

Digital
development won't
be inclusive unless
it's environmentally
sustainable.

But what does it
mean to be
sustainable in
the digital world?

Big technology
corporations:
sustainability as
mere efficiency
in the use of
resources.

Communities:
sustainability as
the pulse of
their territorial
realities.

Governments:
sustainability as
a constant
tension between
investment and
the well-being of
the population.

“

Most of the value added in the digital economy is captured by developed and some digitally advanced developing countries, while many of the costs are most harshly felt in other developing countries.

Countries at different levels of development are unevenly affected by environmental impacts related to the various stages of the digitalization life cycle.

TECNOLOGÍAS PARA UN PLANETA EN LLAMAS

Paz Peña Ochoa

Los peligros del tecnocapitalismo
y la necesidad de una transición
digital justa en la era de la crisis
climática y ecológica

Public policies should aim to:

Redirect the current logic that dominates technological development (and is concentrated in a few global players) to be climate and ecologically responsible.

Restore balance to the digital economy by promoting new forms of technology and innovation that enhance and enrich it, fostering technodiversity.

Data centres will use twice as much energy by 2030 – driven by AI

These facilities accounted for roughly 1.5% of global electricity consumption in 2024.

The AI boom may unleash a global surge in electronic waste

Most e-waste is never recycled. Data center upgrades for AI projects could significantly add to the problem, researchers say.

Deciphering AI Water Consumption: How Amazon Hides How Much Water Its Cloud Consumes in Spain (Spanish)

Country:

SPAIN

Not all technology causes the same
socio-environmental damage, and not
all technology companies have the
same responsibility.

Redirect the current logic that dominates technological development to be climate and ecologically responsible.

Restore balance to the digital economy fostering technodiversity.

- Cooperation & coordination
- Transparency & access to information
- Participation
- Restoring biodiversity in the digital ecology before our possibilities become extinct

Let's not miss this opportunity
