Ad Hoc Expert Meeting on

#### Climate Change Adaptation for International Transport: Preparing for the Future

16 to 17 April 2019

## Evidence based approach to holistic risk analysis

Presentation by

#### Simon Hodgkinson

Research Fellow University of Birmingham

This expert paper is reproduced by the UNCTAD secretariat in the form and language in which it has been received. The views expressed are those of the author and do not necessarily reflect the views of the UNCTAD.

# Evidence based approach to holistic risk analysis

Simon Hodgkinson University of Birmingham

Ad Hoc Expert Meeting Climate Change Adaptation for International Transport: Preparing for the Future 16-17 April 2019

#### Risk = f(Hazard, Vulnerability, Consequence)

۱ 🏈

	A Better, Safer Railway
Objectives Identify Hazards Identify Uninerabilities Identify Identify Uninerabilities Identify	<ul> <li>How is the UK climate and weather going to change in the future?</li> <li>What are the impacts of climate change and extreme weather going to be on the GB railway?</li> <li>What is being done already or can be done about the impacts of climate change and extreme weather?</li> <li>How can we evaluate the cost and benefits of dealing with impacts of climate change and extreme weather?</li> </ul>
Ad Hoc Expert Meeting Climate Change Adaptation for International Transport: Preparing for the Future 16-17 April 2019	BCRRE UNIVERSITY OF BIRMINGHAM

#### Consequence

What is the purpose of a railway?

Who are the users and stakeholders?

- Passenger / Freight mobility
- Economic and Social activity
- Environmental mitigation (modal shift)
- It provides a service...
- ...which can sometimes fail (risk)
- Investment / maintenance / renewal / repair activities are justified by mitigating risk

#### Key metrics in modern rail

- **Public Performance** • Measure (PPM)
- % of trains arriving • "On Time"
- Trains are punctual if • they are  $\leq 5$  mins late for short-distance and ≤10 mins late for long-distance

Ad Hoc Expert Meeting

16-17 April 2019

- Cancellations and • Significant Lateness (CaSL)
- % of trains which • arrive at final destination > 30 mins from planned arrival, or full/part cancelled or missed calls

Ad Hoc Expert Meeting Climate Change Adaptation for International Transport: Preparing for the Future 16-17 April 2019

- Delay minutes (and thus PPM/CaSL)
  - Excludes 'severe' weather

"no reasonable or viable economic mitigation was possible against the impact of the weather" (DAB 2014)

- Calculated verses a daily timetable
- Poor links to infrastructure condition or cause
- Therefore not a basis on which to make adaptation (i.e. investment) decisions
- "Past performance is not indicative of future results"

Ad Hoc Expert Meeting Climate Change Adaptation for International Transport: Preparing for the Future 16-17 April 2019

### ...but it must be lived forwards

- What is required:
  - basis for adaptation decision making
  - scalability across the industry
    - local identification of 'critical'
    - strategic choices about service
    - next week to next century
  - inclusive of different/external stakeholders and interdependencies...

Ad Hoc Expert Meeting Climate Change Adaptation for International Transport: Preparing for the Future 16-17 April 2019

UNIVERSITY

BIRMINGHAM

BCRRE

#### Network Criticality

- Identify location-based single points of failure – formalise priority locations with high service performance risk to aid decisionmaking for resource allocation
  - **Regional-scale** assessment relative priorities for management regions at high level of **granularity**
  - Based on **observed fault/disruption** data – captures network **behaviour** (NR TRUST system) through metrics of **asset failure consequence** as delay minutes

UNIVERSITY<sup>OF</sup> BIRMINGHAM

Ad Hoc Expert Meeting Climate Change Adaptation for International Transport: Preparing for the Future 16-17 April 2019

- In this case 'journey (un)availability'
- Probability that a given 'element' of the system will cause N minutes delay
  - 2 minutes / 5 minutes / 20 minutes
  - May be stakeholder specific

BCRRE

- Station to station
- Minute to minute
- "Whole journey" focus
- % of trains arriving to the minute at every station from 'early' through to '30 minutes after' the timetable
- On Time % of station stops where train arrived <1min late</li>
- Cancellations % trains cancelled

BCRRE

BIRMINGHAM

#### Including interdependencies in criticality...

Cross-sector asset information and locations – where are assets and how are they connected?

Cross-sector network

criticality - spatial

Cross-sector consequence metrics – similar fault reporting and service impacts? Where are the system boundaries?

Ad Hoc Expert Meeting Climate Change Adaptation for International Transport: Preparing for the Future 16-17 April 2019

#### The future depends on what you do today

- Poor assumptions:
  - Engineers are representative of general public
  - The future will be just like today (but with extra widgets)
- Future patterns of service use, climate, maintenance, adaptation measures and/or new services / infrastructure can be evaluated with system modelling
