

AI@work – How AI is transforming Industry

Creating the Metaverse of the Industrial World

March 2022

Confidential

industry.**AI**

BLP
Group Company

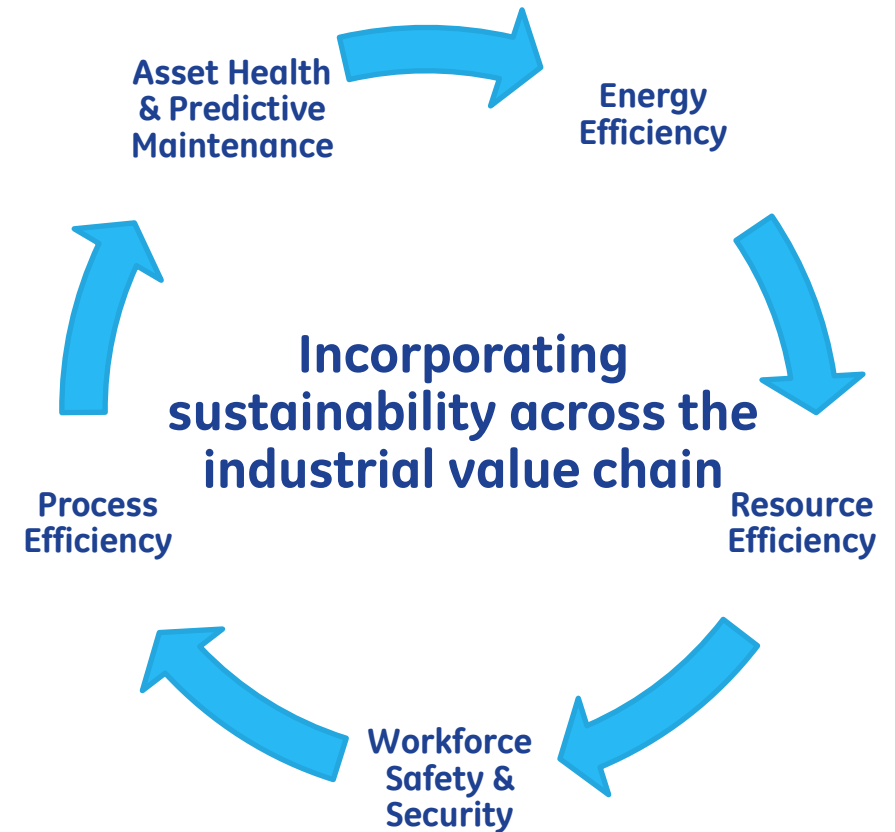

Solving the Sustainability challenge with AI & IoT

industry.**AI**

Sustainable manufacturing – creating a world of manufacturing with no waste

Leveraging AI and Big Data to drive sustainability

Applicable across sectors

Wide domain expertise across industries

industry.**AI**

Renewables

Transportation

Ports & Shipping

Oil & Gas

Manufacturing

FMCG

Aviation

Steel

Automotive

Real Estate

AI can be applied to solve industrial challenges industry.

AI Product suite

Predict.AI - Asset Health & machine performance – wind turbines & solar farms

Track.AI - Supply Chain Optimization and performance monitoring – Train, Trucks, Container

Conserve.AI - Smart Buildings – Healthy Buildings - Increasing the value of buildings

Smart Factory – Reliability & Predictive maintenance

Port.AI - Smart Port – cranes to containers

Spot.AI - Asset Tracking, Inventory Management, & Workforce management – Factories, Warehouse, Buildings

Conserve.AI - Energy Efficiency & Sustainability - Factories & Buildings

Trust.AI - Visual Analytics – Quality, defect detection, Safety, Security

Technology

industry.**AI**

Full-stack Orion platform for real-time connectivity, intelligence, and automation.

Connectivity

Connect people, things & Processes (IoT) – Collect the Data – Data Engineering & Contextualisation

Deep Learning/AI

Real Time Intelligence (AI) –
Develop AI Models –
Analyze

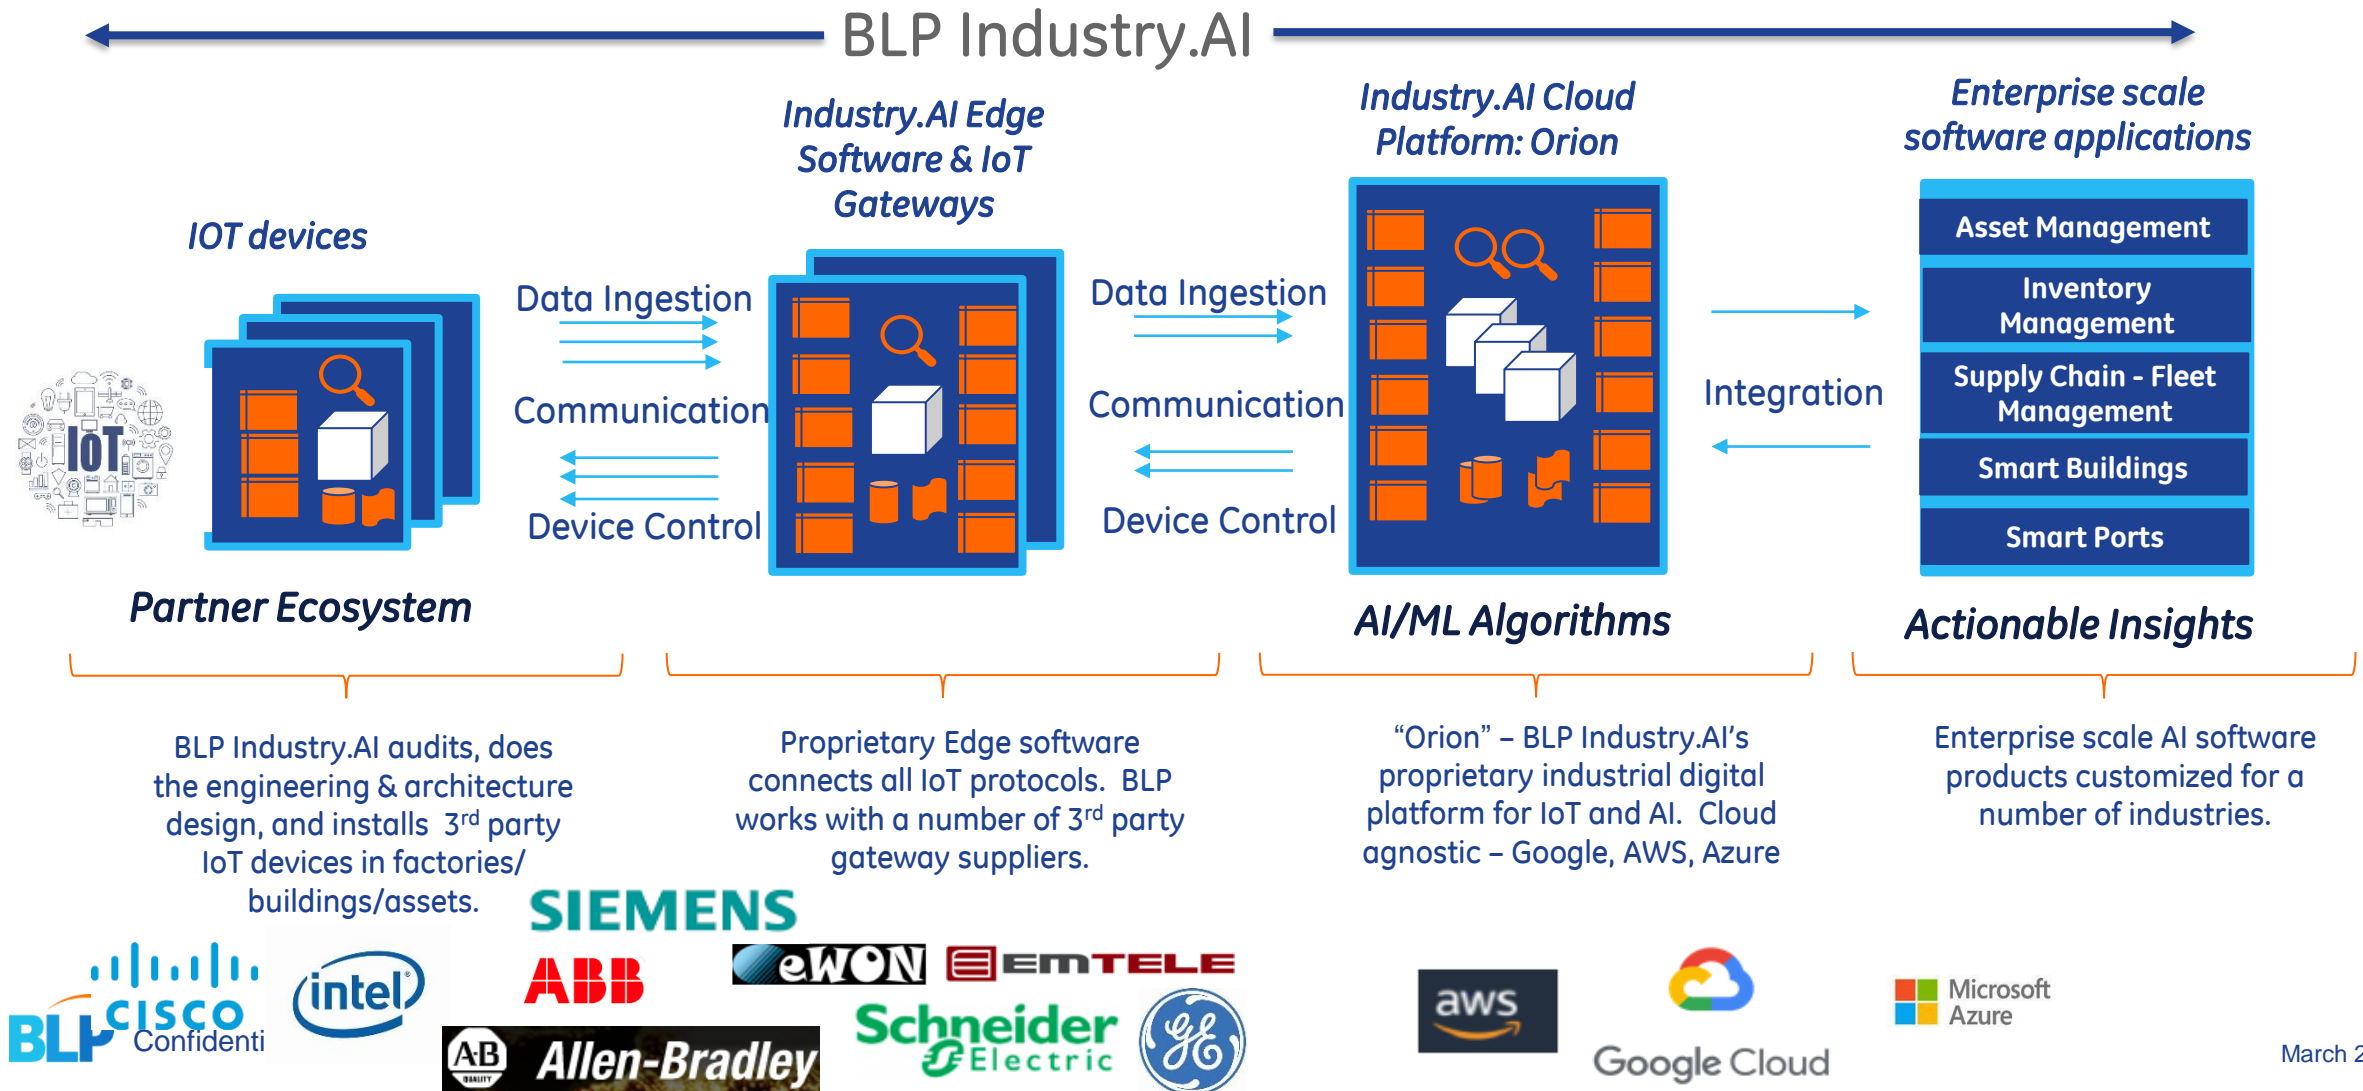

Automation

Automate processes –
Deploy AI Models –
Act

End to end solutions..IoT to insights

Product + Service capabilities. “Orion” – operating platform for IoT and AI

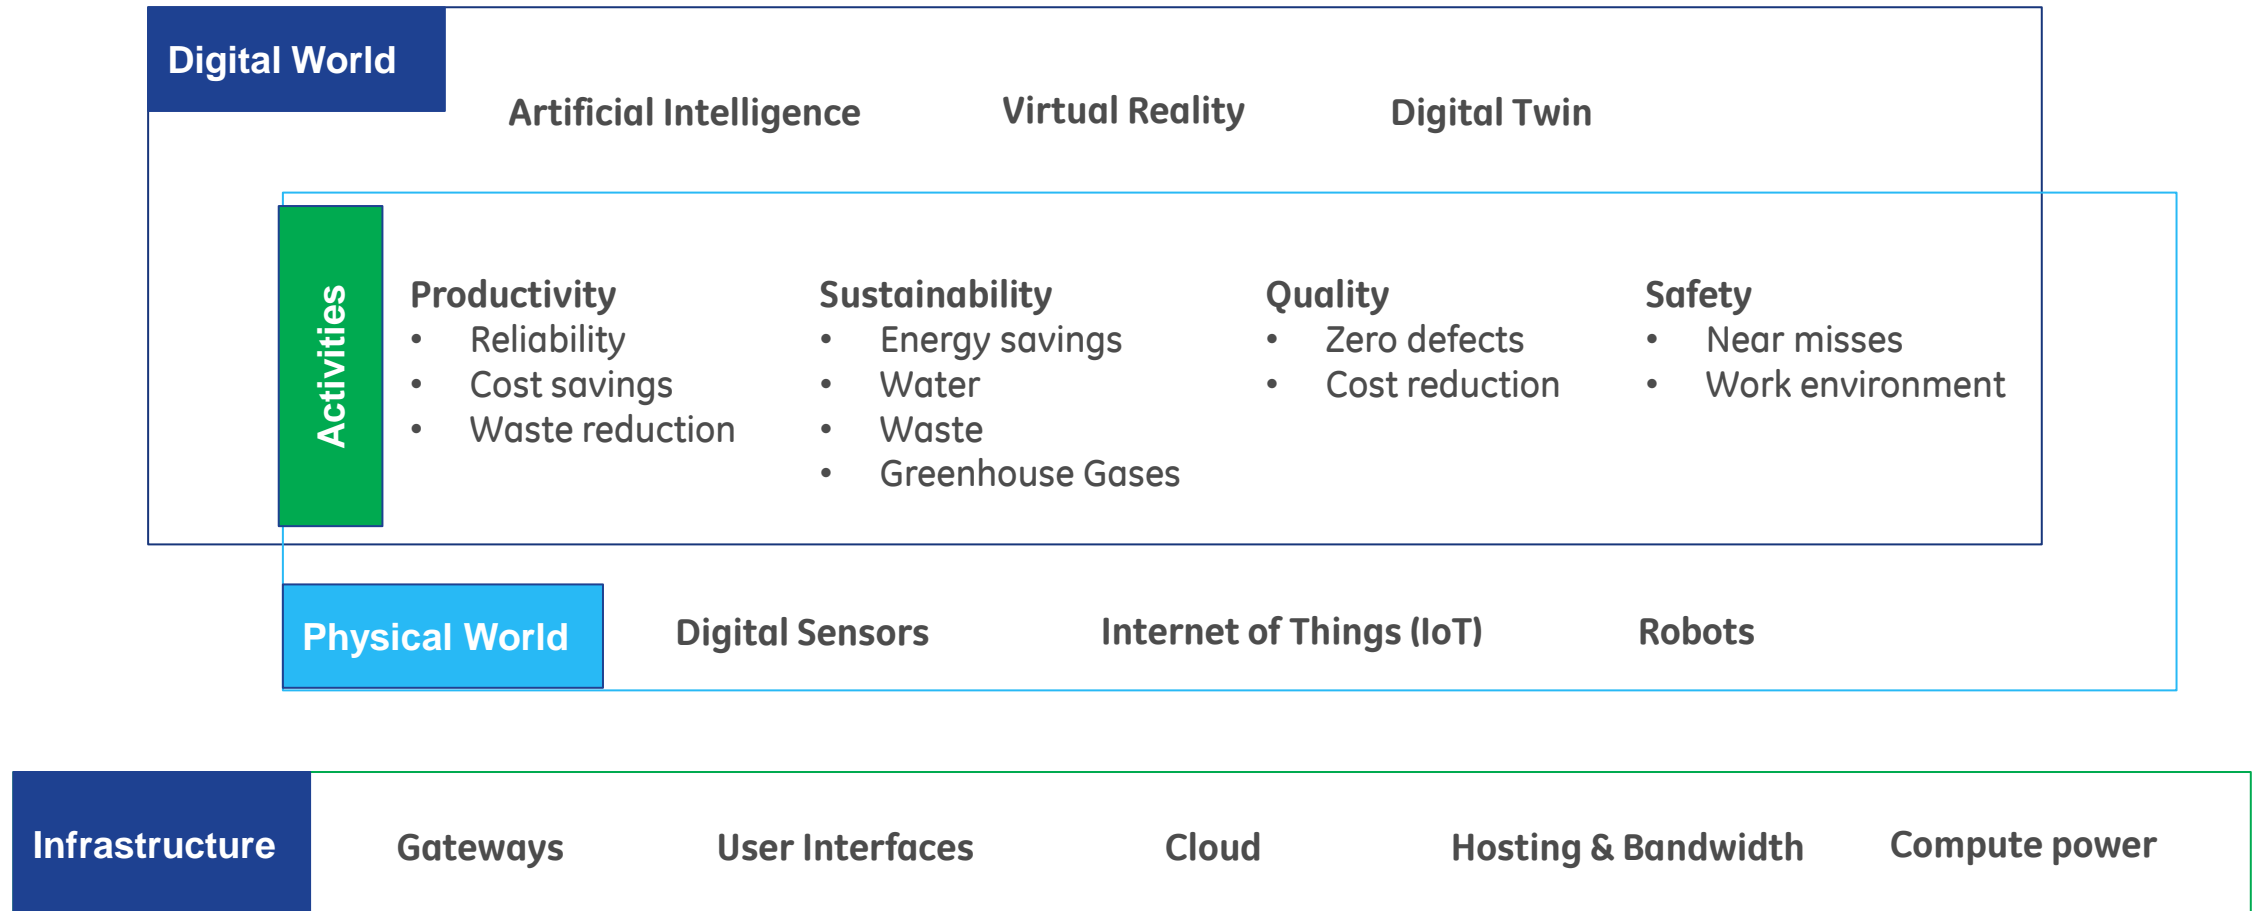

industry.**AI**

The Metaverse of the industrial world

industry.

Creating the metaverse of the industrial world to transform industry & manufacturing

What makes us different?

industry. 

People + Culture. Data Security & Privacy. Product + Service company - SaaS, PaaS, AI@service
Global Partnerships – Google Cloud, Apple, PWC, etc.

End To End Solutions

Installation of hardware/IoT – Data Aggregation – AI Analytics - Insights

AI Insights – 80+ algorithms

80+ proprietary algorithms developed in-house focused on industrial productivity

Innovation Culture

R&D lab + RoC in Bengaluru + High Frequency Data + 5G

Frugal Manufacturing

Orion IoT/AI platform aligned with frugal manufacturing to drive Quality and Reliability

Industrial eco-system – Open Architecture

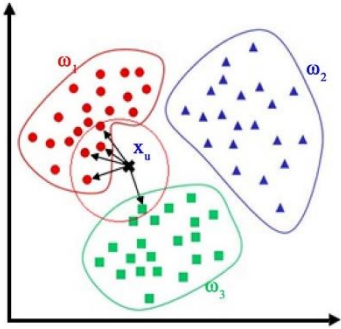

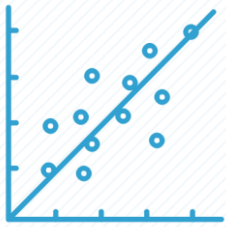

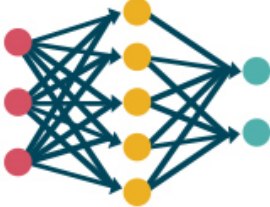

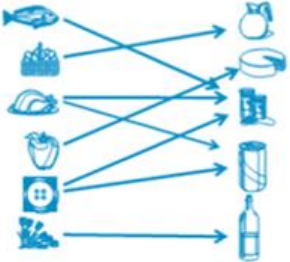

Platform to bring all stakeholders together – OEMs, Telco, Cloud, Customers, IoT manufacturers etc.

Application- Core AI – Orion Platform – Industrial Digital Platform – Providing industrial intelligence to improve productivity and quality

AI/ML Techniques in Action

Following are typical algorithms being used for developing various solutions

Tree Based / Ensemble	<div><div>CART ID3 Random Forest Bagging Boosting AdaBoost C4.5 / C5.0 CHAID Decision Stump / M5 Weighted Average (Blending) Stacking GBM GBRT</div><div></div></div>
Time-Series	<div><div>ARMA ARIMA SARIMA SARIMAX Holt Winters</div><div></div></div>
Classification	<div><div>AODE BBN BN LARS Naïve Bayes Gaussian Naïve Bayes Multinomial Naïve Bayes</div><div></div></div>
	<div><div>Clustering</div><div><div>k-means kNN EM LVQ SOM Ranking SVM one class SVM Hierarchical Clustering Locally Weighted Learning Affinity propagation</div><div></div></div></div>
Regression	<div><div>Logistic Regression Linear Regression Ridge Regression LASSO Elastic Net LARS</div><div></div></div>
Neural Nets	<div><div>LSTM MLP Back Propagation Hopfield Network RBFN Stochastic Gradient Descent</div><div></div></div>
ARM	<div><div>Collaborative-Filtering (CF) Apriori Algorithm ECLAT</div><div></div></div>

AI/ML Capabilities

Over 80 algorithms developed over 6 years for more than 20 Industrial segments

industry.

Industries

Wind Energy
Solar Energy
Oil & Gas
Chemicals
Tire
Glass
Steel
Aluminum
Cement
Refractories
Thermal Power Plants
Automotive Spare Parts
Aviation
Supply Chain Management
Transportation (Rail/Road)
Shipping
Ports
Electrical Goods & Appliances
FMCG
Sugar
Ceramic Tile
Commercial Buildings

Failure Prediction

Predicting failures in advance with the help of advanced AI model trained & tested on historical data and validated on live data

Recommendations

A prescriptive approach to suggest actionable insights for implementation on the field by frontline resources

Asset Health Prediction & Diagnostic

Learning from the past events and historical behavior and predicting the reliability of the equipment / entire process

Anomaly Detection

Identification of deviations far away from the normal behavior and suggesting the impact and risk exposure

Dynamic Threshold

A tailored approach to address highly sensitive specialized issues based on the current level of operations given the historical exposure and behavior

Energy Analytics

Applying deep knowledge of domain and data science to address challenging issues causing high specific energy consumption

Industry.AI algorithms & applications

industry.

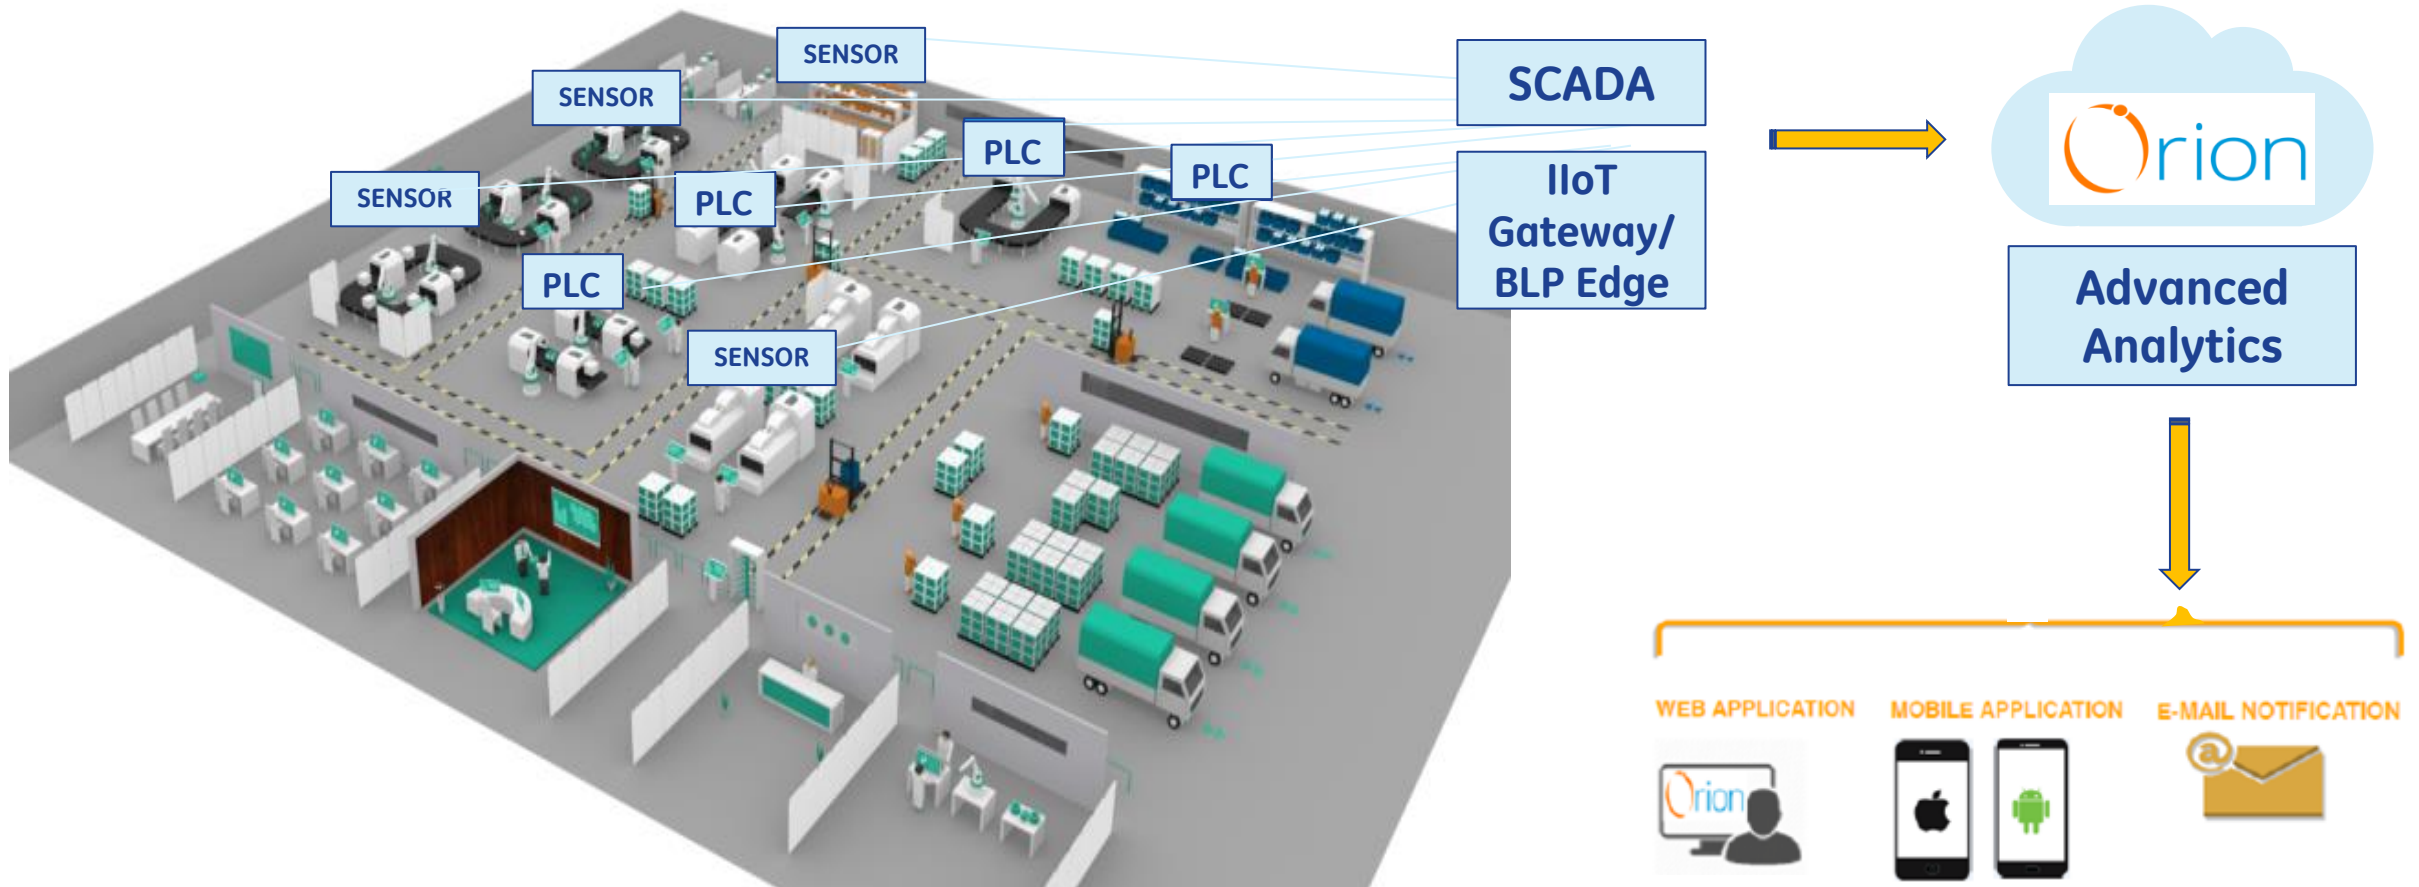

Application – Predict.AI – Smart Factory – Plant Digitalization. APM. OEE

How does it work?

The Industry.AI IoT team installs the IoT devices and connects them through BLP Edge. The platform is compatible with all protocols and therefore helps scale and deploy IoT applications seamlessly.

industry.**AI**

Architecture

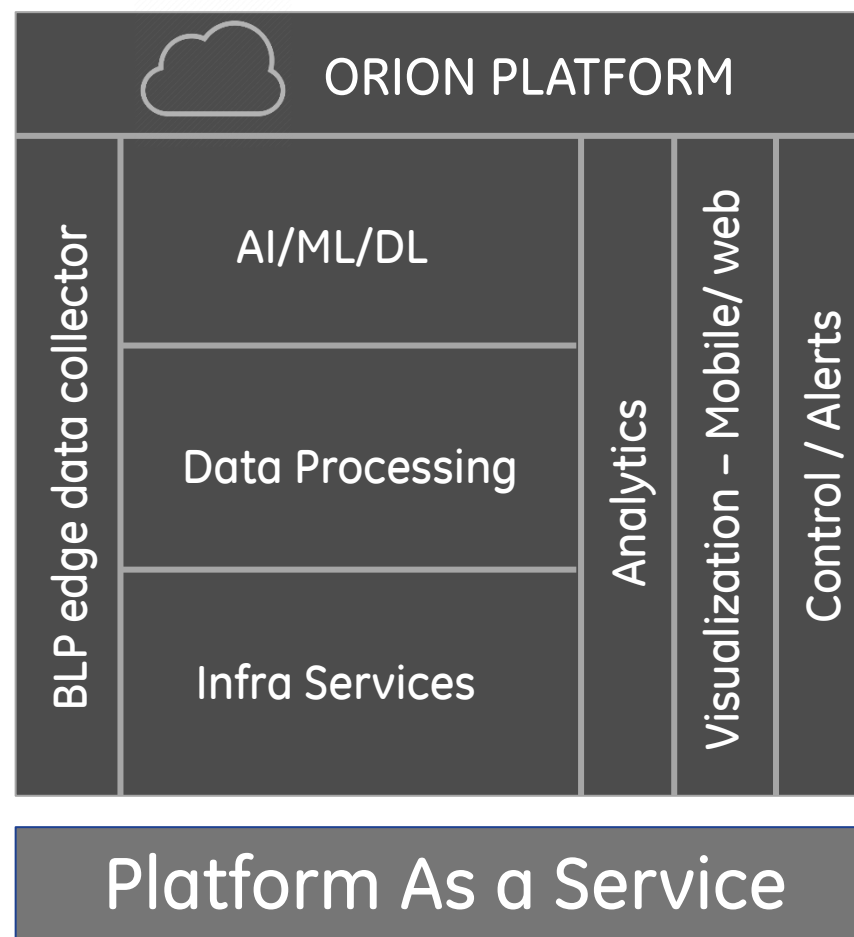

industry.

An integrated solution – from data input to insights. Detect, Improve, Automate

Data Sources

- Maintenance Data/Failure Data
- Enterprise systems
- Zone and Territory level Sales Data
- Store Info and Credit History
- Sensors/SCADA/PLC – Vibration, Temperature, Flow etc
- Weather data
- Camera/CCTV

Applications

1. Sales forecast & Planning
2. Predictive Maintenance
3. Asset Performance

Unit-1: Site Visuals

1. Line-02 Rough Press Machine

industry.

Data Frequency : 5 Seconds

Front View

Left Side View

Back Side View

Unit-1: Site Visuals

Main Motor vibration and temperature monitoring

industry. 

Vibration Sensors for
collecting data from
Non-Driving and Driving
End Of the Motor.

Unit-1: Site Visuals

Friction Wheel bearing vibration and temperature monitoring

industry. 

Vibration Sensor for collecting data from descent/ascent friction side of the bearing wheel.

Temperature Sensor for collecting data from descent/ascent friction side of the bearing wheel.

Unit-1: Site Visuals

Friction Wheel/Break Pad Gap monitoring during forging & Idle time

industry.

Gap Measurement using
Laser sensor on ascent
side of the Flywheel.

Application – Conserve.AI – Smart Buildings – Energy Efficiency – Sustainability

Connected Buildings

IoT is driving efficiency and sustainability

of Connected devices - Buildings

1.7 B

2014

5.5 B

2020

By 2020: >30% connected devices in every building

Desks

Trash
Cans

Lighting

Occupancy

End to End digitization solving modern problems

30% Possible Reduction in engineering

82% Untapped Potential in Energy Efficiency

20% Energy Savings Per Year

11% Increase in customer experience

Standardization

Standardization, reusability, and mobile technology mean less effort in engineering and deployment

Energy Efficiency

Buildings have the highest untapped energy efficiency potential by sector

Connected IOT

Predictive maintenance enabled by IoT and artificial intelligence

Customer Experience

A more personalized, comfortable experience drives productivity

Digitization drives Sustainability

Benefits

industry.

01

Measure

- Need connectivity of all key equipment regardless of manufacturer. Install additional IoT devices if required

02

Transparency

- Provides insights into the building and factory operations

03

Traceability

- Identify areas for savings

04

Connect people to the building

- Mobile and connectivity provides greater cohesion

Conserve.AI - Integrating all operational parameters of a building onto one platform – energy, water, waste, fire, security, DG, air quality, etc

industry.**AI**

Using AI and IoT to improve operational efficiency and transparency

Conserve.AI - Integrating all operational parameters of a factory onto one platform –
Process heating, motors, compressor, boiler, energy, water, waste, DG, etc. industry.AI

Using AI and IoT to improve operational efficiency and transparency

Conserve.AI - Integrating all operational parameters of a factory onto one platform –
Process heating, motors, compressor, boiler, energy, water, waste, DG,etc industry.AI
Using AI and IoT to improve operational efficiency and transparency

Application – Trust AI – Video Analytics for
real time event detection – – Safety,
Security and Quality

Visual Analytics Platform

Delivering High Return on Investment

Hospitals,
Hotels &
Schools

Retail Stores

Commercial
Buildings

Transportation/
Supply Chain

Manufacturing/
Warehouses

Existing Camera
Feed Stored in
Local Servers

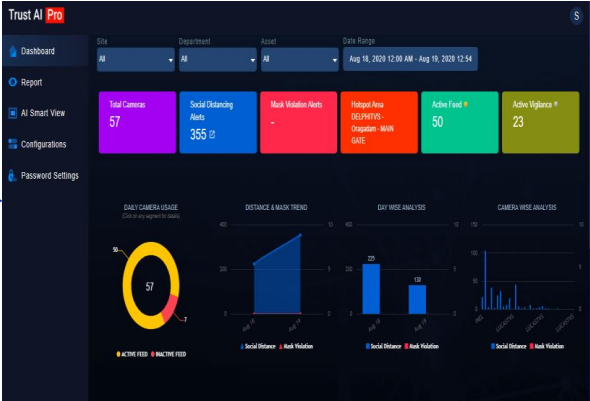

Orion Platform
In-House Algorithms

Advanced
Analytics

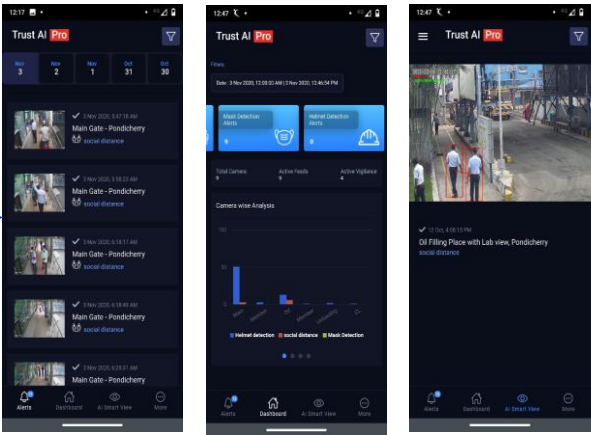

Orion Cloud Platform

industry.

Predictive Analytics
+
Real Time Data

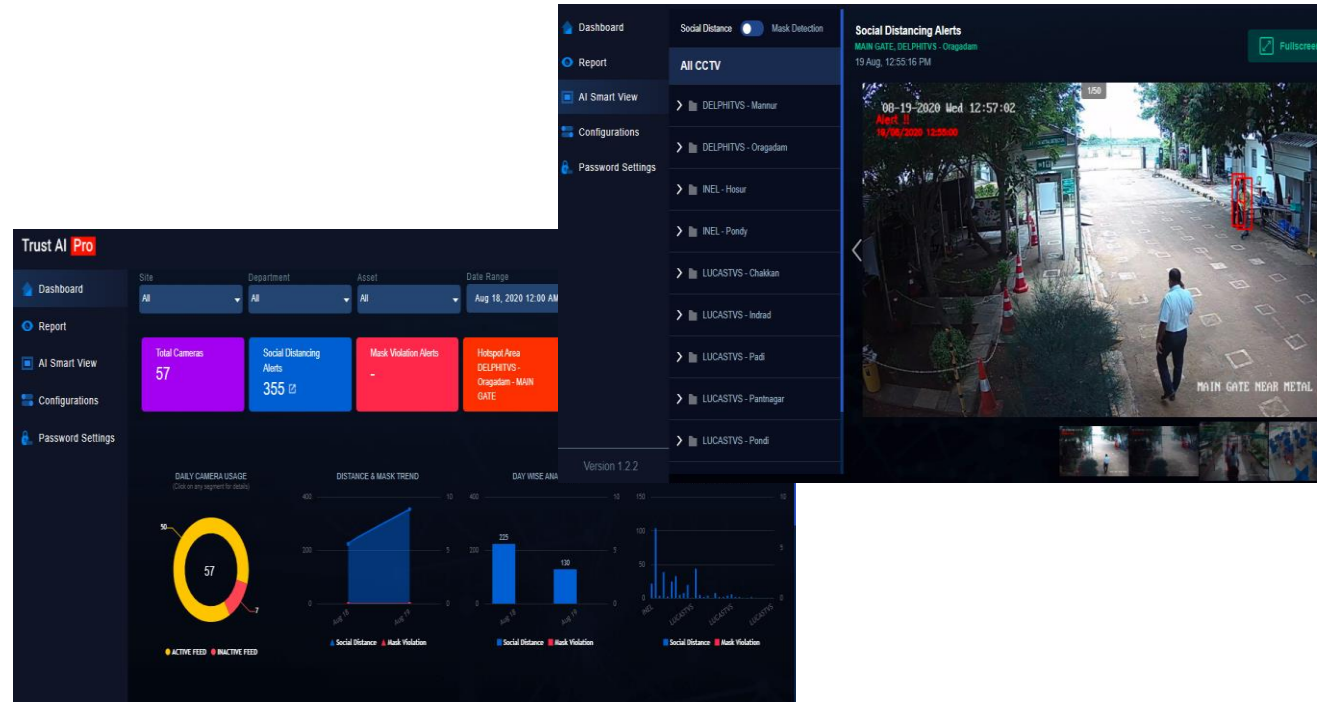

AI Application - Visualization

Transforming video feed into actionable insights

industry.

ANALYTICS INTERFACE

Analytics Dashboards with Real-Time Metrics

IN-DEPTH MONITORING

Ability to monitor each individual camera

Data Metrics and Parameters

industry. 

Occupancy

Count People and
Vehicles Entering and
Exiting

Age, Gender, Emotions

People
Demographics

Intrusion

Reliably detect
intrusion into your
facilities

Dwell /Loitering

Time people spend
in specific zones

Queue Management

How long are
employees/ customers
waiting in line?

Smoke/Fire Detection

Visually detect fire and
smoke in camera views.

Security

Object and people
detection models to
ensure safety

Heat Maps

Visual
representation Of
Zone Data

Throughput

Detect objects crossing
specified edges of the
zone

Walk By

Managing walk in's

Alerts

Maintenance &
Security Alerts

Parking Management

Vehicle Analysis

Safety – Track usage of PPE and compliance of industry. AI safety norms

Safety - Social distancing using computer vision models

industry.**AI**

Safety – Mask Detection using computer vision models

industry.**AI**

Use Cases – Trust.AI...the future

industry.**AI**

Automation - video feed ingestion, enrichment & structuring

Quality –Track manufacturing defects on a production line correctly.

Safety - Visual inspection for PPE compliance in factories & ports. Monitor worker behavior in construction sites

Security - Real Time vehicular traffic monitoring

Visual auditing - Ensuring compliance of trucks, trains or windmills out in the field

Retail - Use a travel image to find retail suggestions in that area etc.

Safety - Railways – identification of defects with Visual analytics

industry. 

Safety – Geo Fencing

industry.**AI**

Manufacturing Defects – Quality Improvements

industry.**AI**

Improve quality control by detecting defects using real time video processing

Safety – Construction Industry

Ability to scan large construction sites

industry.

Safety – Fire/Smoke

Substations

industry.**AI**

2021/01/01 10:35:48

Security – Warehouses

Real time alerts using Visual Analytics

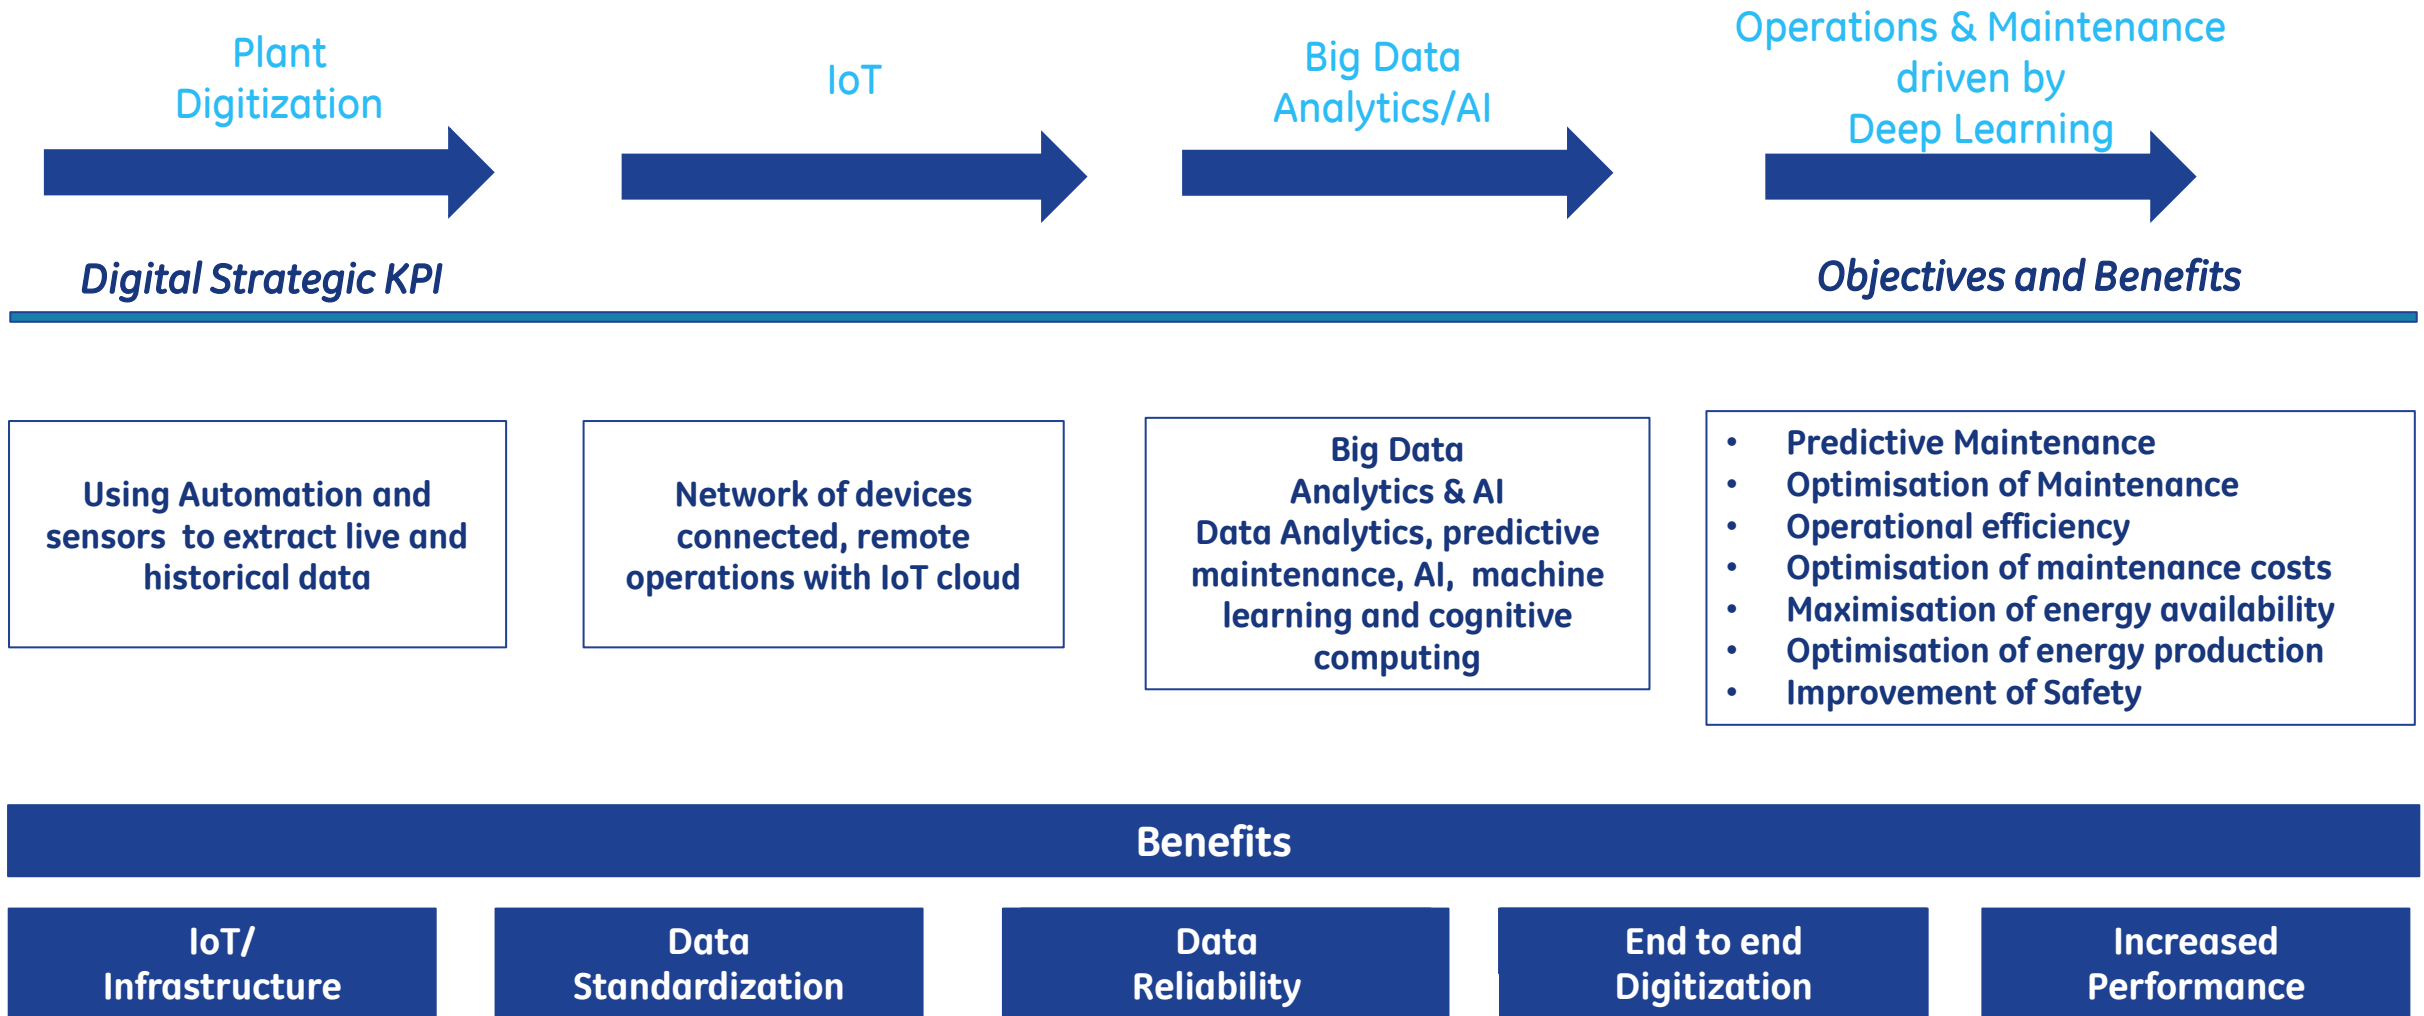

Application – Improving machine performance and uptime - Wind and Solar Farms

Transforming Operations & Maintenance industry.

Creating the Digital power plant, reducing maintenance expenses

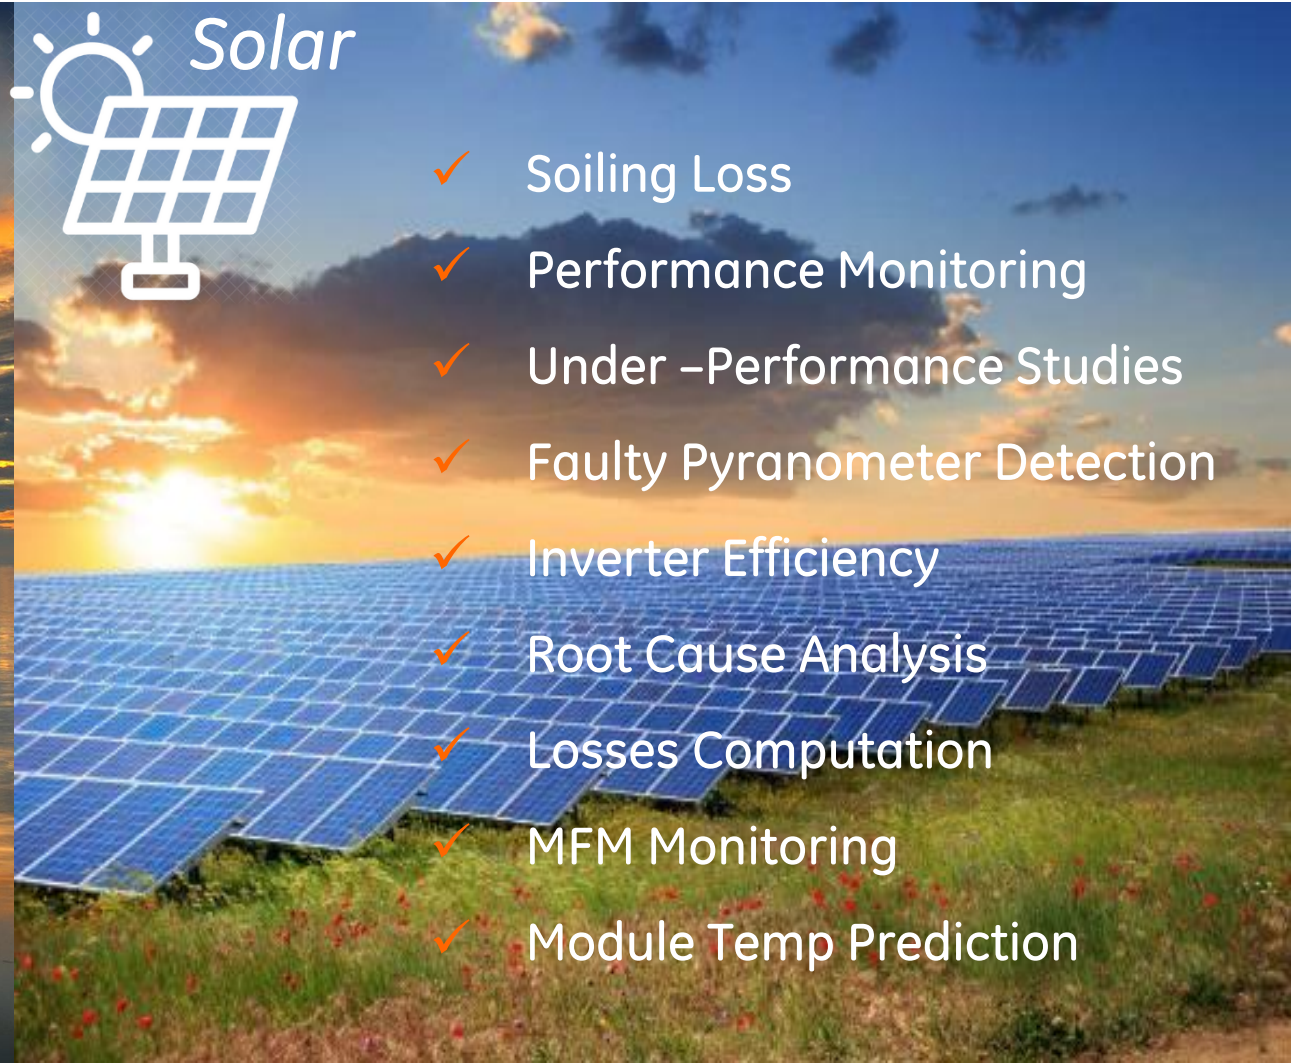

Comprehensive AI and ML Algo's

industry.**AI**

The Orion Platform includes a suite of inhouse algorithms and analytics to increase competitive advantage and increase revenue

- ✓ Early Fault Detection
- ✓ Yaw Mis -Alignment
- ✓ Icing
- ✓ Blade Pitch Angle
- ✓ Blade Corrosion
- ✓ Useful Remaining life
- ✓ Power Curve Deviation
- ✓ Critical Component Monitoring
- ✓ Overall Health Assessment

- ✓ Soiling Loss
- ✓ Performance Monitoring
- ✓ Under -Performance Studies
- ✓ Faulty Pyranometer Detection
- ✓ Inverter Efficiency
- ✓ Root Cause Analysis
- ✓ Losses Computation
- ✓ MFM Monitoring
- ✓ Module Temp Prediction

Visor Installation

Ability to capture data from 300 wind turbines

industry.

Sensor Installation

Ability to install sensors in all the rotating parts like Generators, Gearbox, Motors, and Bearings. The Image below shows the installation of sensors to detect electrical output in the rotor.

Results ... Case Study

Early detection of Anomaly on Negative sequence voltage resulted in prevention of generation losses and a potential major failure

Summary

- ✓ End to end solution. Digitize Operations through IoT solutions. Dedicated IoT team to install the devices and ensure connectivity
- ✓ Orion - Industrial digital ecosystem bringing together machine OEM's, telco, cloud, customers and IoT providers
- ✓ Integrated approach - Identify & capture data, analyse & visualize the data, and provide actionable insights through AI based applications
- ✓ Increase productivity through big data analytics....improve returns, and drive sustainability
- ✓ Improve competitiveness through digital transformation
