The views expressed are those of the author and do not necessarily reflect the views of UNCTAD

# UNFSS

United Nations Forum on Sustainability Standards

# Voluntary Sustainability Standards, Trade and Sustainable Development

## Third UNFSS Flagship (Chapter 1) Presentation

Matteo Fiorini

European University Institute, Florence

October 11, NTMs Week 2018, Geneva

To break the ice...

# Voluntary Sustainability Standard (VSS)

- A **document...**
- that provides **requirements** (rules, guidelines or characteristics) for **products/services** or related **processes and production/performance methods...**
- defined to meet **economic, social and environmental sustainability metrics...**
- with which compliance is **not mandatory** ( $\neq$  technical regulations)
- designed and approved by one or more among the following entities:  
NGOs /Corporation/Industry/Government body/International organization

# The UNFSS Flagship in a nutshell

- Prospects and limits of Voluntary Sustainability Standards (VSS) to contribute to the Sustainable Development (SD) agenda
  - potentially effective tool for sustainable supply chain management, marketing, competitiveness, market access but also...
  - potential barriers to trade, GVC participation etc
- Aim of the Report:
  - contribute to this debate theoretically and empirically
  - focus on trade
  - policy perspective

# Main messages/outputs

- VSS can potentially be a catalyst of sustainable development, both directly and indirectly through trade
- However, effectiveness depends on institutional design factors of VSS systems and on the fragmentation of VSS landscape
- Taxonomy of policy tools for Governments and IO
- More transparency, data and analysis is needed to further assess VSS impact on SD

# VSS Systems: definition

# VSS Systems

- The **collective of organizations** responsible for the activities involved in the implementation of a VSS, including **standard-setting, capacity building, assurance, labelling, and monitoring and evaluation (ISEAL)**

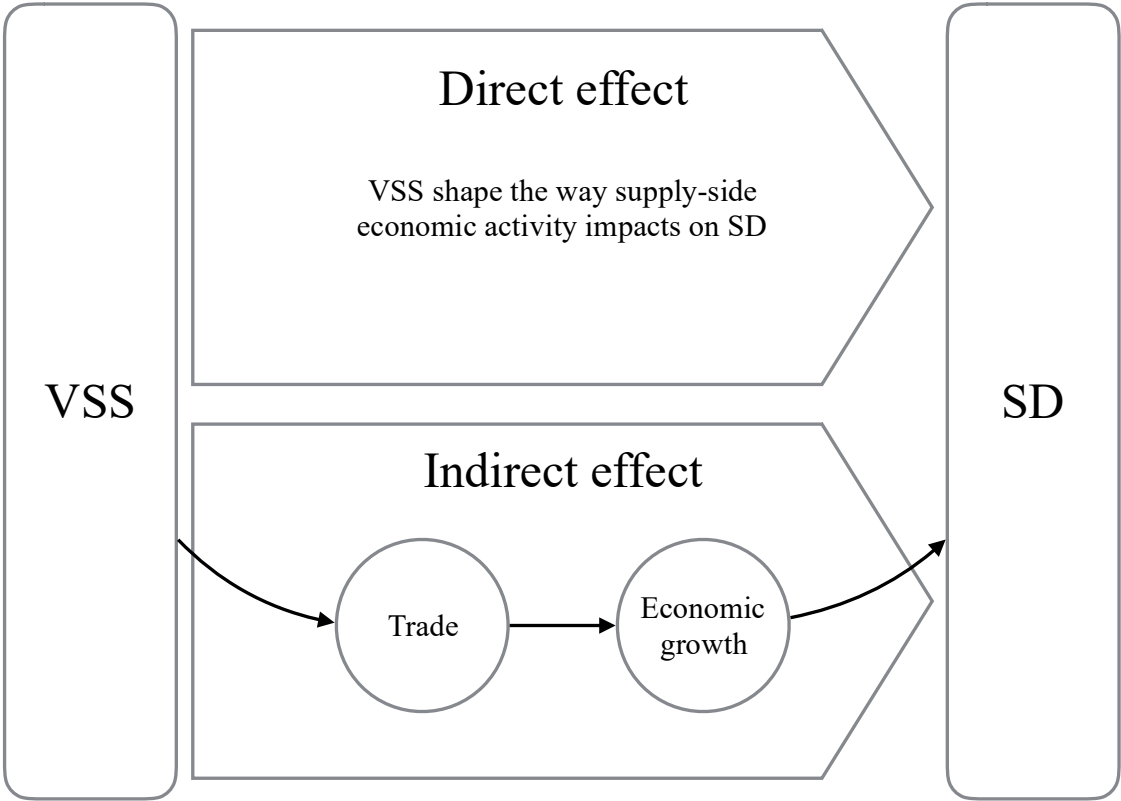

# Conceptual Framework

# The effects of VSS on SD

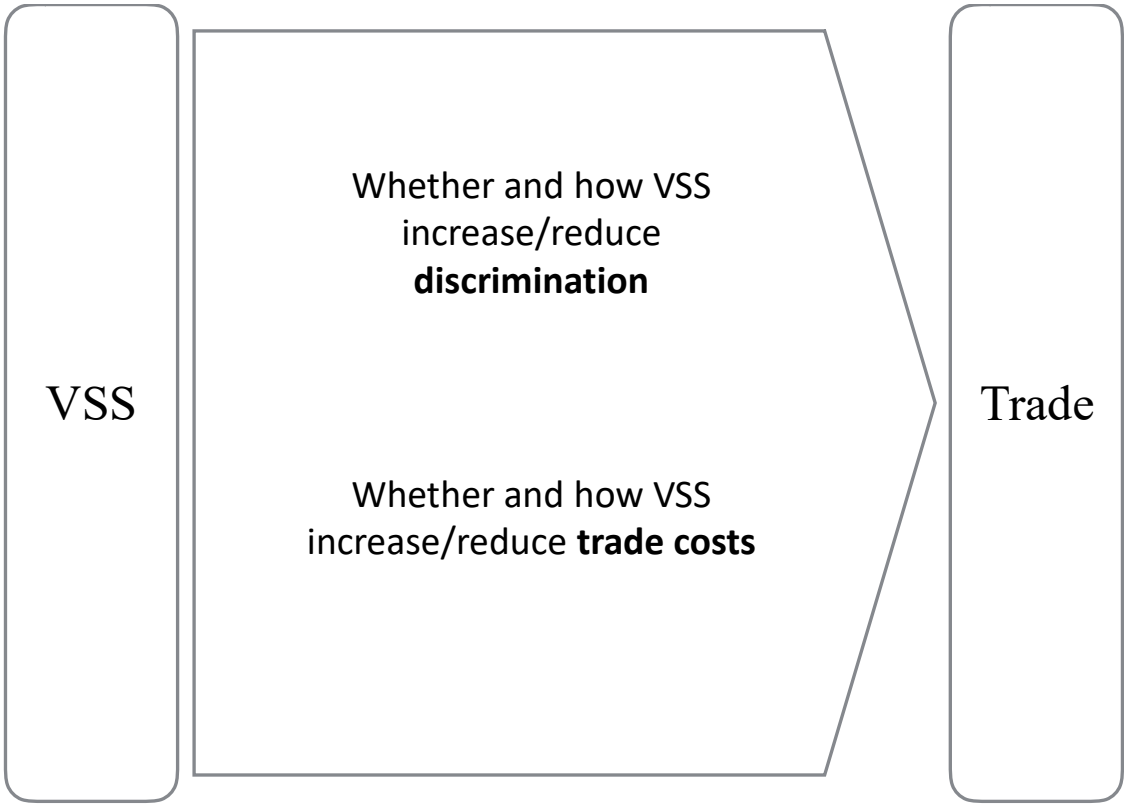

# The effects of VSS on SD

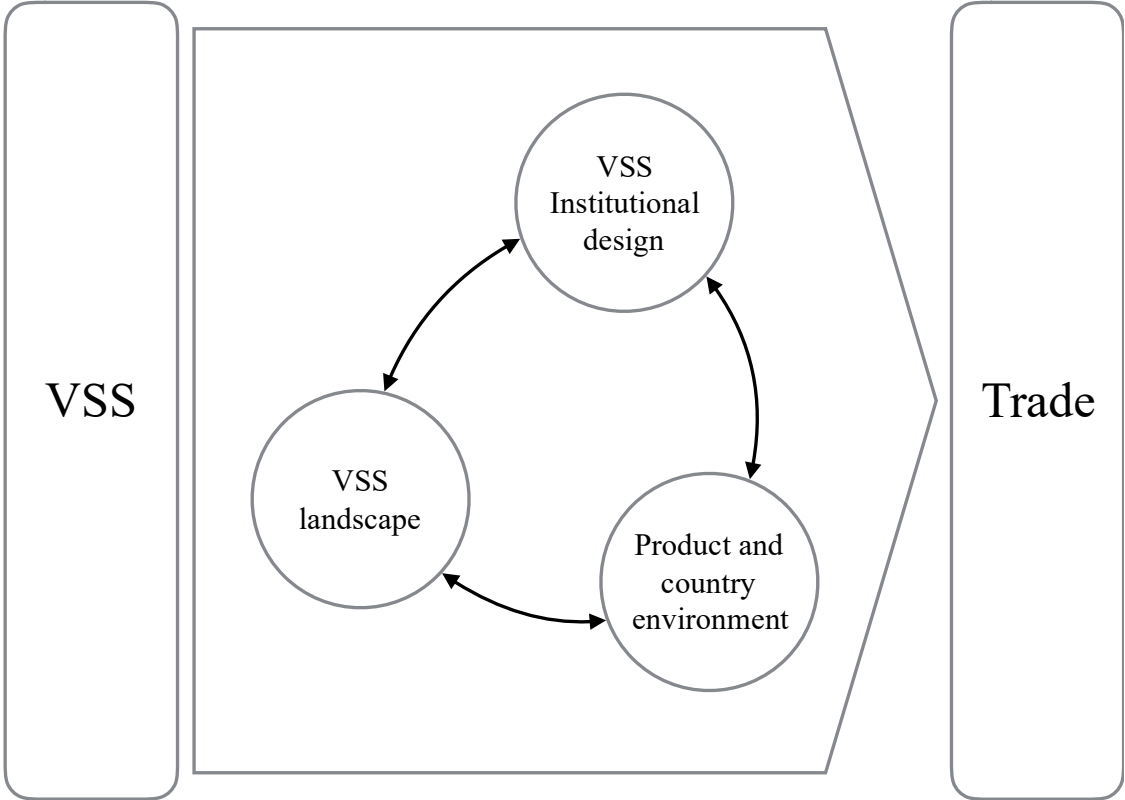

# The effect of VSS on trade

# The effect of VSS on trade

# The effect of VSS on trade

Direct effect of VSS on SD:  
a benchmarking empirical analysis

# Focus on 10 SDGs

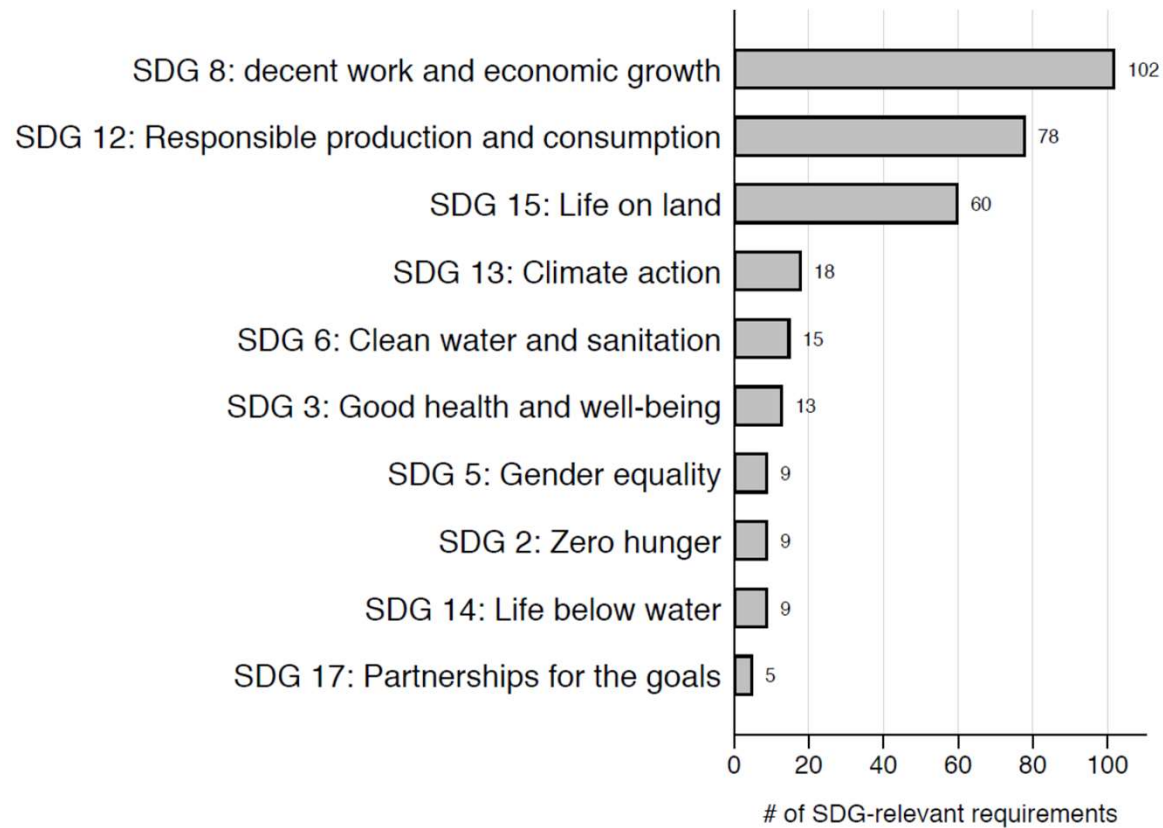

# Methodology

- Benchmark the 10 SDGs against the >800 requirements in ITC Standards Map
- We identify 294 sustainability requirements
  1. that directly relate to at least 1 SDG; and
  2. that are covered by at least one VSS (subset of 122 systems consistent with our definition)
- Which SDGs are best addressed in the VSS landscape?
- Which aspects of these goals are best addressed?

# Results: goal to goal comparison

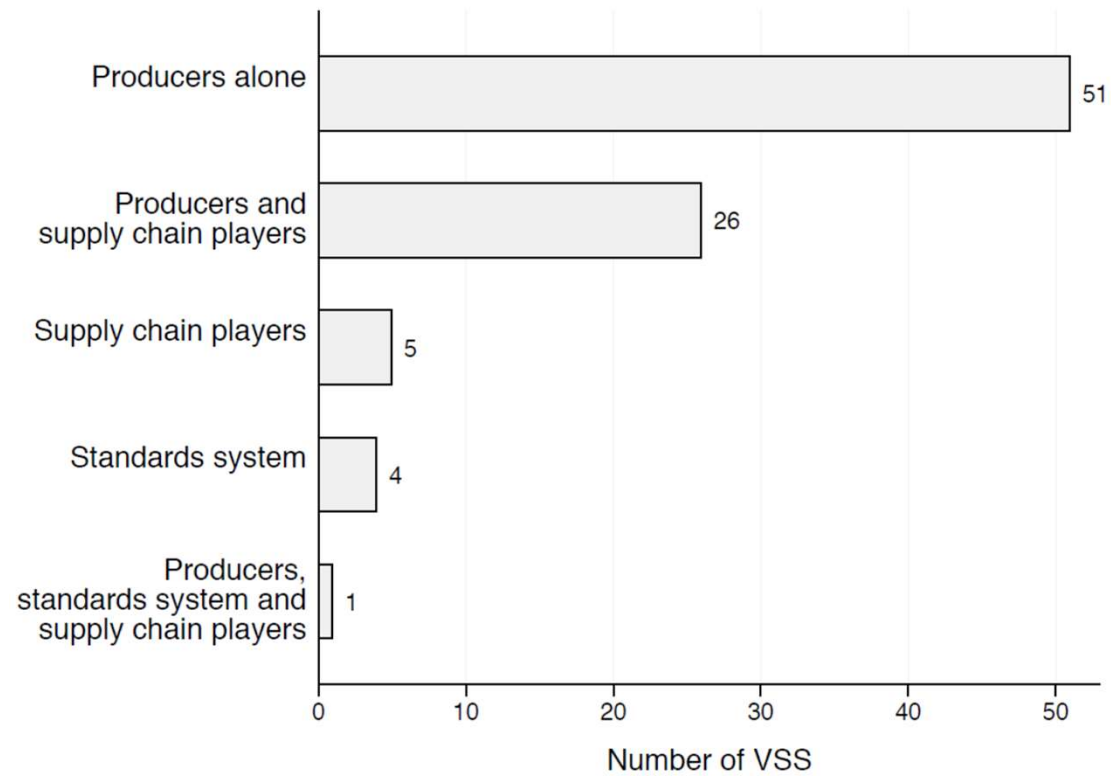

# Indirect effect of VSS on SD

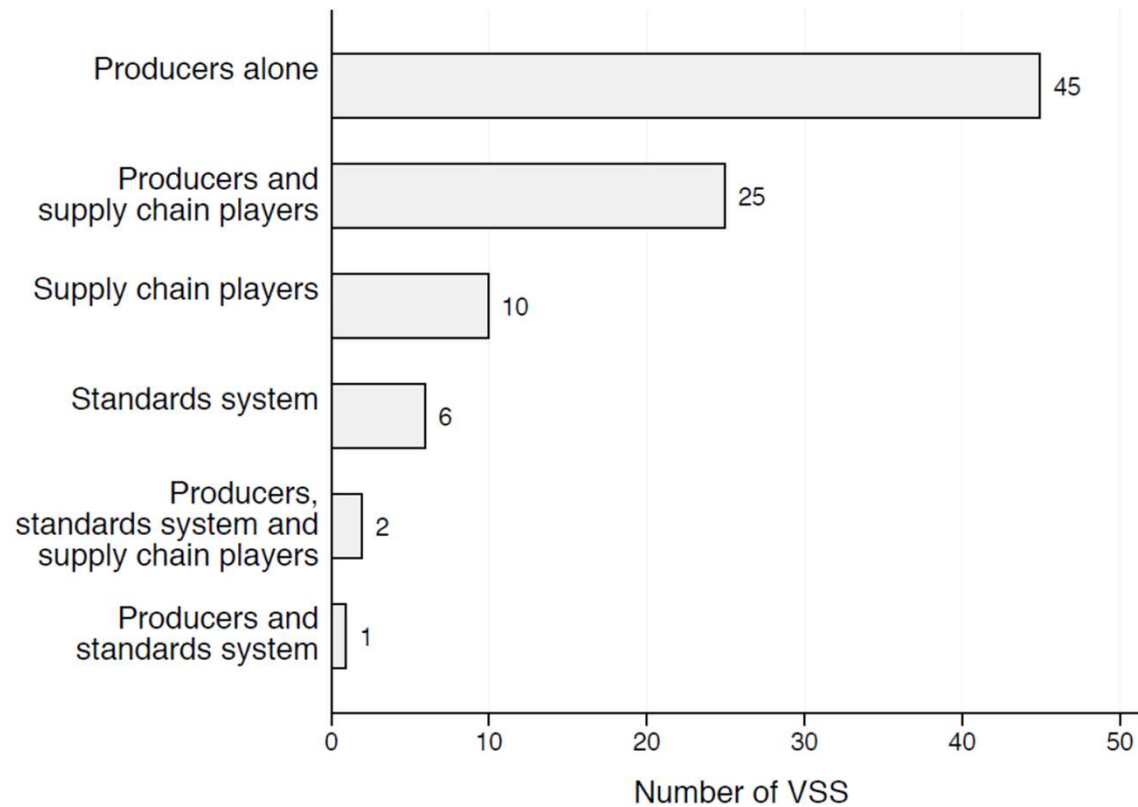

# Methodology

- Focus on institutional features and design of VSS
- Drawn from 2016 and 2017 ITC-EUI reports
- Descriptive evidence using ITC Standards Map (population of 122 VSS)

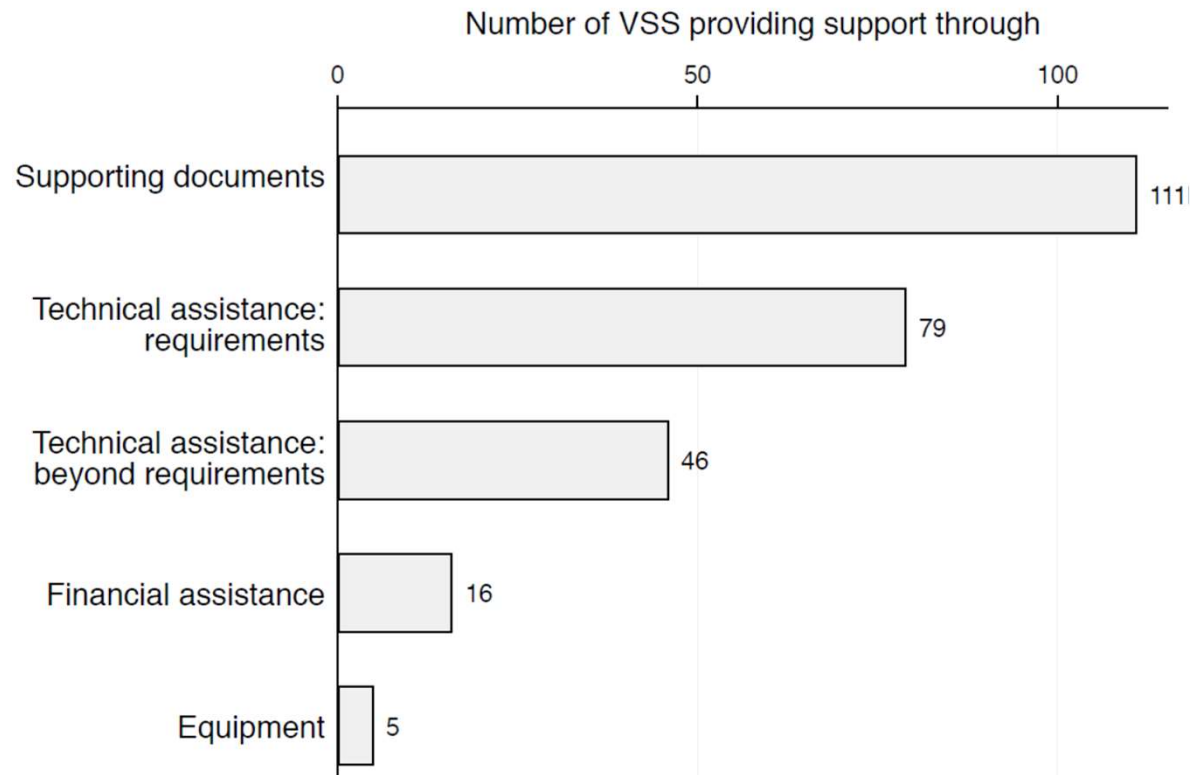

# Implementation costs

# Certification costs

# Support to producers

# Conclusions

- Numerous points of views based on incomplete information
- Third UNFSS Flagship provides
  - Tools for assessing the SD impact of VSS
    - Need for case-by-case evaluation
  - Large N empirical assessment of relevant features/parameters in the SD dimension of VSS
    - Identify SD dimensions where VSS have higher potential
    - Describe trade-relevant parameters of VSS institutional design and landscape
- Tools and implications for public policy design

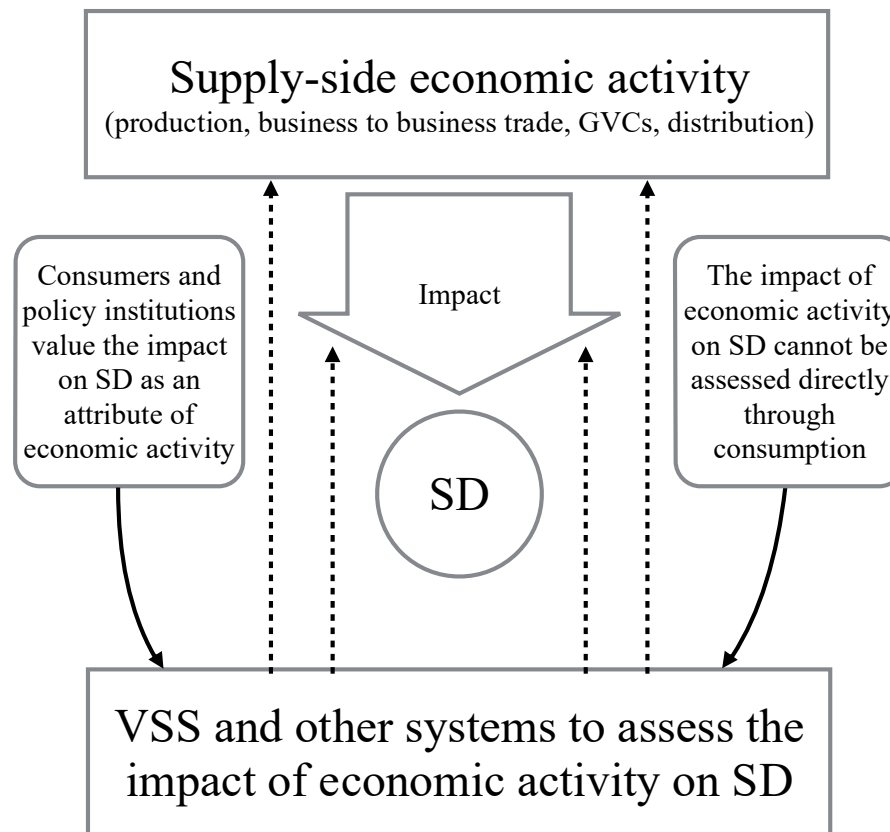

Thank you

# Appendix

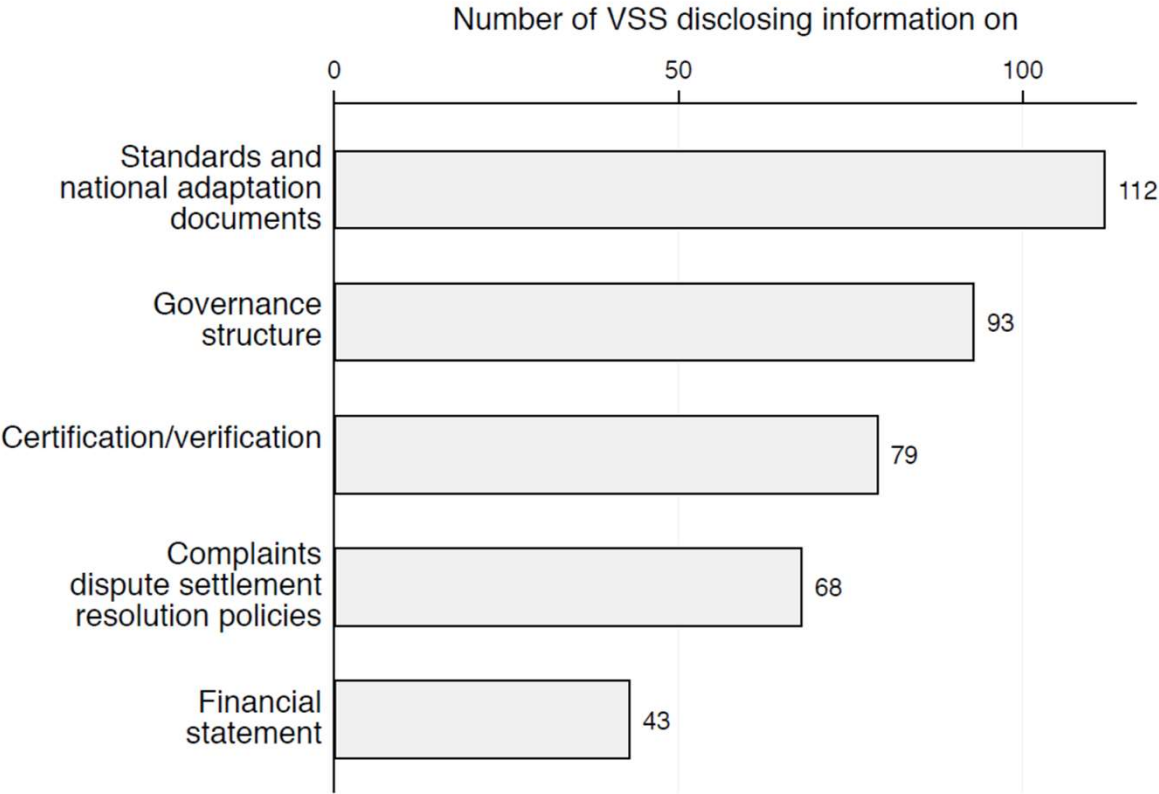

# The SD motive for VSS Systems

# Results: unpacking SDG 8 (top 10 req)

# Transparency

Indirect effect of VSS on SD:  
VSS landscape

# Highly fragmented markets

# Least fragmented markets

Policy tools to support VSS to  
work for SD

# What do GVTs and IOs can do to make VSS work for SD?

- VSS as a sphere of ‘co-regulatory governance’
- Different types of instruments for public governance of VSS
  - Informational instruments (e.g. provide knowledge to persuade...)
  - Economic instruments (e.g. provide economic incentives to shape the behaviour)
  - Legal instruments (e.g. use formal regulation)
  - Partnering instruments (e.g. public participation in VSS activities)

# Tools and channels for public governance

		Direct effect		Indirect effect	
		Level of sustainable development	Level of uptake	Institutional design	Structuring VSS landscape
<b>Instruments</b>	<b>Information</b>	1. Promote particular policies in standards	2. Provide information on VSS and their benefits	3. Promote involvement of particular stakeholders in governance of VSS	4. Provide information for comparison across standards; conduct benchmark studies
	<b>Economic incentives</b>	5. Subsidize VSS; Benefit more/less stringent or elaborate standards by public procurement	6. Use taxes or subsidies for those getting certified with or committing to VSS; subsidize baseline standards	7. Subsidize VSS; Benefit VSS with strong procedures through public procurement	8. Subsidize baseline standards; subsidize coordination platforms among VSS
	<b>Legal</b>	9. Delegate compliance to standards; legally define requirements for VSS	10. Delegate compliance to standards	11. Public accreditation of third party monitors or VSS organizations; legally define institutional requirements for VSS	12. Delegate compliance to VSS using a baseline standard
	<b>Partnering</b>	13. Develop new VSS together with business and/or civil society; build platforms to stimulate substance of VSS	14. Develop partnerships with VSS and their stakeholders to promote insights; build partnerships for capacity building	15. Develop new VSS together with business and/or civil society; build platforms to stimulate revision of processes VSS	16. Build platforms promoting coordination among VSS

# Policy cases

- GVTs promotion of domestic VSS in developing countries
- German development agency (GIZ) and the promotion of standards and metastandards
- IO and metastandard (UNFSS, FAO COFI, ...)
