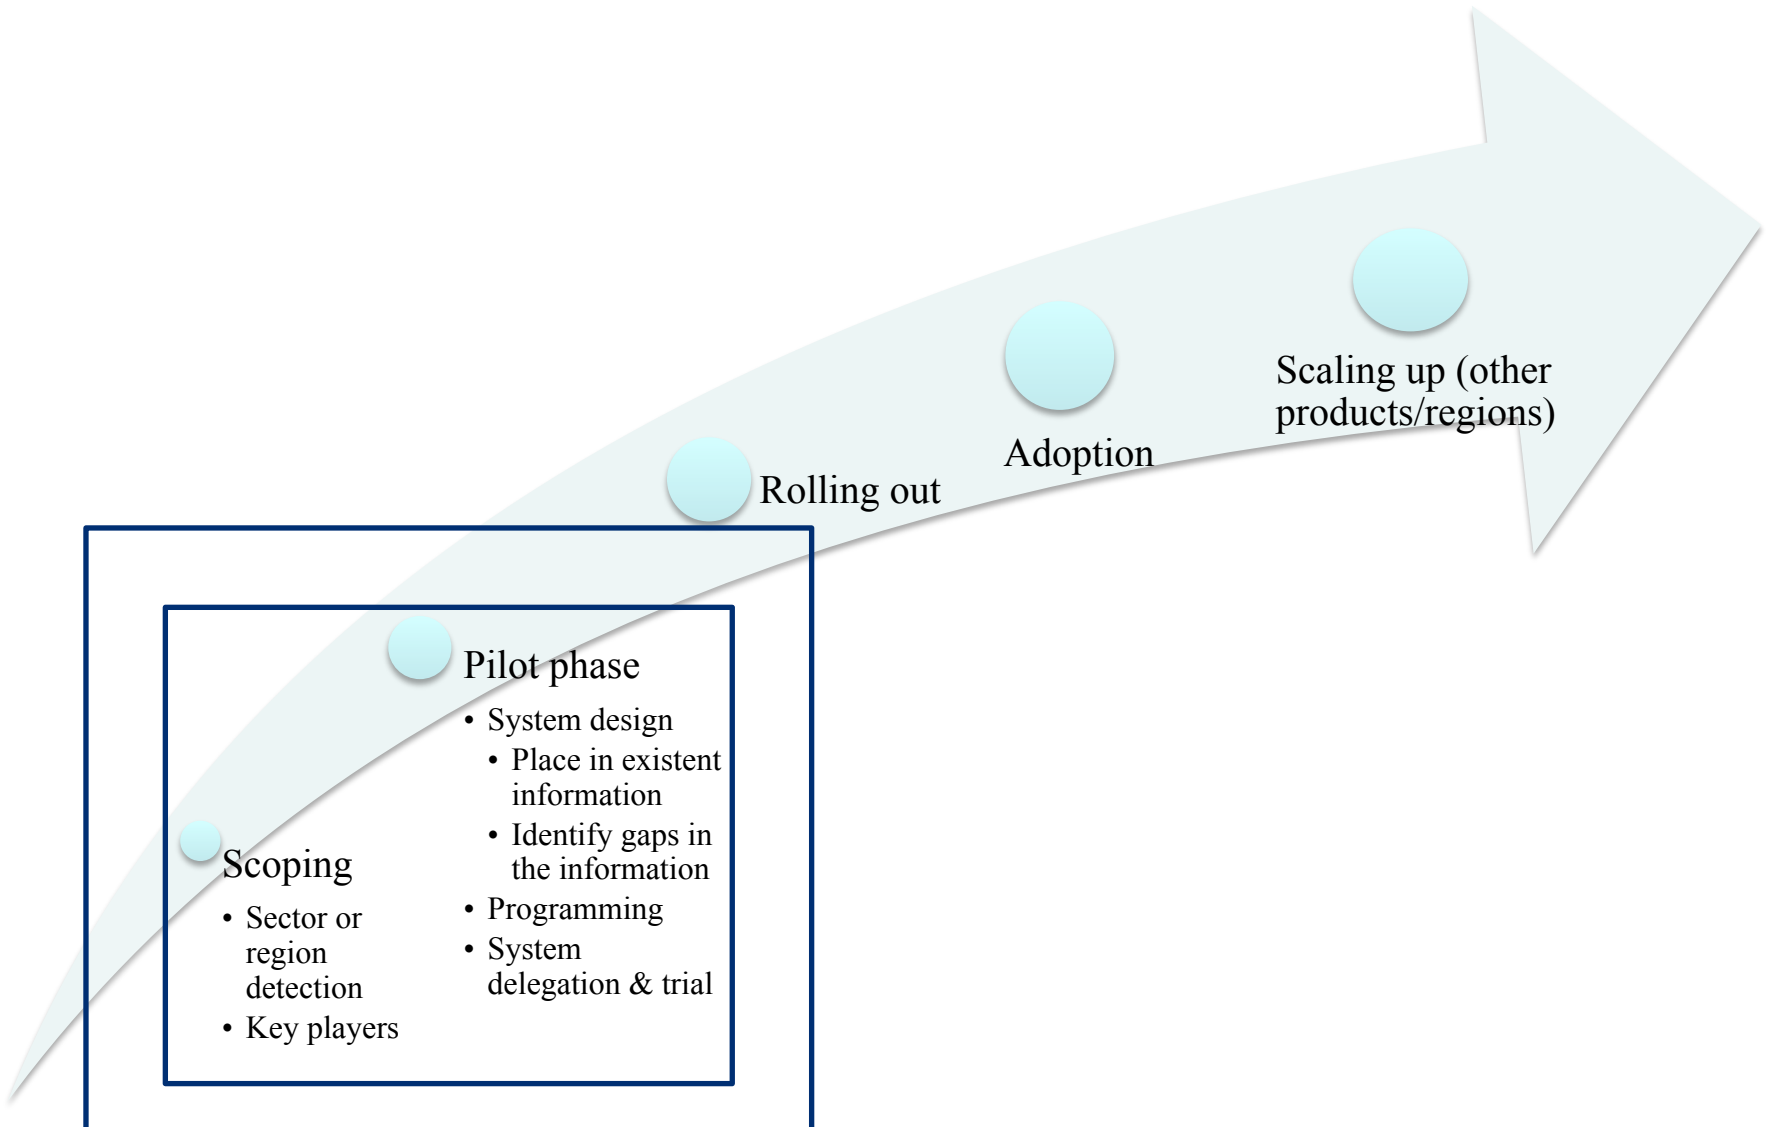

Timeline for setting up MIS

Timeline for setting up MIS

Inception phase: UNCTAD pilot MIS

“[Overall there are]...as many marketing systems as there are countries and it is therefore not possible to specify a “model” MIS”

[FAO](#), MIS Guidelines

- Research on the setting of MIS is needed:
 - Specificity of the country’s needs
 - Specificity of links and information
- Ultimate result:
 - More sustainable system
 - Higher efficiency for the end-users
 - Easier to “explain” to the end users (->higher coverage)

Timeline for setting up MIS

Implementation phase: Keeping MIS in action

- Timely feeding in of the new information
- Staying up to date technologically
- Adjustment to market changes
- Clear administration structure of data inputs (roles)

In practice, the most successful cases are in public-private (or NGO) combinations

Tomorrow

- Introduction and Guide to Market Directory
 - Based on cocoa and coconut sectors
 - Can be easily replicated in other sectors
- Scoping the Market Repository
 - Functionality of the shell
 - Data needs/benefits
 - Model cases for further implementation
