The Digital Transformation of Investment Promotion Agencies

During the COVID-19 pandemic, investment promotion agencies (IPAs) have been adopting new ways of working online and using digital tools. IPAs now need to address digitalization more strategically and move beyond a reactive approach. This should allow them to continue their traditional operations and achieve their objectives in a more efficient way. UNCTAD proposes 4 steps to adopt a strategic approach to the digitalization of IPA operations (box 1).

To remain competitive, IPAs need to enhance their digital investment promotion and facilitation efforts. To date, most digital tools relate to their investment promotion functions, such as marketing and investor targeting. But, in line with wider e-government efforts, digital tools and processes are increasingly being used by IPAs across the whole investment cycle (table 1). An important driver is the investor who

---

**Box 1. UNCTAD proposes 4 steps for IPAs to adopt a strategic approach to digitalization**

1. **Assess digital needs of the IPA**:
   - Consider the specific challenges, information and service gaps of the IPA in which digitalization could make a difference.

2. **Take stock of in-house digital skills and technologies**:
   - Review digital skills of IPA staff and map which areas of work are already fully or partially digitalized and which are not.

3. **Define goals of digital processes and tools**:
   - Identify and describe where digitalization can complement and enhance existing services or where functions can be strengthened.

4. **Adopt agile processes and regular feedback mechanisms**:
   - Digital transformation can be an incremental process and IPAs can begin with 1 or 2 areas of work. Ensure regular monitoring and benchmark progress on goals.

is demanding easily accessible, accurate and up to date information online before committing resources to travel and conduct site visits. This, together with stagnating foreign direct investment, a widening finance gap to achieve the Sustainable Development Goals, and other challenges including changes in the international tax system, reinforce the need for countries to strengthen their investment promotion and facilitation efforts. It is therefore no surprise that the number of digital information portals and single windows related to investment has increased in coverage and quality.¹

Table 1. Types of digital tools used by IPAs.

Agencies are not on a leveled digital playing field and those with low levels of preparedness risk falling behind.

To what extent an IPA can enhance the digitalization of its operations depends largely on the wider digital ecosystem in the country and its digital technology infrastructure and skills. The digital divide between the poorest countries and developed economies that was brought to light during the COVID crisis is also reflected in the work of government institutions. UNCTAD regularly monitors the online activities of IPAs and reported on their asymmetric response at the onset as well as amid the health crisis.²

In 2020, 68 percent of IPAs in developed countries provided comprehensive business-related information to investors through their various digital channels, compared to only 21 percent of agencies in developing countries and 2 percent in least developed countries (LDCs) (figure 1). Later in 2021, as IPAs began to focus less on retention and more on promotion of investment in new priority sectors like health, UNCTAD’s monitoring again revealed important differences in the breadth and quality of information provided by developed and developing countries’ agencies (figure 2). The annex provides a selection of digital tools used by IPAs.

Figure 1. Asymmetric online response by IPAs at the onset of the pandemic (percentage of websites and social media channels, by group of economies).

Source: UNCTAD review of online activities of 180 national IPAs between March and July 2020.

Figure 2. Amid the pandemic, persistent difference in the online activities of IPAs. (percentage of IPA websites/social media channels that featured health for investment, by group of economies)

Table 2. Digitalization is a priority for LDC IPAs. (percentage of respondents)

| Insufficient digital technology was a main challenge for the IPA during the pandemic | 71% |
| Digitalization of operations is a priority for the IPA post-COVID-19 | 79% |

Examples of digital tools developed by UNCTAD for developing countries include online investment guides (iGuides), step-by-step information portals (eRegulations), online single windows (eRegistrations), and a world index of online enterprise registration portals (GER.co index).

IPAs in LDCs cited digitalization as a current priority.

A recent needs assessment among 28 LDC IPAs reveals the digital transformation challenge that LDC IPAs are facing (table 2). IPAs from the poorest countries require support from the international community and development partners. UNCTAD regularly provides such technical assistance to governments and IPAs through digital tools that aim to increase transparency about regulatory procedures for investors, through step-by-step information portals and by providing support in the streamlining of investment processes online.³

</tr>
</thead>
<tbody>
<tr>
<td>Investment promotion</td>
<td>Answering prospective investor queries</td>
<td>Invest Estonia’s <a href="https://www.investestonia.com/investor-advisor">electronic investment advisor</a> provides semi-automatic replies to simple and complex investor queries, including tailor-made value propositions.</td>
</tr>
<tr>
<td></td>
<td>Benchmarking against other countries</td>
<td>The Foreign Investment Promotion Agency of Tunisia’s <a href="https://comparetunisia.tn/">Compare Tunisia</a> online tool allows investors to benchmark Tunisia against other countries with regards to international rankings.</td>
</tr>
<tr>
<td></td>
<td>Providing up-to-date information on the investment location</td>
<td>Online investment guides (“iGuides” – implemented in 40 countries) were designed by UNCTAD and the International Chamber of Commerce to provide investors with information on investment opportunities, business costs and the local regulatory environment for investment including labour, land, taxes, investor rights and sectoral data.</td>
</tr>
<tr>
<td>Investment facilitation</td>
<td>Facilitating site selection</td>
<td>Invest India has an <a href="https://investindia.gov.in/">online industrial land bank</a> that functions as an investible land bank with information on availability of raw material, logistics and urban infrastructure.</td>
</tr>
<tr>
<td></td>
<td>Streamlining administrative tasks</td>
<td>Invest Malaysia’s <a href="https://www.investmalaysia.gov.my">investment portal</a> is a single-entry point for companies to submit and track their applications online.</td>
</tr>
<tr>
<td></td>
<td>Supporting enterprise development</td>
<td>APEXBrasil offers an <a href="https://apexbrasil.gov.br/evi">e-commerce diagnostic tool</a> that companies can use to assess their readiness to sell and export online. It provides guidance and links to useful partners and support programmes.</td>
</tr>
<tr>
<td>Aftercare services</td>
<td>Facilitating links to local suppliers</td>
<td>The Council for Development of Cambodia developed an [online suppliers database](<a href="https://www.coup">https://www.coup</a> Blocking citation in the text for security reasons) with sustainability dimension to facilitate matchmaking between investors and local suppliers. The database has information about sustainability characteristics of selected suppliers.</td>
</tr>
<tr>
<td>and policy advocacy</td>
<td>Receiving investor feedback and grievances</td>
<td>The Republic of Korea’s KOTRA has a foreign investment Ombudsman that works to support grievance resolution of foreign investors in the country and has an <a href="https://www.kotra.go.kr/en/investor-consultation/online-grievance-application">online grievance application system</a></td>
</tr>
