

## **Report of the UN Secretary-General: Necessity of ending the economic, commercial and financial embargo imposed by the United States of America against Cuba (A/66/114)**

### **Contribution from UNCTAD dated: 6 May 2011**

The Accra Accord, adopted at the twelfth session of the United Nations Conference on Trade and Development (UNCTAD) in April 2008, urges States to refrain from promulgating and applying any unilateral economic, financial or trade measure not in accordance with international law and the Charter of the United Nations. It further stresses that meaningful trade liberalization requires addressing non-tariff measures, including unilateral measures, where they may act as unnecessary trade barriers. The Accra Accord calls for international efforts to be made to address non-tariff measures and reduce or eliminate arbitrary or unjustified non-tariff barriers.

#### **Trends in Cuba**

The embargo has significantly affected the Cuban economy and the standard of living of Cuban citizens. The Government of Cuba reports that overall direct economic losses caused by the embargo in 2009 were \$4 billion.<sup>1</sup> The adverse effects of the embargo on the public health and food sectors have been notable given their essential roles in the lives of the Cuban people. Since the introduction in the United States of the Trade Sanctions Reform and Export Enhancement Act of 2000, United States exports of some agricultural products and some medicines and medical devices have been allowed. Nevertheless, the continuing financial and travel restrictions severely impede exports of these products. The Government of Cuba reports that the embargo required it to incur \$15.2 million in additional expenditures on public health between May 2009 and April 2010. A study conducted by the United States International Trade Commission reports that Cuba imported \$708 million in agricultural products from the United States in 2008, and that lifting the existing financial and travel restrictions would have increased Cuba's imports by \$216 to \$478 million.<sup>2</sup> Moreover, the negative impact of the extraterritorial application of the embargo is substantial, as United States firms are frequently involved in international mergers and business partnerships. Hence, the extraterritorial application of the embargo not only negatively affects Cuba, but also deprives third countries of business opportunities with Cuba.

The Cuban economy showed moderate growth of 1.4 per cent in 2009, down by 2.7 per cent from the previous year.<sup>3</sup> The effects of the global financial and economic crisis, such as lower world prices for nickel and a reduction in tourism from leading sources Canada and Europe, contributed to sluggish

<sup>3</sup> World Trade Organization, "Cuba-article XV: 6 of the General Agreement on Tariffs and Trade 1994: report by the Government of Cuba under the decision of 15 December 2006" (WT/L/803), 18 November 2010, p. 2.

growth. Also, Cuba was still recovering from the devastation caused by two major hurricanes in 2008, particularly in the agricultural sector. As a result of the economic downturn, the Government of Cuba introduced austerity measures in mid-2009 that included energy rationing and cutbacks in transportation and some food programmes.<sup>4</sup> In 2010, GDP was projected to increase by 1.5 per cent.<sup>5</sup> Reportedly, overall food production has been significantly below target and there have been shortages of some basic agricultural products.<sup>6</sup>

Cuba's trade in goods declined substantially in 2009 from the previous year. UNCTAD estimates that Cuba exported \$3.1 billion and imported \$9.6 billion in goods, a decrease of \$1 billion and \$5.8 billion, respectively, from 2008. The sharp reduction in imports generated a goods trade deficit of \$6.5 billion in 2009, representing a substantial drop from \$11.4 billion in 2008. This steep decline resulted in a surplus of \$91 million in the overall current account balance in 2009 compared with a deficit of \$4.7 billion in the previous year.

The main export items in goods in 2009 were "Ores and metals", accounting for \$1.8 billion or 59 per cent of the total, followed by "all food items" and "manufactured goods". This ranking of sectors was the same as in the previous year, and exports in all sectors declined from the previous year. As to the destination of Cuba's exports, the European Union was the largest market for Cuban goods, which were comprised mainly of "ores and metals" and "all food items". The second largest export market was Latin America and the Caribbean, to which the majority of exports consisted of "manufactured goods". The European Union accounted for 26 per cent of Cuba's export market, while the Latin America and Caribbean region accounted for 13 per cent.

The main import items in goods in 2009 were "manufactured goods", which accounted for \$5 billion, or 52 per cent of the total, followed by "fuels" and "all food items". This ranking of sectors was the same as in the previous year, and imports in all sectors declined from the previous year. The Latin America and Caribbean region was the largest source of imports, accounting for 42 per cent of Cuba's total, and over 70 per cent of goods imports were "fuels". The European Union was the second largest source of imports, accounting for 22 per cent of Cuba's total. A majority of the imports were "manufactured goods". The introduction in the United States of the Trade Sanctions Reform and Export Enhancement Act of 2000 has made the country the single largest exporter of agricultural products to Cuba. In 2009, United States agriculture exports accounted for \$671 million, or 44 per cent, of Cuba's total agricultural imports.

Cuba's trade in services also declined in 2009 from the previous year. UNCTAD estimates that Cuba exported \$8 billion and imported \$1.4 billion. The magnitude of this decline was much less than for trade in goods. The country had a surplus of \$6.6 billion in trade in service trade in 2009, which was slightly lower than in 2008.

Cuba's major service exports are health, education and tourism. The cooperation agreement with the Bolivarian Republic of Venezuela, which links

Cuba's oil imports to its exports of health care and education services, remains an important source of support for the Cuban economy.<sup>7</sup> Also, remittances from relatives living abroad, especially from the United States, have become a significant source of hard currency, with more than \$1 billion reportedly sent to Cuba in 2009.<sup>8</sup> A breakdown of Cuba's service imports is not available.

Cuba's main trading partners in 2009 were the Bolivarian Republic of Venezuela, China, Spain, Canada, Italy, the Netherlands, Germany, Viet Nam and even the United States, in terms of agricultural exports to Cuba.<sup>9</sup> Economic ties with emerging economies, such as China, Brazil and the Russian Federation, are becoming increasingly important. UNCTAD estimates that exports and imports of goods will rise by 17 to 25 per cent in 2010. Trade in services is projected to be slightly higher than in 2009. Data on service imports for 2010 are not yet available.

### **Developments in the United States**

In January 2011, the United States Administration announced some relaxation of the embargo. The changes made included: (a) allowing greater licensing of travel to Cuba for educational, cultural, religious and journalistic activities; (b) allowing any United States person to send remittances of up to \$500 per quarter per person to any Cuban national, except prohibited officials of the Government of Cuba or prohibited members of the Cuban Communist Party; (c) authorizing unlimited remittances to religious organizations in Cuba; (d) authorizing remittances to individuals or independent non-governmental entities to support the development of private businesses, including small farms; (e) authorizing certain transactions with individual Cuban nationals who have taken up permanent residence outside of Cuba; and (f) allowing all United States international airports to provide services to licensed charter flights to and from Cuba.<sup>10</sup> These measures are similar to those taken by the Clinton Administration in 1999, which were subsequently abolished by the Bush Administration in 2003 and 2004.<sup>11</sup> The easing of restrictions on remittances to Cuba is expected to result in a significant increase in current transfers in the country. Several legislative proposals have been made in the current United States Congress to lift or ease the embargo, but their prospects presently are uncertain.

### **Conclusions**

Since the previous reporting period, there has been some relaxation of the United States embargo. This will undoubtedly have a favourable effect on the lives of the Cuban people. It should be noted, however, that these policy adjustments mainly restored the relaxation measures that were abolished in the early 2000s. Nevertheless, on the whole, the embargo remains intact and is severely constraining the development of Cuba and the improvement of its citizens' living standards. Although its bilateral cooperation programmes with developing countries help Cuba to face the challenges posed by the United

States embargo, the country still endures tremendous economic and social hardship. Cuba experienced a serious economic downturn in 2009 owing to the impact of the global financial and economic crisis. Although there were signs of recovery, economic growth likely remained sluggish in 2010. Reports of low food production and shortages of some basic agricultural products are of particular concern. Without the embargo, this shortage of food could have been mitigated. Furthermore, the embargo's extraterritorial reach penalizes firms and people in the third countries. Finally, the embargo limits the freedom of United States citizens to travel and conduct their lives in an ordinary manner.

Details of Cuba's merchandise exports and imports in the period 2006-2010 are given in table 1. Details of Cuba's services exports and imports in the period 2006-2010 are given in table 2.
