IMPROVING MARKET ACCESS FOR LEAST DEVELOPED COUNTRIES

EXECUTIVE SUMMARY

Among the various initiatives undertaken at the multilateral and international level to favour LDCs' exports, the European Union (EU) proposal, originally made in the course of the preparations for Seattle by providing LDCs duty/quota-free treatment for "essentially all" products, is probably one of the most relevant. At present, the recently approved "Everything But Arms" (EBA) initiative is the most tangible implementation of such course of action. The original proposal was discussed in several forums including at the World Trade Organization (WTO), where agreement was reached that duty/quota-free treatment would be "consistent with domestic requirements and international agreements". The "essentially all" qualification of the offer may imply that some items would be excluded from the coverage of the initiative. Moreover the use of the word "consistent" with the existing requirements may imply that current rules of origin and administrative procedures will not be modified. The value of any new initiative in favour of improving market access for LDCs should be measured against the factors determining the under utilization of current trade preferences or "missed preferences", namely those granted but not utilized because of the stringent conditions attached to them and those that could be granted by the inclusion of non-covered products. The present paper contends that four basic conditions should be fulfilled by these various initiatives to improve market access for LDCs: (i) ensure security of the preferential treatment granted (e.g. to establish a commitment that imparts stability of market access to the initiative); (ii) provide full product coverage at duty-free rate, limited products exceptions may be granted duty-free tariff quotas with a scheduled phase down; (iii) harmonize and devise origin requirements matched with the industrial capacity of LDCs; and (iv) strengthen technical cooperation to maximize utilization of trade preferences.

Various options and instruments to achieve these objectives are envisaged, such as an instrument to the GATT 1994, as outlined in the paper.

Finally, this paper is limited to market access constraints, in particular tariffs and issues related to rules of origin. Supply-side constraints, determining LDCs' export capacity are not addressed, but should be taken into consideration in the context of any initiative directed at improving LDCs' participation in global trade flows.

Note

This study is part of a series of publications on market access, trade laws and preferences, published by the Division on International Trade in Goods and Services, and Commodities. This study was conceived by Mr. Stefano Inama, Project Manager, with contributions from Mr. Luca Monge Roffarello and Ms. Margherita Musollino, Experts. The opinions expressed in this study are those of the authors and do not necessarily reflect the views of the UNCTAD secretariat.

Introduction and Background

Among the various initiatives taken at the multilateral and international level in favor of least developed countries (LDCs) in the last decade, the initiative to improve market access for LDCs was first contained in the 1996 Singapore Ministerial Declaration by which the World Trade Organization (WTO) members agreed to a Plan of Action in favour of LDCs: "...including provision for taking positive measures, for example, duty-free access on an autonomous basis, aiming at improving their overall capacity to respond to the opportunities offered by the trading system".

During the preparations for the Third WTO Ministerial Conference in Seattle, the European Union formally launched a proposal¹ directed at "entering into a commitment to ensure duty-free market access not later than at the end of the new round of negotiations for essentially all products exported by the LDCs". In the same proposal, the European Union invited the most advanced developing countries to contribute as well. The European Union suggested that this arrangement could be "implemented via autonomous measures, in particular under the Generalized System of Preferences (GSP) schemes, or via bilateral and/or multilateral regimes and consideration should be given to bindings when appropriate".

The original proposal of granting LDCs improvements to market access has also been noted by other WTO members. In particular, several WTO members have so far undertaken, or expressed their intention to provide favourable treatment.² In 1998, an Ad Hoc Expert Group was convened by the Secretary-General of the United Nations Conference on Trade and Development (UNCTAD) on GSP, GSTP and new initiatives for LDCs to discuss possible avenues for improving market access for LDCs. During this meeting, some developing countries reported a number of initiatives to extend preferences to LDCs.³ At subsequent WTO meetings, other developed and developing countries also indicated that they had taken or were intending to take, additional measures to improve market access for LDCs. At the Organization of African Unity (OAU/AEC) meeting held in Algiers, in September 1999, African Trade Ministers had recommended that a decision be taken at Seattle to institute a system of tariff bindings at zero rates by developed countries in favor of LDCs.

Following the Seattle Ministerial Conference, the proposal of granting duty-free and/or quota-free for "essentially all" products was also discussed in the context of various international forums and was also included in the UNCTAD X Bangkok Plan of Action. This proposal was further considered together with other different elements of "WTO short-term confidence building measures" at the WTO General Council on 3 and 8 May 2000, where it was agreed that duty-free and quota-free treatment would be "consistent with domestic requirements and international agreements". Arguably, this qualification of the offer was designed to cover the respective concerns of the Quad countries (Canada, the European Union, Japan and the United States) in

¹ See WTO document WT/GC/2/195.

² At the High Level Meeting (HLM) on Integrated Initiatives for LDCs Trade Development, held on 27-28 October 1997, several WTO member countries provided details on existing or planned measures of enhanced market access for LDCs, namely the European Union, Norway, Morocco, United States, Mauritius, Hungary, Republic of Korea, Singapore, Canada, Japan, India, Switzerland, Thailand, Egypt, Turkey, Australia and Bulgaria (see WTO document WT/TPR/OV/6, of 22 November 2000).

³ See the "Informal Report by the UNCTAD secretariat on the ad hoc meeting of the Secretary-General of UNCTAD on GSP, GSTP and new initiatives for LDCs", held at the Palais des Nations, Geneva, from 16 to 17 July 1998, document UNCTAD/SG/AC.1/1 of 1 September 1998.

agriculture (European Union), textiles and clothing (United States and Canada) and fish (Japan).

Some of these countries have recently undertaken to provide more favorable market access conditions to LDCs and sub-Saharan African countries (35 out of 48 LDCs are African). In May 2000, the United States authorized the African Growth and Opportunity Act (AGOA)⁴, whereby the basic United States GSP scheme was amended in favour of designated sub-Saharan African countries to include a larger range of products. In particular, preferential treatment has been granted to selected apparel articles subject to special provisions, rules of origin and customs requirements. In September 2000, the Canadian Government enlarged the product coverage of its GSP scheme to allow 570 products originating in LDCs to enter its market duty-free. In September 2000, the European Union Commission announced the adoption of the expected plan to grant unrestricted duty-free access to all LDCs products, excluding arms. The Everything But Arms (EBA) proposal was recently approved and entered into effect on 5 March 2001.⁵ The original proposal was amended to provide longer transition periods for the phasing-out of customs duties on three very sensitive products, namely bananas, rice and sugar.

Following a review of GSP scheme of Japan, conducted in December 2000, the scheme was revised and extended for ten years until 31 March 2011. The revised scheme introduced, as of 1 April 2001, an additional list of industrial products originating in LDC beneficiaries that are granted duty/quota-free entry.

Although welcome, all these initiatives might not bring the desired results unless both the past experience with previous trade preferences, as well as the specific interests of LDCs are not properly reflected in their design. In particular, in the light of the past experience with several preferential trade arrangements like the GSP, LDCs have argued that, in order to be meaningful and effective, duty-free and quota-free treatment should be bound, covering all products and incorporate rules of origin requirements matched with the industrial capacity of LDCs.

Unless such conditions are met, the various initiatives currently undertaken would constitute no more than a modest improvement of current market access that LDCs are already granted under the existing GSP schemes or other preferential arrangements.

This paper also provides suggestions on ways to ensure that the actual proposals, discussed in the WTO and other international forums in favor of LDCs, result in trade preferences having the expected developmental effect. It points out that, notwithstanding the importance of expanding preferences to cover all products, product coverage itself represents only one of the several dimensions to substantially enhance market access conditions for LDCs exports. Equally, or more important, is the utilization of trade preferences and the factors currently impeding the full use of the available preferences.

In this regard, the following issues need to be addressed: (i) the form and legal modalities needed to impart stability to trade preferences granted under this initiative; (ii) the identification of products where an expansion of product coverage would be required (obviously these products are the first candidates for a meaningful expansion of market access for LDCs)⁶; (iii) the importance of rules of origin and

⁴ The AGOA, which is part of the Trade and Development Act of 2000, was signed into law by the United States President on 18 May 2000.

⁵ See Council Regulation 416/2001, OJ L60 of 1.3.2001.

⁶ In this regard, the annexes to this paper contain specific lists of products which are currently excluded from the various GSP schemes and ACP preferences, or when covered are still subject to custom duties.

other ancillary requirements in affecting the effective utilization of the preferences and how these requirements should be adapted in the light of the industrial capacity of LDCs; and possibly harmonized; and (iv) the need for providing LDCs with the necessary technical assistance aimed at increasing the utilization of trade preferences.

The analytical framework of this exercise draws from the experience gained from the various studies, recommendations and conclusions of the UNCTAD inter-governmental meeting on GSP and Trade Preferences as well as the technical co-operation activities on market access, trade preferences and rules of origin.

1. THE MAIN ISSUE: IS CURRENT PREFERENTIAL MARKET ACCESS COMMERCIALY MEANINGFUL AND ARE CURRENT PREFERENCES EFFECTIVELY UTILIZED?

The analysis of the market access conditions for least developed countries (LDCs) has been traditionally conducted on the basis of market access provided under trade preferences.⁷ Since currently available trade preferences are granting substantially better market access than Most Favored Nation (MFN) rates to LDCs, the current MFN rates of duty were not deemed to constitute a market access barrier to exports of LDCs. However, a closer look to the functioning of trade preferences may still reveal a less optimistic reality. The assumption that MFN tariffs do not represent a substantial trade barrier for exports from LDCs covered by preferential schemes and are seldom applied to their exports, is not tenable once the utilization rate of the available trade preferences is taken into account. In fact, the analysis of trade flows under the Generalized System of Preferences (GSP) appears to demonstrate that such an analytical framework largely ignores substantial underpinnings and mechanisms regulating the effective functioning of trade preferences.

The mere granting of tariff preferences or duty-free market access to exports originating in LDCs does not automatically ensure that the trade preferences are effectively utilized by beneficiary countries. Preferences are conditional upon the fulfillment of an array of requirements which, in many instances, LDCs may not be able to comply with. Similarly, the design and structure of the legal framework through which these preferences are made available to LDCs might not properly reflect LDCs' interest of stability and security necessary to attract the necessary export oriented investments to generate supply capacity.

As a result, even when a wide product coverage⁸ suggests potential benefits in terms of preferential market access to LDCs, the actual utilization of such preferences could be limited. A dear indicator of the effectiveness of trade preferences is the utilization rate. Such an indicator is the ratio of the amount of imports, which actually received trade preferences at the time of customs clearance in the preference giving country, to the amount of dutiable imports eligible for preferences. This is the most realistic measurement of the effectiveness of trade preferences.⁹

⁷ See, for instance, UNCTAD document "The Post-Uruguay Round Tariff Environment for Developing Countries' Exports: Tariff Peaks and Tariff Escalation" (TD/B/COM.1/14/Rev.1), of 28 January 2000.

⁸ Product coverage is defined as the ratio between imports that are covered by a preferential trade arrangement and total dutiable imports from the beneficiary countries.

⁹ Utilization rate, defined as the ratio between imports actually receiving preference and covered imports, can refer to all beneficiaries, to a sub-group or to single countries. Higher or lower utilization rates, on the one hand, have to do with the complexity of the conditions required to grant a product preferential treatment together with the capacity of exporters to comply with these requirements, while, on the other hand, they depend on the degree of the preferential margins offered. In the latter case low preferential margin might discourage exporters to utilize the scheme, because the cost of compliance to qualify products under the GSP might result higher than the MFN duty.

Usually, the value of trade preferences has been measured by referring to a ratio between the product coverage of the preferential schemes and the current exports of the beneficiary countries. The larger the ratio in relation to the exports from beneficiaries, the bigger the value of the trade preferences granted to the beneficiary countries. Such an approach, however, may not be an accurate measurement. First, it does not take adequate consideration that MFN zero rates should first be deducted from the coverage of preferential schemes. Thus, unless trade coverage is calculated over the exports which are “dutiabale” there might be the risk of calculating “empty preferences”. Second, there is a need to assess the value of the preferential margin in relation to the requirement of compliance with rules of origin, e.g. low preferential margin associated with restrictive rules of origin reduce the value of trade preferences. Third, and most importantly, the matching of dutiable exports with the coverage of the preferential schemes provides an indication of the potential effects of the trade preferences granted. In order to obtain more realistic and balanced results in assessing the value of trade preferences, a fourth step should be undertaken by calculating the amount of trade that actually received trade preferences as a percentage of the potential coverage, e.g. the utilization rate.

A number of elements for assessing the value of trade preferences have been outlined in this study. A forthcoming publication will address, in detail, the issue of “missed preferences” (the amount of trade preferences that have not been utilized) and identify the factors affecting full utilization of trade preferences.

As a final qualification on the methodology to be used to measure the value of trade preferences, records of high utilization rates, on average or for some product categories, do not always mean that market access at preferential rates exists and has been effective. For instance, both the United States and Canada record very high utilization rates on textile and clothing products (94.8 and 65.8 per cent respectively). However, the utility rate¹⁰ for the same products, i.e. textile and clothing, is as low as 1.8 and 0.7 per cent respectively, meaning that virtually all LDC exports have paid MFN duties when entering these markets. Thus, such a low percentage of utility ratio of the scheme in these products is a clear sign that lack of product coverage is the main problem affecting the value of the trade preferences granted under the GSP schemes of the United States and Canada rather than the utilization of the few preferences available in these product categories under the current arrangements.

Data required to calculate the utilization rate for LDCs is generally available for all GSP schemes, but not for the European Union - African, Caribbean and Pacific countries (ACP) arrangement, since the utilization data for this arrangement appears not to be available to the public. However, as a general rule, it could be reasonable to assume that it might be in line with that achieved by LDCs under other preferential schemes, particularly the European Union GSP scheme for LDCs, since both arrangements share similar requirements and basic structure.

The analysis of LDCs' GSP preferences shows that the utilization rate of most of the preferential schemes of the QUAD countries recorded a rather low performance in the last three years. Not only did average utilization rate, in many instances, not reach 50 per cent¹¹ of the value of export potentially eligible for preferences, but, this record, in some cases, has remained low over time. Therefore, considering the ratio of the potential product coverage as measurement of the effectiveness of the preferential arrangements might not provide a complete and equitable assessment of

¹⁰ Utility rate defined as the ratio of imports actually receiving preference and all dutiable imports (covered or not), refers to the percentage of total dutiable imports which receive preferences. A low level of this ratio means that a large part of dutiable imports (either covered or not) pay MFN rate.

¹¹ Average for all the QUAD GSP schemes for the latest year available of each preferential schemes

the value of trade preferences since, at the time of customs clearance, only part of the preferences offered may actually be captured by LDC beneficiaries.

On the basis of the low utilization rates recorded in some specific categories of products, it has to be assumed that, in a number of products sectors, the MFN rates and not the preferential treatment are still applicable to LDC exports.

1.1. The GSP Scheme of the European Union

Under the GSP scheme of the European Union, the value of imports from non-ACP LDCs¹², which actually received preferences, was around \$1 billion in 1999, representing roughly 30 per cent of all their dutiable exports potentially eligible for GSP preferential treatment. Since the preferential scheme provides LDC products a coverage close to 99 per cent, the finding implies that in reality more than two third of LDCs' exports (more than \$2 billions) paid MFN duties rather than receiving preferences which are, therefore, poorly utilized.

In addition, the low utilization of the GSP scheme by non-ACP LDC exports appears to have been a constant feature over the recent years. Utilization rate¹³ was 41 per cent in 1994 and improved to 48 per cent in 1996. However, a significant drop was recorded in 1997, when the rate fell to 26 per cent mainly due to the low GSP utilization rate recorded for important products like textiles (21 per cent) and for food preparations (12 per cent). Also in 1997, a better performance was recorded in the animal's products (54 per cent) and hides and skins products (79 per cent) sectors. In 1998 and 1999, similar low utilization rates were recorded (26.2 per cent and 33 per cent respectively).

The reasons behind these low utilization rates may be multifarious. Nevertheless, in 1997, the reduction was largely caused by a drop in the utilization rate of Bangladesh, which saw its preference utilization rate shrinking to 27.4 per cent from the previous year recorded level of 48.5 per cent. The drop in the GSP utilization rate of Bangladesh was mainly attributed to the complexity of the origin requirements in the textile and clothing sectors under the European Union GSP scheme.¹⁴

The low utilization recorded entailed that LDCs beneficiaries of the GSP scheme of the European Union continued to face trade-weighted MFN duty above 10 per cent¹⁵ on three-fourths of their textiles and clothing exports, around 11 per cent of MFN duty rate for half of their fish exports,¹⁶ above 20 per cent for sixty per cent of their preparations from fruit (HS Chapter 20) and around 15 per cent for virtually all LDC trade in live trees, bulbs, roots and flowers.

¹² Non-ACP LDCs include Afghanistan, Bangladesh, Bhutan, Lao People's Democratic Republic, Cambodia, Nepal, Yemen, Maldives and Myanmar (the latter has been temporarily excluded from GSP benefits). These countries are currently the only effective beneficiaries of the European Union GSP scheme.

¹³ Please refer to the tables in the Annexes for the latest coverage, utilization and utility rates (at section level) available for each QUAD Country .

¹⁴ It is reported that exporters in Bangladesh failed to understand and properly apply the complex "double jump" provision. As a result, 15,308 certificates of origin issued in the 1994-1996 period had not been in conformity with the relevant origin requirements and had had to be withdrawn, triggering the re-imposition of MFN duties. This caused heavy financial losses to importers. In order to address this problem, the European Union subsequently granted Bangladesh a derogation from the "double jump" requirement for 1998. The derogation only covered selected items and was subject to quotas. The quantitative limitations severely defeated the purpose of the derogation. Only 9 out of the 35 products covered by the derogation had been exported to the European Union market. The derogation for Bangladesh was not renewed after 1998. See Bangladesh statement at the Ad-Hoc Meeting of the Secretary-General of UNCTAD on GSP, GSTP and New Initiatives for LDCs reported in document UNCTAD/SG/AC.11, of 1 September 1998.

¹⁵ Tariffs retrieved from TARIC 1999.

¹⁶ Average tariffs for food preparations made of fish and crustaceans are above 20 per cent.

1.2. Preferences granted by the European Union to ACP countries

Although the unavailability of trade data on the Lomé utilization rate makes a precise assessment of the ACP preferences difficult, it may be inferred that the actual amount of goods effectively receiving preferences may be comparable to the levels recorded under the GSP of the European Union for LDCs.¹⁷ Both trade arrangements share similar features and complexity of requirements.

Based on this assumption, if it is considered that the utilization rate of the agricultural products in the European Union GSP scheme for LDCs is roughly 30 per cent on average (both in 1998 and 1999), the same figure may be applied, as a general rule, to Lomé agricultural trade preferences. Similar conclusion could also be extended to the actual utilization of preferences granted to textiles and clothing products. This holds particularly true when considering that the poor performance recorded for these products under other GSP schemes (utilization rate of 31 per cent and 35 per cent under the European Union and Japan GSP respectively in the latest data available for each scheme) in most cases refers to Asian LDC exporters that are considered rather competitive. Therefore, it may be considered that while product coverage may be potentially equivalent to 99 per cent, the actual amount of LDC exports effectively receiving ACP preferences might be considerably less than the 99 per cent potential coverage figure.

1.3. The GSP Scheme of Japan

In the case of the GSP scheme of Japan, the total value of LDCs trade receiving preferences was less than 30 per cent of all LDCs dutiable exports into this market mainly because some 60 per cent of their trade was not covered under the scheme, according to 1997 trade data. At a more detailed level, utilization rates vary considerably across product categories. For instance, high rates were recently¹⁸ recorded for fish products and hides and skins (almost 100 per cent). However, the finding related to fish products probably reflects a direct involvement of Japanese vessels or importers in the production and export processes of LDCs. In the case of hides and skins,¹⁹ it may well be that the applicable MFN rate is so high (above 40 per cent) that exporters have the incentive to fulfill the conditions to get the preference. A similar rationale may also explain the high utilization recorded for footwear²⁰ products (MFN average tariff of almost 40 per cent), although LDCs trade under these items is currently very low. Conversely, lower than average coverage rates are recorded for metals (24 per cent) and textiles products (35 per cent). In the first case, the low utilization rate may result from the application of ceiling administration on these product categories.²¹ Low utilization of preferences have also been recorded for textiles and clothing products.

¹⁷ As shown in the tables contained in the Annex, the market access conditions under former Lomé Convention and European Union GSP for LDCs were not equivalent. For decades, the preferences granted under Lomé conventions were more generous than those provided under the European Union GSP for LDCs. Only recently, Council Regulation 602/98 (OJ L 80, 18.3.98, p.1) granted LDCs not party to the Lomé IV Convention preferences almost equivalent to those enjoyed by signatories.

¹⁸ 1997 trade data.

¹⁹ Although under the scheme of Japan some of these products are excluded from the GSP coverage, relative high utilization figures have been recorded on specific tariff items currently covered by this scheme. See handbook on the GSP Scheme of Japan 2000/2001, UNCTAD/ITCD/TSB/Misc.42/Rev.1, pages 35 to 48.

²⁰ As above.

²¹ Utilization rates under these specific products, namely unrefined and refined copper (selected sub-headings of HS 7402 and 7403), may rise in the future given the modifications introduced in the revised GSP scheme. In fact, the low utilization rate is mainly due to exports of the Democratic Republic of Congo and Zambia, which have been subject to ceiling administration, as contained in the Handbook on the Scheme of Japan (UNCTAD/ITCD/TSB/Misc.42/Rev.1). Under the 2001 revision of the scheme, these countries have become eligible for LDC treatment, entailing the removal of ceiling to their exports. However, normal GSP applicable rates will be

1.4. The GSP Scheme of the United States of America

The utilization rate recorded in 1998 (defined as amount of trade receiving preferences against coverage rate) was rather high, at around 76 per cent, improving significantly from the previous year' rate, where a mere 25 per cent rate²² was recorded. However, an important qualification needs to be pointed out when analyzing LDCs exports under the GSP of the United States due to the overwhelming presence of minerals and in particular oils among the covered products. In fact, they account for almost 95 per cent of the covered products meaning that had these products not been considered in the calculation of the GSP coverage, the coverage ratio over the remaining dutiable exports would drop from the current 53 per cent²³ (see table in Annex I "Contrasting totals with minerals and total without minerals") to a low of 5.4 per cent.

Thus, when considering the product coverage and utilization rates, any results should be examined and contrasted with different indicators to obtain balanced results. For example, at the country level, Angola, the main LDC exporter to the United States with more than 40 per cent share of total LDC exports, through its exports of petroleum products alone account for almost 90 per cent the total amount of covered trade as well as 90 per cent of the received preferences.²⁴ Conversely, Bangladesh, the second largest LDC exporter (34 per cent total LDC exports into the United States market), accounts for only 2 per cent of both the covered and preference receiving products.²⁵

Notwithstanding this important aspect of the GSP scheme of the United States, the utilization rates recorded on the remaining LDCs exports other than minerals remains rather positive. In 1998, the utilization rate for industrial products was high (76.6 per cent on average) although the coverage rate for this category was low at less than 1 per cent (mainly because textile and clothing products are excluded by the GSP scheme of the United States) and around 71 per cent for agricultural products. However, the real value of these figures might be better understood if they were considered without oils and minerals. In this case, the absolute value of the covered products under the GSP scheme of the United States shrinks from \$2.2 billions to just \$111 millions, while the value of trade receiving preferences (e.g. the utilized preferences) falls from \$1.7 billions to \$87 millions only.²⁶

1.5. The GSP Scheme of Canada

The GSP scheme of Canada for LDCs presents some characteristics very similar to those of the United States scheme, since a large share of LDC exports (textile and clothing products) is excluded from any preferential treatment. In particular, the

applied in the fiscal year 2001 and the ceiling on these products will not be removed until the end of fiscal year 2005. Duty-free treatment for these products will be applied from fiscal year 2002.

²² This low figure, recorded in 1997, was probably due to the fact that new preferences for LDCs were made available in June 1997. Thus, the utilization rates may have been influenced by this event. In fact, utilization rate of years 1994, 1995 and 1996 have been 74 per cent, 70 per cent and 69 per cent, respectively.

²³ According to 1998 trade data, such a low coverage rate, however, appears to be constant in the United States GSP scheme, since it was 4.9, 4.7 and 1.8 per cent in 1994, 1995 and 1996, respectively.

²⁴ In a report of the United States International Trade Commission on Advice on Providing Additional GSP Benefits for LDCs, Investigation No. 332-370, of February 1997, it was actually foreseen that the inclusion of GSP benefits for energy products would have been relevant for Angola. In fact, page 2-1 of the report stated that "United States energy imports from the Least Developed Beneficiary countries are likely to grow slightly in the future as a result of recent United States investments in Angola to expand production for export". On page 2-2 of the same report, on industry instruction, it is indicated that Chevron and TEXACO announced, at that time, an estimated investment of \$700 million and \$600 million, respectively.

²⁵ Trade data for these countries refers to 1997.

²⁶ 1998 trade data.

utilization rate was 59 per cent against a product coverage equivalent to 10 per cent in 1998. The utilization rate has improved slightly over previous years when it was 46 per cent and 53 per cent in 1996 and 1997 respectively. However, when translated in absolute value, the 1998 value of export receiving preferences is limited to \$5.7 millions, equal to 6 per cent of all the LDCs dutiable exports or just 0.2 per cent the total Canadian imports receiving GSP preferential treatment (all GSP beneficiaries excluding LDCs). In actual terms, this means that LDCs' exports are faced with MFN tariffs on 94 per cent of their exports both because of lack of preferential coverage or utilization. A comparable figure of exports from LDCs still affected by MFN duties is 60 per cent in the case of the United States and around 70 per cent in the case of Japan. In addition, the distribution of the benefits of the Canada GSP scheme remains concentrated in few LDCs, with Bangladesh alone accounting roughly around 50 per cent.

1.6. Summary of current utilization of available trade preferences

For all the analyzed schemes, lower than average utilization rates are recorded for certain categories of products such as textiles and clothing (when included), food preparations, fats and oils, chemical and plastics, metals and minerals, footwear (in some of cases) and transport equipment.

Low utilization rates appear to be a crosscutting problem affecting all schemes to different degrees depending on the product category. This issue is particularly important for markets such as the European Union and, to a less extent, Japan, where limited use of the GSP scheme has been recorded in some product groups. This finding is not equally applicable in the case of the schemes of Canada and the United States. The relative high utilization rates of the GSP schemes of these two latter countries, may be misleading, since a large amount of LDC exports are currently excluded by these GSP schemes and do not receive preferences.

The preliminary analysis of the utilization rates of the GSP schemes of the QUAD countries appears to indicate that a combination of parameters has to be used in assessing the value of trade preferences. Depending on the structure of trade preferences, a first parameter is related to the ratio of product coverage provided by the scheme with the actual exports from LDCs. The second parameter is related to the utilization rate of the trade preferences. This second parameter is crosscutting since it is applicable to all schemes. As pointed out earlier, high utilization rates do not automatically mean market access since high utilization rates have been recorded in some specific sectors where the majority of the products were excluded from preferences. Hence, an additional criteria such as the utility rate²⁷ may be used to assess the value of trade preferences in combination with the utilization rate.

By and large, it is clear that LDCs might benefit consistently from new trade opportunities derived from an expansion of product coverage and a full utilization of current and future trade preferences. While much of these benefits will also depend on LDCs production capacity, the analysis of the utilization rate does bring an additional element of qualification to the traditional view that the main obstacle to expanded LDCs exports is mainly derived from limited supply capacity rather than market access.

A forthcoming UNCTAD study will attempt to provide a quantification of the trade effects that may be generated by (i) a full utilization of available trade preferences and (ii) an expansion of product coverage.²⁸ As pointed out above, the reason

²⁷ For a definition of utility rate, see footnote 10.

²⁸ To carry out both exercises, the author of this forthcoming study utilizes an adapted version of the SMART Methodology developed jointly by UNCTAD and the World Bank.

behind this differentiated exercise can be found in the fact that preferential arrangements do not share the same structure in terms of product coverage and depth of tariff cuts. Thus, the issue of utilization is mainly relevant in the case of the European Union market (and to a lesser extent Japan), given then the current trade-weighted product coverage for LDC exports is close to 100 per cent. However, expanding product coverage is essential in the case of the United States and Canadian GSP schemes, whereby a large proportion of LDC exports, primarily including most of textiles and clothing products, is currently not granted any preferential treatment. The case of Japan is at midway, since in some areas there is scope for expansion of product coverage, while in others low utilization rates have been recorded.

2. FACTORS AFFECTING THE UTILIZATION OF UNILATERAL TRADE PREFERENCES

At the outset, it has to be considered that the debates around the current initiative to grant duty-free and quota-free market access to LDCs are taking place in a trading environment where substantial trade preferences are already available to LDCs under the GSP schemes, the Cotonou Partnership Agreement (CPA) and, as of 5 March 2001, under the “Everything But Arms” (EBA) amendment to the European Union GSP scheme. Thus, a first point is to identify, the value added of this new initiative in terms of market access and what measures and innovations are required to effectively improve the market access conditions for LDCs’ products.

Over the years of the implementation of the GSP schemes, intergovernmental meetings have taken place in UNCTAD in the Special Committees on Preferences and the Working Groups on Rules of Origin. In particular, the former has been evaluating the trade effects of these arrangements on a yearly basis for more than twenty years.

Taking into account the gained experience from the debates and technical work carried out by these two committees, there are a variety of learned lessons to be utilized in implementing the proposal for greater market access for LDCs.

More specifically, there have been perennial factors affecting the effectiveness of the GSP, as well as of other preferential arrangements, including those listed below. Obviously, each one of these findings should not be considered in isolation but rather as concurrent and overlapping factors which have limited the expected trade effects and utilization of trade preferences by LDCs. These findings, which will be further elaborated in the course of this paper, are summarized as follows:

2.1. Problem 1: Lack of security of access

The lack of security of access is due to the autonomous and unilateral character of the GSP. Indeed, over the years of its operation, several changes in the level of preferences have been introduced to the GSP schemes by including/excluding products/countries for graduation reasons, or simply by revision of the schemes. Under certain schemes, quantitative limits on preferential treatment were applied limiting the predictability of obtaining preferential market access. While graduation mechanisms and quota limitations on preferential treatment have seldom been applied to LDCs, the possibility of introducing these limitations or exclusions and the uncertainty about the triggering mechanisms of these limitations have brought an element of unpredictability deriving from the built-in autonomous character of the

GSP concessions. This factor may have affected the generation of the trade dynamics and the expected Foreign Direct Investment (FDI) flows in LDCs deriving from the more generous market access opportunities made available to them when compared to other beneficiaries of trade preferences.

2.2. Problem 2: Insufficient product coverage

Although comprehensive, the product coverage granted under the various preferential arrangements to LDCs is not universal. In the case of United States and Canada, the complete exclusion of textile and clothing products from the coverage has limited the trade value of their GSP schemes. Some agricultural and fishery products are not covered under the GSP scheme of Japan.

2.3. Problem 3: Excessively stringent rules of origin with respect to the industrial capacity of LDCs

GSP rules of origin requirements often exceed the manufacturing capacity and industrial development of many beneficiary countries and represent one of the main factors determining the current low utilization of available preferences. Under most of preferential arrangements and GSP schemes, certain modalities of documentary evidence require a series of administrative steps and procedures involving issuance of certificates of origin, through bill of lading, etc. These requirements may exacerbate the cost and difficulties of meeting rules of origin and undermine the effective utilization of trade preferences. Rules of origin requirements, when associated with low preferential margins, might discourage exporters to utilize the scheme because the cost of compliance to qualify products for preference exceed the value of the preferential margin, e.g. the preferential margins are not commercially meaningful.²⁹

2.4. Problem 4: Lack of understanding or awareness of the preferences available and the conditions attached therein leading to application of MFN rates rather than preferential ones

One of the consistent findings of technical assistance activities in favor of LDCs has been the clear indication that low utilization rates are due to a combination of factors. On the one hand, the main reason for low utilization is due to the lack of knowledge of the preferential advantages available under the preferential arrangements on the part of the exporters. On the other hand, there is a need for the establishment of efficient institutions to administer and promote exports under existing preferential arrangements. Often, LDCs' exporters and trade officials are unaware of the pitfalls involved in submitting incomplete or inaccurately completed documentation such as customs declarations. They are also impeded from exporting due to associated difficulties in understanding tariff classifications and changes in such classifications and modifications or amendments made to the preferential schemes. The costs of this lack of technical knowledge, in the unnecessary payment of customs duties, rejected imports, origin verifications, unnecessary testing, spoilage, legal fees and foregone opportunities in general, can discourage even important exporters in preference-receiving countries, as well as those just entering the market.

²⁹ See J. Herin, "Rules of origin and differences between tariff levels in EFTA and in the EC", occasional paper No. 13, EFTA secretariat, 1986.

In addition to these trade-related factors, the effectiveness of preferential regimes is also affected by two constraints that can hardly be addressed by trade-related instruments:

- Lack of export capacity or supply. It has often been quoted in various analyses on the value and trade effects of trade preferences granted to LDCs, that one of the main reasons for the limited export performance and utilization of these preferences is represented by the supply constraints of the LDC beneficiaries. Obviously, supply constraints are one of the main obstacles for the full utilization of trade preferences. However, the conventional wisdom that market access is not a major issue for LDCs should be revisited in the light of the utilization rates and the points made in this study. In fact, if one considers that a major part of current LDC exports still face MFN duties in spite of the available preferences, action should be taken to eliminate the remaining obstacles to full access by expanding product coverage and increasing utilization rates of available trade preferences.
- Non trade-related conditionalities. In the case of the GSP scheme of the United States, certain non-trade related conditionalities linked to the eligibility or the maintenance of beneficiary status have existed since its inception. Most recently, the European Union has introduced similar conditionalities under its own GSP scheme, which will be also applicable under the EBA amendment. Non-trade related conditionalities have affected the eligibility of LDCs in the past and continue to do so.

3. OPTIONS AND STEPS TO BE TAKEN FOR IMPROVING MARKET ACCESS BY ADDRESSING SOME OF THE PROBLEMS AND FACTORS IDENTIFIED ABOVE

3.1. Addressing problem 1: Lack of security of access

The lack of security of access has been limiting the trade effects and implementation of unilateral trade preferences for more than two decades. This situation should be corrected through a new arrangement imparting stability and predictability to the new initiatives in favor of LDCs by making the trade preferences contractual and by assuring the maximum of security for the duty free access so provided.

However, the wording which emerged during the last WTO General Council and the initiatives undertaken by Canada, the European Union and Japan seem to indicate that the implementation of the initiatives in favor of LDCs will be undertaken within the framework of their existing GSP schemes. Obviously, this course of action will not solve the aspect of predictability and non-trade related conditionalities, unless specific provisions are included ensuring stability of preferential treatment. An important example can be found in the recent EBA amendment to the GSP scheme of the European Union, whereby the duty/quota-free treatment will be maintained for an unlimited period of time and will not be subject to the periodic European Union GSP renewals³⁰.

A substantial improvement and increased stability to this course of action would be represented by a set of multilaterally agreed criteria to be adhered strictly by all preference-giving countries in the operation of their preferential schemes. This option

³⁰ See article 7 of Regulation 416/2001.

might entail, for instance, the drafting of a WTO-consistent instrument containing the multilateral rules that are required to ensure: (i) predictability, (ii) full coverage, and (iii) harmonized rules of origin and ancillary requirements matching the industrial capacity of LDCs.³¹

The experience gained in preferential trade so far appears to support the view that only a newly designed binding arrangement, possibly within the WTO legal framework, stands a better chance of addressing the current problems of stability and predictability of trade preferences as they are related to the unilateral and autonomous characteristic of the current arrangements.

Within this latter perspective, there might be a variety of options and legal instruments to make the trade preferences contractual thus binding a duty free and quota free access treatment for LDCs exports.

A first possible solution to bind the new tariff preferences in favor of LDCs, outside the framework of the GSP, would appear to be an amendment to articles I and II of GATT 1994, according to the procedures established in article X.1 of the Marrakech Agreement establishing the WTO. The binding under article II of the tariff concessions would also entail the application of all other WTO disciplines, such as safeguards, dispute settlement, compensation for modification of schedules. This would impart a high degree of stability and predictability of such concessions.

However, an amendment to articles I or II of GATT 1994, although providing probably the best option to ensure stability of preferences, might turn out to be a difficult and time-consuming process, given that any amendment of article I of GATT requires unanimous acceptance.

A second possible solution to accommodate a preferential trade arrangement in favor of LDCs outside the GSP but within the WTO legal framework would be for members to agree on a joint action according to article XXV of GATT 1994.

This course of action may appear to be suggested by footnote to paragraph 2 of the Enabling Clause (Decision of 28 November 1979 on Differential and More Favorable Treatment, Reciprocity and Fuller Participation of Developing Countries), which provides that members should consider a joint action under article XXV of GATT 1994 to accommodate other proposals for differential and more favorable treatment in favour of LDCs. The footnote states that “it would remain open for the CONTRACTING PARTIES to consider on an ad hoc basis under the GATT provisions for joint action any proposals for differential and more favourable treatment not falling under the scope to of this paragraph”. Accordingly, this would seem to constitute an invitation to the WTO members to devise an appropriate solution that would provide a contractual framework for duty free treatment in favour of LDCs. In fact, in a similar instance, a waiver solution had to be adopted to allow developing countries to grant special preferences to LDCs, since the Enabling Clause only provides for tariff preferences under the GSP or GSTP framework or regional arrangements for the mutual reduction or elimination of tariffs.

According to this approach, security of access could be achieved by providing an instrument with provisions that would impose specific disciplines over any action that could frustrate the duty-free access. These would encompass sanitary and phyto-Sanitary (SPS) measures, technical barriers to trade (TBT), stringent safeguard provision, (based on the WTO Agreement on Safeguards) subject to multilateral surveillance, and special treatment with respect to other “trade remedies” based on the relevant WTO agreements, such as injury thresholds that would preclude the

³¹ For the monitoring and implementation of this declaration UNCTAD may be called to establish an ad hoc working group.

possibility of imports from LDCs being subject to anti-dumping or countervailing duties, except under the most extraordinary circumstances.

3.2. Addressing problem 2: Insufficient product coverage to be solved through an expansion of product coverage and duty free treatment to all products of the Harmonized System

3.2.1. The case for expansion of product coverage

A preliminary analysis³² of the preferential trade arrangements available for LDCs' exports clearly reveals that in certain QUAD countries, such as the United States, Canada and to a less extent Japan, a consistent part of the LDCs trade still remains outside any preferential treatment. Thus, there is substantive scope for expansion of preferences. The percentage of dutiable LDC exports excluded by preferences is as high as 90 per cent in Canada, 59 per cent in Japan and relatively better in the United States (47 per cent). However, the percentage of the excluded products in the United States is as high as 95 per cent when the value of dutiable exports from LDCs of minerals and oils is excluded from the total LDC exports.

Therefore, if some improvements are to be achieved in terms of higher gains for LDCs exports under the current duty-free quota-free initiative, any future expansion of market access should cover these excluded products.³³

This is certainly the case for textiles and clothing products in the United States and Canada since, given the actual export composition of LDCs' export in these markets, the current coverage and utilization rate of the GSP scheme relates to a very small fraction of their actual trade. In the case of Japan, although some improvements were recently made to the GSP scheme for LDCs by including a specific list of products at duty-free rate (such as fabrics of cotton and silk and other special woven fabrics), a substantive number of products of export interest to LDCs remain excluded, particularly in the agricultural sector.³⁴

3.2.2. The GSP Scheme of the United States of America and AGOA preferences

In the GSP scheme of the United States, textiles products of HS Chapters 61 and 62 (articles of apparel and clothing, knitted, not knitted or crocheted /not crocheted) alone make for 92 per cent of the uncovered part, which becomes 99 per cent once footwear and other textile products are included. These products, although important for LDCs (36 per cent of their exports in this market), are currently excluded by the scheme. Other products of interest to LDCs, which are partially excluded, are hides and skins (16 per cent coverage) and wood (89 per cent coverage), although their combined trade value was just 0.4 per cent of total LDC exports in 1998.

For textile and clothing products, LDCs' exporters are subject, on average, to a trade-weighted tariff of 15.20 per cent³⁵, while for certain footwear articles, which are considered very sensitive products, the figure is around 35 per cent. The beneficiary country that is mostly affected by this exclusion is Bangladesh, since it supplies almost 90 per cent of the 20 main products excluded by the scheme,³⁶ as well as Nepal. Other countries that are partially affected by the tariffs applicable to excluded

³² An extended analysis is contained in a comprehensive UNCTAD forthcoming study on LDCs exports market access in the QUAD countries.

³³ A full list of non-covered products is provided as Annex II to this paper.

³⁴ For the list of products which remain excluded even after this improvement, see the annex on Japan.

³⁵ Weighted average of ad valorem tariffs, not including the applicable specific rates (2000).

³⁶ These 20 products account for 70 per cent of the uncovered LDCs exports.

products are Yemen (articles of stone), Madagascar (some textiles and wood products) and Nepal for products like hides and skins.

It is quite evident that, given the current export structure, any future improvements of the scheme will have to extend, partially or totally, preferential treatment to these uncovered products to improve market access conditions for LDCs' exports.

The "African Growth and Opportunity Act" (AGOA) product coverage does include apparel articles for 30 African LDCs. However, the rules of origin and quota limitations attached to the concession and eligibility requirements may diminish the value of this preferential arrangement. Under the AGOA apparel provisions, duty- and quota-free treatment is granted to apparel originating in designated sub-Saharan African countries only if made from United States yarn or fabrics. Apparel made out of African/regional fabric can be exported duty free to the United States, subject to an annual cap of 1.5 per cent in the first year, which is increased annually over an 8-year period, by equal increments, rising ultimately in the last year, up to a maximum of 3.5 per cent of total annual apparel shipments to the United States.

Besides this general provision, a special treatment is granted to LDC designated beneficiaries, allowing them to export apparel made from third-country fabric (non-United States and non-African) for the first four years of implementation, e.g. through September 2004. However, this privilege is subject to the same annual quantitative limitations as above. Such annual quantitative limitations currently referred to as "cap" apply to all garments either assembled from African/regional fabric or garments assembled in LDCs from third-country fabric.

The fact that this general cap is administered on a first-come, first-served basis and that is cumulative i.e., does not make distinction between LDC suppliers and non-LDC suppliers, may cast doubt about the ability of the LDC to take advantage of the cap since they will have to compete with other AGOA countries like South Africa.

In addition, in order to become eligible, countries are required to adopt an effective visa system and enforcement mechanism for protection against illegal transshipment. Although a substantial number of LDC sub-Saharan African countries were declared eligible in October 2000, the procedures for fulfilling the visa system, may imply, in certain cases new legislation to be adopted in beneficiary countries to specifically prevent illegal transshipment. At the time of this writing, only Madagascar, among LDCs, appears to have fulfilled such requirements.³⁷

The combination of these rather complex origin, visa and quota system requirements, applicable under the AGOA, may, on the basis of the experience gained with the utilization of the GSP preferences, limit the trade impact of these concessions and their utilization by beneficiary countries.

3.2.3. The GSP Scheme of Canada

The preferences provided to LDCs' exports by the GSP scheme of Canada are very similar to those of the GSP scheme of the United States since a large amount of LDC exports and, in particular, textiles and clothing remain excluded by any preferential treatment. Textile and clothing products alone make for the bulk (95 per cent) of LDC exports facing MFN duties as high as 20.5 per cent³⁸ on average. Other products largely excluded by the scheme are footwear (27 per cent product coverage), though their trade value is not very significant (less than 1 per cent of LDC exports).

³⁷ See the list of AGOA eligible countries published on the AGOA web site: www.agoa.gov.

³⁸ Tariffs of 2000.

In September 2000, the Canadian Government extended the product coverage of its GSP scheme in favor of LDC exports, by including an additional list of 570 products previously excluded by the GSP scheme. However, the new initiative does not provide additional preferences to textiles and clothing products. If the additional list of products is matched with trade, it covers a fraction of LDCs export totaling \$167,000 in 1997, since just 15 out of the 570 newly included products recorded some trade from LDCs in that year. Limited improvements in the Canadian market access appear to accrue to wine and to a less extent fish (lobsters) and mushrooms. Hence, these improvements may not produce significant changes to the current structure of the GSP for LDCs' export since, without textile and clothing products, the amount of LDCs trade excluded by preferences shrinks to less than 5 per cent.

As in the case of the United States, it is only the inclusion of textile and clothing products for preferences under the GSP that might determine a real difference to the market access of LDCs products. This holds particularly true when considering also the current high level of the MFN duties applicable to these products.

3.2.4. The GSP Scheme of Japan

In the case of the GSP scheme of Japan, the amount of LDC trade not covered by preferences still accounts for some 60 per cent of LDC dutiable exports, including products such as fish, minerals³⁹ and some vegetables. All products not covered, except fish, currently face a trade-weighted MFN average duty close to 10 per cent.⁴⁰

More specifically, LDC exports that are not covered by the scheme, such as pumpkins, certain varieties of beans and cucumbers, as well as roots and tubers, are subject to an average MFN duty of 8.5 per cent.⁴¹

Limited product coverage, of around 35 per cent, is provided to animal products and fish. Yet, it has to be noted that, although fish products account for 62 per cent⁴² of the total dutiable LDCs' exports, they are subject to a trade-weighted MFN average rate which is currently rather low at 2 per cent.

Conversely, specific products of LDCs interest,⁴³ such as, tea, leather articles, footwear and prepared food, are not covered and are attracting high duties in the Japanese market.⁴⁴

As stated above, the 2001 extension and revision of the Japanese GSP scheme has introduced a positive list of agricultural and industrial products for the exclusive benefit of LDC beneficiaries at duty- and quota-free rate. However, an early assessment of this list indicated that market access for LDC agricultural exports has not been radically improved and that some products/sectors are still not covered under the specific list for LDCs. Some improvements have been made by reducing the number of items in the negative list.

3.2.5. The GSP Scheme of the European Union

Before the introduction of the EBA amendment, which substantially improved the market access conditions of LDCs, the extremely high trade-weighted coverage (99.9

³⁹ For minerals ad valorem equivalents of product specific duties were not available.

⁴⁰ Ad valorem duty only (tariff 1999, trade 1996).

⁴¹ All trade weighed MFN rates refer to tariffs applicable in 1999 matched with trade from 1996, the latest trade data available at such disaggregated level.

⁴² LDC fish exporters to Japan number, among others, Mauritania, Bangladesh, Myanmar, Salomon Islands and the United Republic of Tanzania.

⁴³ Tariff rate of 1999.

⁴⁴ See annex on Japan.

per cent)⁴⁵ appeared to provide little scope of improving market access for LDC products. However, a closer analysis of the preferential treatment provided under the Lomé/Cotonou and former GSP trade revealed that the product coverage and preferential rates granted to LDCs were not necessarily equivalent to duty-free access.⁴⁶

The structure of the duties applicable to imports into the European Union is extremely complex. Many agricultural products face a combination of ad valorem and specific duties depending on the specific agricultural product and on its components, e.g. the duty varies according to the presence or not, in different percentages, of certain ingredients/inputs. For example, many tariffs applicable to products of the food industry (sugar confectionery, cereals preparation, chocolates, etc.) vary according to the content of sugar and milk fat contained therein. In addition, entry prices (and relative tariffs) are applicable to imports of vegetable and fruit products. Thus, exports may face different duty rates in relation to the time period in which they are exported to the European Union. Similarly, for some products such as meat and dairy products, cheese, tomatoes, mandarins and some cereals, preferences under the Lomé/Cotonou Agreement were limited by ceilings or tariff quotas. Finally, four agricultural products, namely banana, beef, sugar and rum are covered separately by specific regulations in protocols.⁴⁷

The Addendum to this study provides evidence that the wide product coverage provided by the European Union under the Cotonou Agreement and the pre-EBA GSP for LDCs is not equivalent to full product coverage/duty-free access. More specifically, the table therein contains a list of products where there was considerable scope in eliminating all specific duties in the agricultural sector, by abolishing or reducing the entry-price system and removing the remaining tariff quotas applicable under the Cotonou Agreement.

The recently adopted EBA amendment to the European Union GSP scheme appears to go in this direction by expanding considerably the preferential market access granted to LDCs beyond the preferences provided by the Cotonou Partnership Agreement (CPA) and the European Union GSP for LDCs. Under EBA, all products will be admitted duty and quota-free for an unlimited period of time, excluding bananas, sugar and rice where customs duties will be phased out over a transitional period.⁴⁸ All dutiable products that were previously granted only a margin of preference or were subject to quantitative limitations are now given duty/quota-free treatment. Most importantly, the initiative abolishes the specific duties⁴⁹ that were previously applicable for certain categories of agricultural and processed foodstuffs under both the CPA and the GSP.

Another important feature of the EBA is the stability imparted to these preferences. In fact, even if the EBA is an integral part of the European Union GSP scheme, its duration is not subject to the periodic GSP reviews, neither to time-limits. By the same token, the initiative is subject to all the disciplines and various limitations of the

⁴⁵ Trade-weighted coverage is given by matching a covered product with LDC trade (this is the main indicator utilized in the study to assess the relevance of the preferential schemes for LDCs).

⁴⁶ A detailed analysis of the preferences granted under Lomé/Cotonou agreements will be contained in a forthcoming UNCTAD publication.

⁴⁷ However their relevance for ACP LDCs is limited to Somalia (bananas), Madagascar (beef and sugar) and Malawi, Uganda and the United Republic of Tanzania (all for sugar).

⁴⁸ The phasing-in periods for bananas is 2002-2006, for sugar 2006-2009 and for rice 2006-2009. However, a duty-free quota on sugar and rice, based initially on the best figures for LDC exports during the 1990s, will be immediately made available to LDCs. These quotas will then be increased by 15 per cent each year in order to ensure effective market access for LDCs in the European Union market during the interim period.

⁴⁹ See article 6 of Regulation 416/2001.

GSP scheme, such as the unilateral and unbound character of the GSP, the provisions on temporary withdrawal of the preferences (article 22 of Regulation 2820/98, especially reinforced by the EBA amendment itself), strengthened safeguard provisions⁵⁰ and rules of origin.

In particular, the current initiative does not bring any improvement in the field of rules of origin since current GSP rules are still applicable. Thus, given the cumulation regime applicable under GSP, some ACP/LDCs may be placed in an unfavorable situation in respect to the cumulation regime granted to LDCs under the CPA (see the paragraph below on the different cumulation systems).

Given the absence of improvements in the field of origin, the low utilization rate recorded under the European Union GSP scheme may also feature under this recent initiative.

3.3. Addressing problem 3: Excessively stringent rules of origin by harmonizing and matching origin requirements with the industrial capacity of LDCs as well as simplifying ancillary requirements

Throughout the three decades of existence of the GSP, the UNCTAD Working Group on Rules of Origin followed by the Special Committee on Preferences have been addressing the GSP rules of origin with a view to harmonize the different origin systems and then to simplify them. During these debates, the shortcomings of the origin systems and consequent obstacles to GSP utilization have been identified and discussed. In addition, other findings related to the difficulties in fulfilling origin requirements emerged in the course of technical cooperation activities.

Although the need for improvements was recognized and some progress has effectively been made regarding some specific provisions of individual schemes, major problems in fulfilling the origin requirements still persist after almost thirty years since the inception of the first set of GSP rules of origin.

In an era of globalization and fast moving changes in the world economy where revolutionary changes in the production processes and technological progress have taken place, the GSP and other preferential rules of origin have remained unchanged and untouched by these events, making preferential rules of origin one of the few trade instruments passing through several rounds of trade talks unscathed.

At present, the main shortcomings encountered by preference-receiving countries with rules of origin requirements remain almost the same as those encountered and discussed in the first UNCTAD Working Groups on rules of origin of late seventies and can be grouped under the following main headings:

- (a)** Over restrictiveness of the basic origin criteria to permit the use of imported materials and components in relation with the industrial capacity of the beneficiary countries;
- (b)** The frequent additional requirements further restricting the use of third-country inputs attached to process and percentage criteria, such as requirements for “double jumps” instead of a simple change in tariff positions, the specification of components or additional inputs, which have to originate in the beneficiary country and the like;

⁵⁰ See article 4 of Regulation 416/2001.

- (c) The diversity of rules applied by preference-giving countries with respect to the basic criteria (e.g. process and percentage criteria); the differing versions of the percentage criteria or requirements in virtually all GSP origin system; the difficulties in calculating allowable and non allowable costs incurred in the production as well as the substantial differences between individual schemes regarding additional origin requirements. These differences create difficulties for exporters, as products may qualify in one preference-giving country, but not in a neighboring market, which may cause additional administrative adjustments;
- (d) The limited recognition of rapidly expanding economic cooperation and trade among developing countries generally and sub-regional integration in particular, which would require generalization of cumulation; the limited qualitative scope of cumulation allowing not for full cumulation but, in some cases, only for partial or diagonal cumulation; the geographically limited scope of cumulation sometimes restricting cumulation to few countries.
- (e) The detailed and complex ancillary origin criteria, direct consignment requirements, administration, documentation and verification, which may imply substantial additional cost for GSP transactions.

The capital importance and the role played by rules of origin in determining market access in preferential trade has recently been reconfirmed during the negotiations of major free trade areas in North America, Africa, as well as in Latin America demonstrating that rules of origin in preferential trade agreements are an independent trade policy instrument regulating market access as much as tariff concessions.⁵¹ Generous product coverage and duty free access concessions granted under unilateral preferences or negotiated under RTAs may be simply nullified if rules of origin requirements do not tally the industrial development of the beneficiary countries.

In the case of LDCs, rules of origin have largely demonstrated to be, at both the analytical and empirical level, the main obstacle to a better utilization rate of the available trade preferences on industrial products. Rules of origin that are overly strict and unsound from the point of view of industrial development represent the main market access constraint for LDCs' industrial products and processed foodstuff. In some cases and for certain categories of products an analysis of the utilization rate of some GSP schemes suggests that the origin requirements are largely responsible for the nullification of the trade preferences and the application of MFN rate for at least three quarters of LDC exports.⁵²

In addition, the implications of their requirements may have acted as disincentives to foreign direct investments (FDI) that trade preferences were originally designated to boost. For example, current origin rules require a vertical model of multi-processing manufacturing stages to be conducted in the same country. This may have the perverse effect of discouraging potential investors that, in order to comply with such rules, should invest in production lines and range of products no longer remunerative or having a comparative advantage.

As pointed out earlier, in some cases the requirements of the GSP rules of origin have remained unchanged since the 1970s when they were conceived with an

⁵¹ See UNCTAD document "Globalization and the international trading system – Issues related to rules of origin", UNCTAD/DITC/TSB/2, 24 March 1998. See also Luis Jorge Garay and Antoni Esteveordal, "Protección, desgravación preferencial y normas de origen en las Americas", in *Integración y Comercio*, 1998.

⁵² An analysis of the trade data on utilization rate of the European Union GSP for non ACP-LDCs indicates that three-fourths of their textile and clothing exports have not received GSP treatment although fully covered. The explanation for this low utilization rate can be found in the experience of Bangladesh, as described in paragraph 1.1, footnote 14, above, as well as in this section.

industry policy and production technique, based on vertically integrated structure of the manufacturing chain. At present, the production of competitive products on a global scale demands a combination of production factors and inputs from a variety of sources to produce an output that is optimal in terms of cost, quality and suitability for different markets. Existing rules of origin, by limiting the capacity of outsourcing inputs and demanding vertically integrated production chains may reflect uncompetitive and inefficient industrial models.

Paradoxically, while tariff preferences were originally conceived to promote industrialization, at present the rules of origin attached to them may have the perverse effects of promoting obsolete models of industrialization applicable in the preference giving countries at the time when such origin requirements were first conceived.

A valuable example of such a paradox may be drawn from the rules of origin requirements applicable in the textile and clothing sector. Generally, the rules of origin in this particularly sensitive sector require specific working and processing operations to be carried out on imported inputs in order for the final product to acquire originating status. The following table contains an overview of the various origin criteria applied under different trade arrangements by major trading partners, which are explained in detail in the paragraphs below.

Origin requirements for apparel articles in HS Chapter 62

COUNTRY	PROGRAM	ORIGIN REQUIREMENTS for Chapter 62	SPECIAL PROVISIONS FOR LDCs
EUROPEAN UNION	GSP (EBA) ACP Bilateral Free Trade Agreements (EuroMed, European Union-South Africa ...)	Manufacture from yarn ("double jump": from yarn to fabric and from fabric to apparel) <i>Partial Regional Cumulation</i> under GSP (ASEAN, SAARC, CACM, Andean Group) <i>Full cumulation for ACPs under Lomé/Cotonou</i>	GSP Derogation (Lao People's Democratic Republic, Nepal, Cambodia, for selected products, within quotas, subject to annual review): Manufacture from fabric ("single jump") <i>originating</i> in ASEAN, SAARC, ACP countries
UNITED STATES	AGOA	Manufacture from United States' fabrics and yarns (Duty/Quota-Free) Manufacture from sub-Saharan African fabrics wholly formed from the United States or sub-Saharan African yarn (Duty-Free within CAP)	Manufacture from fabric ("single jump"): – until 30.09.2004 – Duty-Free within CAP
	NAFTA	Manufacture from fibers ("triple jump": from fibers to yarn, from yarn to fabric, from fabric to apparel)	
JAPAN	GSP	Manufacture from fabrics ("single jump")	
SADC	Free Trade Area	Manufacture from yarn ("double jump": from yarn to fabric and from fabric to apparel)	Laying out and cutting of uncut fabric; assembly of cut components by stitching or other appropriate methods; necessary finishing, including addition of trim and other findings, washing and pressing etc.; and packaging of finished items – For exports from MMTZ to SACU – within quotas – until 2005

The production chain for articles of apparel of cotton, not knitted or crocheted of HS chapter 62 (from the raw material to the finished product) may be summarized as follows:

- (1) carding and combing of raw cotton (HS 5201) ® carded or combed cotton (HS 5203);
- (2) spinning of carded or combed cotton ® cotton yarn (HS 5205-5207);
- (3) weaving of cotton yarn ® woven fabrics of cotton (HS 5208-5212);
- (4) making up, e.g. cutting, stitching and finishing operations ® apparel article (ex HS 62).

The rules of origin for products classified under HS Chapters 62 (clothing articles) under the European Union current preferential trade arrangements require that when imported input are utilized, the manufacturing process of apparel should start from yarn. Thus two processing operations (weaving and making up – "double jump") are required to be carried out in the exporting preference-receiving country.

Textile and clothing products have been statutorily excluded from the coverage of the GSP scheme of the United States until the recent adoption of the AGOA initiative in favor of designated sub-Saharan African beneficiaries. The rules of origin applicable to apparel articles under AGOA are rather strict, since the trade benefits are substantially contingent on purchases of inputs from United States textile firms. Only for LDC beneficiaries and for the first four years of implementation, a "single jump" rule applies. This is subject to annual quantitative limitations, whereby the fabric can

be imported from non-USA, non sub-Saharan African countries. In the NAFTA context, the rules of origin for apparel and clothing products are even stricter, since not two but three processing stages are required (“triple jump”), e.g. the manufacture must start from fibers, and the performance of spinning weaving making up operations is required.

The difficulties encountered by developing countries and especially LDCs in fulfilling the double transformation rule for textiles and clothing products have been widely debated since the inception of the first set of preferential rules of origin.⁵³ The current initiative for the granting of duty-free, quota-free access to QUAD markets can only trigger more effective results in terms of utilization of the enhanced preferences by LDCs. This will only be possible if, among other things, the double-stage processing origin rules for this relevant industrial sector are amended by adopting modern and appropriate rules of origin.

The most recent negotiations on non-preferential rules of origin in the context of the World Customs Organization/World Trade Organization (WCO/WTO) and recent initiatives in the field of preferential rules of origin have demonstrated that, besides the mere production stages of the textile and clothing sectors, there are other significant manufacturing operations that may be origin-conferring, either stand-alone or taken in combination.

For instance, manufacturing processes like bleaching, printing, dyeing, coating, laminating, preparing for spinning, mercerizing, texturing or bulking, production of mixed or rubberized fabrics with cotton and man made fibers, have developed over the years in response to fashion trends and technological progress to produce new and competitive fabrics and clothing. Some of these processes may not be qualified as minimal processing since they may require sophisticated production techniques and should not be disregarded when considering origin conferring requirements

As pointed out above, the current preferential rules of origin require double or even triple manufacturing stages to achieve substantial transformation. It is however striking to find that the same concept of substantial transformation lying at the core of the current negotiations on non-preferential rules of origin is not translated into manufacturing stages but rather in assembly operations. In fact, the current text of non-preferential rules of origin for clothing articles ex HS Chapter 62 provides for the goods to undergo assembly in a single country, e.g. all of the assembly operations following the cutting of the fabric of the parts must be performed in that single country. The rule in this case provides for the manufacture to start from parts, e.g. from cut fabrics or parts of garments knitted to shape.

Such a wide difference in origin-conferring operations between preferential and non-preferential origin systems can only partly be explained by their different purpose, since they have been conceived and negotiated starting from the same concept of substantial transformation and in the case of non preferential rules of origin, neutrality.

In any case, taking into account the wealth of technical and innovative work carried out on rules of origin during the negotiations in the WCO Technical Committee on Rules of Origin, the vision of single, double or triple processing stages is simplistic and may, in certain cases, not take into account processing which may imply significant value added and labor skills. An industrial vision centered on such production stages may not fully reflect the interests of the LDCs’ textile industry in concentrating their efforts in certain market segments when certain specific manufacturing operations may bring higher value added. Rules of origin should

⁵³ See UNCTAD document “Compendium of the work and analysis conducted by UNCTAD working groups and sessional committees on GSP rules of origin”, part I, UNCTAD/ITD//GSP/34, 24 February 1996.

follow, to the extent possible, a modern vision of the textile and clothing industry which may take into account other production techniques, without being exclusively based on a vertical concept of spinning-weaving-making up.

The necessity to ease the origin rules for textiles and clothing was first recognized in 1993 under the Japanese GSP scheme when the rules were modified by switching from a two-stage requirement to a single manufacturing one.

Another relevant and recent example of the recognition of the need to grant special treatment in this area to LDCs can be found in the amended Protocol on Trade of the Southern African Development Community (SADC), whereby the South African Customs Union (SACU) has agreed to apply, for the first five years from the implementation of the Protocol,⁵⁴ a “single jump” rule to selected textile and clothing products exported by the LDC members, namely Malawi, Mozambique, the United Republic of Tanzania and Zambia, subject to annual quota limits. The SADC special origin requirement for LDCs differs from the European Union non-preferential rules because it includes the process of laying out and cutting of uncut fabrics.

3.3.1 Cumulative origin systems and their implications for LDCs

Normally, rules of origin, in the context of autonomous or unilateral contractual preferences, must be complied with within the customs territory of a single beneficiary country. The concept of cumulative origin introduces an element of liberalization by enlarging the customs territory of a beneficiary country to the territories of other countries, e.g. materials or parts imported from other beneficiary countries are considered domestic input and not foreign input.

As far as qualitative aspects are concerned, three kinds of cumulation are used in autonomous or unilateral trade preferences:

- (i) Full cumulation;
- (ii) Diagonal or partial cumulation;
- (iii) Bilateral cumulation or donor-country content.

As far as quantitative aspects are concerned, the concept of cumulation is linked to geographical extension of its scope of application, e.g. all beneficiary countries under the Canadian GSP scheme, or only selected regional associations under the GSP schemes of the United States and the European Union.

The most delicate and complex differences relating to the concept of cumulation belong to the distinction between full and partial cumulation. This distinction has decisive economic effects on the functioning and utilization of trade preferences.

Some relevant examples might better clarify the existing possibilities and differences among cumulation systems.

3.3.1.1 Full cumulation

Generally, full cumulation of origin allows more scattered and divided-labor operations among the beneficiary countries since, in order to fulfill the origin criteria, the distribution of manufacturing operations may be carried out in any beneficiary country (either all beneficiaries or selected regional groupings) according to business exigencies, e.g. working or processing may start in A, continue in B and finish in C

⁵⁴ The implementation of the SADC Trade Protocol containing, among other things, the schedules of tariff reduction, a revised set of rules of origin, an agreement on trade in sugar and a detailed regulation on the settlement of trade disputes among SADC members, started on 1 September 2000. At the time of writing, Mauritius, Botswana, Lesotho, Swaziland, Zambia and South Africa had deposited their instrument of implementation.

according to a cost/benefit analysis. This approach seems to match the globalization and interdependence of production.

The Cotonou trade regime maintains the Lomé donor-country content and full cumulation system,⁵⁵ which allow an ACP country to regard products that are wholly obtained in the European Union, in the overseas countries and territories (OCT) or in any other ACP country as having been wholly obtained in the exporting ACP country. In addition, any working or processing carried out in the European Union, in the OCT or in any other ACP country is regarded as having been carried out in the exporting ACP State. Under full cumulation, all ACP States are considered, for the purposes of origin determination, as being one single customs territory.⁵⁶

Under the United States and Japanese GSP schemes, a system of full regional cumulation applies. ASEAN member countries, for example, are considered as a single customs territory for origin purposes.⁵⁷ Therefore, all processing and manufacturing operations performed in an ASEAN country, irrespective of whether the inputs acquire origin or not, will be considered local content.

3.3.1.2 Partial cumulation

Under a system of partial cumulation, different manufacturing operations carried out in different beneficiary countries may not be simply cumulated or combined to meet the requirements laid down by the product-specific rules.

For instance, under its GSP scheme, the European Union applies a system of partial regional cumulation to countries belonging to the following four regional associations: ASEAN, SAARC, CACM and Andean Group. Under these rules,⁵⁸ materials or parts imported by a member country (A) of one of these four groupings from another member country (B) of the same grouping for further manufacture are considered domestic inputs of member country (A) and not as third-country inputs, provided that the materials or parts are already “originating products” of member country (B). Originating products are those that have acquired origin by fulfilling the individual origin requirements under the European Union product-specific rules of origin for GSP purposes.

Under this kind of cumulation, only those parts or materials that already originate in another country of the regional association can be considered local content when utilized for further manufacturing or being incorporated into the finished product, manufactured in the exporting member country.

A system of partial cumulation entails higher valued-added or more complicated manufacturing processes to be performed in one single country in order for cumulation with other beneficiaries to be granted. In the view of preference-giving countries, a partial cumulation system may be able to attract more capital-intensive investments, accompanied by improved technical know-how and labor skill.

⁵⁵ See articles 2 and 6 of Protocol 1 on rules of origin to the CPA Agreement.

⁵⁶ ACP countries are also granted an expansion of the concept of regional cumulation through the inclusion of “*neighboring developing countries belonging to a coherent geographical entity*” (Article 6, paragraph 11, of Protocol 1). In addition, a qualified cumulation system is allowed with South Africa. According to the discipline provided in Article 6, paragraphs 3 to 10, whenever materials *originating* in South Africa are used in the manufacture of a product in an ACP State, such materials are regarded as originating in the ACP only if the value added there exceeds the value of the South African materials. If this is not the case, the product concerned shall be considered as originating in South Africa.

⁵⁷ Except that Brunei Darussalam and Singapore have been graduated out of the United States GSP programme.

⁵⁸ See articles 72, 72a and 72b of the European Community Customs Code (ECCC), as last modified by Commission Regulation 1602/2000 (OJ L 188, 26.07.2000).

3.3.1.3 Implications of different cumulative systems

A system of partial regional cumulation entails that in the case of multi-country manufacturing a specific rule should be devised to allocate origin to one of the participating countries.

Experience under the European Union scheme has shown that the rules on the allocation of origin among members of the same regional grouping may have direct implications for LDC members, especially in the Asian region. As mentioned above, LDC countries are granted duty free entry on textile and clothing products under the European Union scheme. In addition, some major exporters have been graduated out of the scheme for these products. There is therefore a strong incentive to move and relocate manufacturing facilities from the excluded more developed member countries to the LDC members of ASEAN and SAARC to better exploit available preferential market access conditions and cumulation.

However, even when cumulation is applied, there are specific conditions under which origin could be finally allocated to the exporting LDC member. In particular, article 72a of the European Community Customs Code states that origin is conferred to the exporting LDC beneficiary only if the value-added there is greater than the highest customs value of the inputs originating in any other regional partners. Experience has shown, during technical cooperation activities conducted by UNCTAD experts, that in the case of the Lao People's Democratic Republic and Cambodia, this rule implied that origin of finished garments had to be referred back to the supplier of intermediate materials, namely Thailand. Since Thailand was and still is excluded from GSP preferences in the apparel sector, the exported garments from the Lao People's Democratic Republic and Cambodia could not be granted GSP treatment. This situation was later acknowledged by a change in the European Union legislation, providing derogation from the rules of origin in the textile and clothing sector.

As mentioned above, the distinction between full and partial cumulative origin has important economic effects on the functioning and utilization of trade preferences. An important implication for LDCs, derived from the implementation of the EBA amendment to the European Union GSP scheme, is linked to the different cumulation systems available under the GSP and under the CPA. It is obvious that if an ACP LDC desires to take advantage of the EBA duty and quota-free treatment, it will have to do so as a GSP beneficiary thus losing the opportunity of fully cumulating with its ACP partners, an opportunity that is only available as a party to the Cotonou Agreement. On the other hand, if an ACP LDC desires to take advantage of the more favourable CPA cumulation system, it will have to face the Cotonou customs duties and quantitative limitations where applicable.

Finally, as amply described above, while cumulation may be considered a liberalizing principle, there is no substitute, if substantial changes and innovations have to be introduced in the field of rules of origin, for changing the product-specific origin requirements. The complex technicalities and paperwork required by the various forms of cumulation represent a burden for exporters, producers and certifying authorities. Experience has shown that in some cases cumulation, both at the regional and bilateral level, may only be theoretical, since it cannot be applied in practice. If a certain input is simply not manufactured in the region or in any LDC, cumulation does not address the real problem, e.g. a change in the product-specific origin requirements.

3.3.2 Derogations and special provisions for LDCs in the field of rules of origin

Some preference-giving countries have introduced special provisions for LDC beneficiaries, such as derogations from product-specific rules of origin or higher percentages of maximum import content allowance.

Statutory provisions on the possibility of granting derogations from the rules of origin are contained in the European Union GSP,⁵⁹ in favor of LDC beneficiaries only, while in the Lomé⁶⁰ and Cotonou⁶¹ agreements, for all beneficiaries. These provisions lay down procedures and requirements to ensure that specific concession is justified by the development of existing industries or the creation of new industries in the beneficiary countries. Several derogations have been granted in the context of the previous Lomé Convention and the current Cotonou Agreement.⁶²

In the last 4 years, in the context of the provisions on derogation under the GSP scheme, the European Union has granted selected Asian LDCs derogation from rules of origin in the textile and clothing sector. The practical effects of such derogation are (1) to enlarge the geographical scope of application of the cumulation (see below for further details on the concept of cumulation); (2) to allow such LDCs to start the manufacture from imported fabrics originating in an ASEAN, SAARC or ACP country; and (3) most importantly, to waive the application of the rule on the allocation of origin (as explained above in 3.3.1) and thus, to retain the origin of the exported product.

As earlier mentioned, the EU has granted Cambodia, the Lao People's Democratic Republic and Nepal a derogation from the rules of origin. Such derogation, other than addressing points (1) and (2) above, has waived the application of the value-added rule in the allocation of the origin among regional partners (article 72a ECCO). Under the normal cumulative origin rules, the Lao People's Democratic Republic, for instance, could only partially cumulate with its ASEAN counterparts and in order to retain the origin had to carry out making-up operations that resulted in substantial value-added.

The derogation granted to these LDCs still suffers from certain limitations. First of all, the derogation is subject to annual quantitative limitations. Secondly, it is subject to annual renewal. Thirdly, even though extended in terms of geographical coverage, the cumulation system applicable under the derogation is still a partial one. The three LDCs may import woven fabric or yarn from ACP, ASEAN or SAARC countries, but such woven fabric or yarn must already be originating in those countries.

⁵⁹ See article 76 of the European Community Customs Code, Commission Regulation (EC) No 1602/2000 of 24 July 2000 amending Regulation (EEC) No 2454/93 laying down provisions for the implementation of Council Regulation (EEC) No 2913/92 establishing the Community Customs Code (OJ L 188, 26.7.2000)

⁶⁰ See article 31 of Protocol 1 concerning the definition of the concept of "originating products" and methods of administrative cooperation, to the Lomé IV Convention, as revised by the agreement signed in Mauritius on 4 November 1995.

⁶¹ See article 38 of Protocol 1 concerning the definition of the concept of "originating products" and methods of administrative cooperation, to the ACP-European Union Partnership Agreement, signed in Cotonou on 23 June 2000.

⁶² For an example of derogation on textile and clothing under the previous Lomé Convention, see Decision No. 1/93 of the ACP-EEC Customs Cooperation Committee, of 16 April 1993, derogating from the definition of the concept of 'originating products' to take account of the special situation of Lesotho with regard to its production of certain garments (OJ L. 123, p. 32). For an example of derogation for canned tuna under the Cotonou Agreement, see Decision No. 1/2000 of the ACP-EC Customs Cooperation Committee of 18 October 2000, derogating from the definition of "originating products" to take account of the special situation of Fiji, Mauritius, Papua New Guinea and the Seychelles regarding the production of canned tuna and of tuna loins (HS heading ex 16.04)(OJ 276, p. 89).

3.3.3 Conclusions

Preference-giving countries have in some instances recognized that rules of origin may be restrictive. However, rather than introducing the necessary changes in the product-specific requirements, they have often introduced an element of liberalization by enlarging the scope of the “cumulation” of origin, often taking into account the regional trade initiatives taking place among beneficiary countries.

Besides the case of textiles and clothing products, there are other areas where rules of origin remain an obstacle to the better utilization of trade preferences. Raw agricultural products grown and harvested in one country normally do not encounter or experience any origin problems provided they are accompanied by the necessary administrative and documentary evidence. Other relevant examples of products that are affected by the application of strict rules of origin may be drawn from the case of agricultural products like fish, processed agricultural products and foodstuffs, where LDCs may have a comparative advantage and MFN tariff peaks are concentrated. As mentioned previously, substantive rules of origin requirements, that do not match the industrial capacity of LDCs and reflecting a vertical view of the production stages of the food industry, are still required under the European Union and Japanese GSP rules. The high percentages and method of calculations required by the rules of origin under the GSP schemes of the United States and Canada demonstrate that they have a substantial impact on the utilization of trade preferences.

Intergovernmental debates and discussion on improvements and harmonization of preferential rules of origin contained in unilateral preferences have yet to result in a pragmatic approach. The common declaration of non-preferential rules of origin contained in the WTO agreement on rules of origin did not bring any substantial progress or discipline in this area.

Since the outset of the GSP rules of origin, historical inertia and the difference in product coverage among the various schemes were the reasons for the lack of progress recorded by the international community in this area.

In the post Uruguay Round era and bearing in mind the progress registered by the WTO Agreement on Rules of Origin, the conclusions of the last UNCTAD intergovernmental group of experts on rules of origin provided a workable way forward toward a common set of preferential rules of origin for unilateral trade preferences. The conclusions indicated that harmonization of GSP rules of origin could be conducted on the basis of the work carried out by the WCO under the harmonization work programme of the non-preferential rules of origin. While the WCO Technical Committee on Rules of Origin in Brussels has completed most of its technical work, the conclusion of the harmonization work programme is currently impeded by lack of agreement. During the negotiations conducted in the WCO Committee, the international community has been able to give a fresh and highly technical consideration to the whole issue of origin. A number of technical innovations to old problems have been found, new production methods have been taken into account during the process. This wealth of experience and achievements should provide the substantial technical background for progressing toward a harmonized and updated set of preferential rules of origin to be applied in the context of the initiative for duty and quota free market access in favour of LDCs.⁶³ Annex II contains some possible options for harmonized rules of origin for apparel products. Other options for harmonized rules of origin may be elaborated in areas of export interest to LDCs. A forthcoming UNCTAD publication will further examine this aspect.

⁶³ Some of the product specific rules of origin proposed for consideration in the Annexes of this paper draw from the results of these negotiations.

3.4. Addressing problem 4: Lack of understanding negotiations or awareness of the preferences available and the conditions attached therein

After more than three decades of operation of the GSP schemes and other preferential trading arrangements, the following conclusion may be drawn: the underutilization of trade preferences derive from the intrinsic nature of any trade instrument, which assumes a certain amount of institutional capacity and human and financial resources capable to efficiently administer it.

Like many other trade instruments of commercial policy, trade preferences need to be operated by an efficient and rent-effective administration in order to generate the expected aim or trade policy objectives pursued. Moreover, trade instruments should be placed in a regulatory framework that create conditions of stability and predictability, justifying the establishment and the costs of such administrative machinery. For instance, anti-dumping laws, textile quotas regulations and the administration of these trade laws rely on the existence of an organized business community able to represent their interest, file a complaint which justify the existence of a corresponding administration able to process the complaints and conduct the investigations. This machinery is expected to generate a return of economic benefits to the various stakeholders. Trade preferences also need a similar virtuous circle to be fully utilized, as well as an efficient administration and an active participation of the private sector.

The GSP schemes and other preferences do not possess the features such as stability, predictability and perhaps more important the rentability of other trade instruments to justify budget allocations by a beneficiary Government or sufficient resources to administer them. In the past, only a handful of advanced GSP beneficiaries were able to establish the sufficient infrastructure to exploit and manage trade preferences. During the mid-eighties, certain beneficiaries were able to establish the one-stop procedure for the issuance and monitoring of GSP trade when an operation to conduct a GSP transaction could be performed in a single office. Other extremely advanced beneficiaries were able to efficiently control and monitor the intake of GSP benefits and the shipments of textile exports submitted to quotas through a registration system of companies involved in frequent GSP trade. This simplified procedure allowed for a substantial reduction of paperwork and costs involved in a common GSP transaction.

In brief, these trade facilitation procedures anticipated to a certain extent the concept of trade efficiency. Even in these limited cases, other factors concurred to the need and justification of these infrastructural and simplified procedures such as the presence of a consolidated volume of GSP trade and a workable export supply capacity of GSP-covered products which, on his turn, generated the demand and pressure for these services by the business community.

In spite of its conceptual simplicity, the utilization and the administration of preferential trading opportunities require an in-depth knowledge of the basic trade principles and instruments. Product coverage and preferential tariffs are contained in specific lists, classified according to the national tariff lines of the preference-giving country. These tariff lines are based on the Harmonized System further subdivided at 8 or 10 digit level with detailed product description. Different product coverage changing from scheme to scheme and periodically modified within each GSP scheme requires that the GSP user should become acquainted with the national tariff system of every preference-giving country.

This factor is further exacerbated in the case of sensitive products such as agricultural, where marketing timetables or seasonal variations generate subdivisions in the tariff structure of preference-giving countries. In these cases, the GSP user should be able to identify the correct tariff classification corresponding to the off-season period when GSP benefits are usually granted. In some situations it may become difficult, in the absence of adequate advice from custom classification experts, to ascertain in advance if a specific product is covered by the GSP and what the preference margin available is. Therefore, the utilization of the benefits provided by the GSP requires an intensive monitoring of the changes of the national customs classification systems and the different schemes provided by the preference-giving countries. Although this situation is, to a certain extent, unavoidable, the cost of this exercise may partly or totally absorb the benefits to be gained from the tariff preferences. Ultimately, it may place the importers in preference-giving countries in a more advantageous position when the revenues arising from the preference margins have to be shared. Moreover, it creates a substantial disincentive for businessmen and newcomers, which in the absence of an administration capable to assist them, are confronted with relatively high costs to enter into a GSP transaction. If one adds to this the requirements and the administrative paperwork to comply with rules of origin, the trade effects of preferences may easily be obliterated or seriously reduced.

The enhancement of the utilization of trade preferences by LDCs may be pursued through technical assistance activities aimed at providing information services and training courses to local producers and exporters, strengthening human resources and institutional capacities to comply with administrative and customs procedures under the different GSP schemes and preferential arrangements and establishing a network of cooperating institutions.

The UNCTAD Technical Cooperation Project on Market Access, Trade Laws and Preferences has been carrying out many of these activities over the last years. Handbooks on GSP schemes and other national trade laws are regularly updated and available on the Internet (www.unctad.org/gsp), CD-ROMs, etc. Current technical assistance has two main objectives :

1. To increase the utilization of trade opportunities and trade preferences available for developing countries under preferential arrangements like the GSP, CPA and other bilateral agreements, through a better understanding and familiarization of the interested parties (either Government officials or the business community) of the current market access possibilities in the main industrialized markets.
2. To increase the understanding in developing countries of trade laws and regulations such as rules of origin, quotas, anti-dumping duties, sanitary and phyto-sanitary (SPS) measures and technical barriers to trade (TBT), governing the market access conditions in the main preference-giving countries. Under this programme of technical assistance, various workshops on market access and advisory missions have been carried out. Substantive backstopping of the network of focal points and other trade promotion organizations existing in beneficiaries countries has also been carried out by regularly distributing updated materials on GSP and other preferential regimes as well as maintaining a depository of the certifying authorities of the certificate of origin. The expertise acquired under these programmes could be drawn upon to provide technical assistance to LDCs to help ensure the full utilization of duty free treatment.

CONCLUSIONS

This paper has examined steps to be taken to improve market access in the area of preferential tariffs and rules of origin. Obviously market access is not limited to these aspects but encompasses other trade instruments such as SPS, TBT, anti-dumping, countervailing duties and safeguard measures which are not specifically dealt with by this study. While more research in these areas should be carried out, Annex III contains a suggestion for a WTO instrument addressing the issues related to market access on tariffs and origin that could impart the necessary stability and predictability to make the current initiative in favour of LDCs truly effective. This instrument might also include other aspects of market access beyond tariff and origin by making reference to the specific proposals raised by developing countries during the preparation for Seattle and the current process leading to the fourth WTO Ministerial Conference to be held in Qatar, November 2001.

During discussion and debates which may be held on the current initiatives, it has to be recalled that, in order to be an effective tool aimed at improving LDC participation in international trade, the following basic conditions have to be met:

- 1) **Ensure security of the preferential treatment granted**, e.g. to establish a commitment that provides contractual status to duty-free preferences through the negotiation of a new legal instrument imparting stability and predictability to the new initiative and assuring the maximum of security for the duty free access so provided. Any temporary withdrawal of duty free treatment would be subject to the disciplines of the relevant WTO Agreements, which would be improved to provide meaningful special and differential treatment (S&D) for LDCs.
- 2) **Duty-free treatment should be provided to all products**; any temporary exceptions could provide for duty-free tariff quotas, which would be subject to an agreed phase-out programme.
- 3) **Rules of origin requirements should be realistic matching the industrial capacity of LDCs; in order to ensure the effective and full utilization of preferences, product-specific rules of origin should be simplified and harmonized among donor countries. Simplified customs documentation and procedures should also be adopted.** This process of simplification and harmonization of rules of origin should draw upon the work carried by WCO and UNCTAD in this field.
- 4) **To devise ways and means to ensure that the duty free access is not frustrated by non-tariff measures:** the existing S&D treatment provided under the WTO Agreements should be improved in this respect.

ANNEX I: Tables on Utilization Rates

CANADA: GSP IMPORTS AND UTILIZATION FOR LDCs (by HS section, 1998)

HS Section	Section Description	Value of Imports from LDCs				Market Share (%)	Potential Coverage Rate (%) = 4 / 3	Utilization Rate (%) = 6 / 5	Utility Rate (%) = 6 / 4

ANNEX II: Examples of proposed harmonized rules of origin for HS Chapters 61 - 62

A possible solution for a new concept of preferential rules of origin in the clothing sector:

Description of product	Proposed rules
Chapter 61 Articles of apparel and clothing accessories, knitted or crocheted, obtained by sewing together or otherwise assembling, two or more pieces or knitted or crocheted fabric which have been either cut to form or obtained directly to form	Complete making up Or (CUT TO FORM) Laying out and cutting of uncut fabric; assembly of cut components by stitching or other appropriate methods; necessary finishing, including addition of trim and other findings, washing and pressing etc.; and packaging of finished items; Or (KNIT DIRECTLY TO FORM) Knitting of shaped components from single yarn, looping and lining of components necessary finishing, including addition of trim and other findings, washing and pressing etc.; and packaging of finished items
Ex Chapter 62 Articles of apparel and clothing accessories, not knitted or crocheted: - finished or complete - unfinished or incomplete	Complete making up Or Laying out and cutting of uncut fabric; assembly of cut components by stitching or other appropriate methods; necessary finishing, including addition of trim and other findings, washing and pressing etc.; and packaging of finished items Manufacture from yarn

Note:

The term "complete making-up" used in the table above means that all the operations following cutting of the fabric or knitting or crocheting of the fabric directly to shape have to be performed.

However, making-up shall not necessarily be considered as incomplete where one or more finishing operations have not been carried out.

The following is a list of examples of finishing operations:

- Fitting buttons and/or other types of fastenings;
- Making of button-holes;
- Finishing off the ends of trouser legs and sleeves or the bottom hemming of skirts and dresses;
- Fitting of trimmings and accessories such as pockets, labels, badges, etc.;
- Ironing and other preparations of garments for sale "ready made".

ANNEX III: Proposed Legal Instrument

LDCs have continually insisted that the duty and quota-free treatment in their favour should be bound. Formally “binding” would entail an amendment of article I of GATT 1994 according to the procedure laid down in article X of the Marrakech Agreement.

However, a contractual status could be provided by the acceptance of a legal instrument based on a decision of the WTO Ministerial Conference under article IX of the WTO Agreement. Such decision could be adopted in the framework of the 1979 Enabling Clause that provides for the consideration, on an ad hoc basis, of any proposals for differential and more favourable treatment, under the GATT provisions for joint action.⁶⁴ Accordingly, a decision could be taken to draw up a legal instrument for acceptance by WTO members, with provision that non-members could also observe.

The essential elements of this instrument would be as follows:

- (I) A commitment by those members which accept the instrument to provide duty-free access to all imports from LDCs;
- (II) A “negative” list of tariff items temporarily excluded from duty-free treatment, submitted by each accepting member which considers that it cannot immediately grant such duty-free treatment to all products upon entry into force of the instrument (but would provide for duty-free tariff quotas). These lists will be reviewed annually to explore the possibilities for their reduction and eventual elimination;
- (III) A set of Annexes containing harmonized rules of origin for duty-free imports from LDCs, that would be accepted by the signatories to the instrument;
- (IV) A set of simplified customs procedures and documents to accompany shipments from LDCs;
- (V) An undertaking to support technical assistance by UNCTAD and other organizations in assisting LDCs to fully utilize these preferences.

In order to ensure and impart further stability to the duty free access the following actions could be undertaken by WTO members:

- (a) A detailed implementation plan of the provisions laid down in articles 9 and 10 of the Agreement on the Application of Sanitary and Phytosanitary Regulations, and articles 11 and 12 of the Agreement on Technical Barriers to Trade, to include more stringent obligations to provide technical assistance to LDCs;
- (b) A provision ensuring that duty-free treatment for LDC products could only be withdrawn temporarily, in accordance with the criteria of the Agreement on Safeguards, accompanied by an agreed interpretation of article 9.1 of the Agreement on Safeguards to raise the thresholds for imports from LDCs from 35 per cent to ... per cent. and exempting them from cumulation;
- (c) An agreed interpretation of article 5.8 of the Agreement on the Interpretation of Article VI of GATT 1994 to raise the threshold for the volume of imports from LDCs from 3 per cent to ... per cent., and exempting them from cumulation.
- (d) An agreed interpretation of paragraph 27.10 of the Agreement on Subsidies and Countervailing Measures to increase the threshold for imports from LDCs from 4 per cent to ... per cent and exempting them from cumulation.

⁶⁴ Decision of 28 November 1979, on “Differential and More Favourable Treatment, Reciprocity and Fuller Participation of Developing Countries”, L/4903, footnote 2.

ADDENDUM: Expansion of product coverage

Lists of tariff line items that are not currently covered by the GSP schemes of:

- **European Union** (Lomé/Cotonou treatment and pre-EBA GSP for LDCs)..... **46**
- **Canada**..... **88**
- **Japan**..... **116**
- **United States** (please note that of the more that 1800 tariff line items that have been declared GSP eligible for the benefit of all AGOA beneficiaries, LDCs and non-LDCs, the real improvement in product coverage for AGOA LDCs is made of only 214 tariff lines which were previously statutorily excluded from GSP treatment. Apparel products which have been granted special GSP treatment under AGOA still appear in the table because, to date, the only sub-Saharan African LDC that has complied with all the special apparel provisions required is Madagascar)..... **176**

EUROPEAN UNION: Preferential treatment applicable to agricultural products and foodstuffs originating in the ACP countries as compared with pre-EBA GSP treatment for LDCs (excluding Myanmar)

53110030	Woven fabrics of other vegetable textile fibers, containing cotton and manmade fibers, nesoi	3.1	
53110040	Woven fabrics of other vegetable textile fibers, nesoi	1.2	
54	MAN-MADE FILAMENTS		
54011000	Sewing thread of synthetic filaments, whether or not put up for retail sale	12.0	
54012000	Sewing thread of artificial filaments, whether or not put up for retail sale	12.0	
54021030	Single high tenacity yarn of nylon or polyamides, not put up for retail sale	9.3	
54021060	Multiple (folded) or cabled high tenacity yarn (except sewing thread) of nylon or other polyami	8.4	
54022030	Single high tenacity yarn of polyesters, not put up for retail sale	9.3	
54022060	Multiple (folded) or cabled high tenacity yarn (except sewing thread) of polyesters, not put up	8.1	
54023130	Single textured yarn, of nylon or other polyamides, measuring not more than 500 decitex, not pu	9.3	
54023160	Multiple or cabled textured yarn (except sewing thread), of polyamides, single yarn not more th	8.4	
54023230	Single textured yarn, of nylon or other polyamides, measuring more than 500 decitex, not put up	8.8	
54023260	Multiple or cabled textured yarn (except sewing thread), of polyamides, single yarn more than 5	8.4	
54023330	Single textured yarn of polyesters, not put up for retail sale	9.3	
54023360	Multiple or cabled textured yarn (except sewing thread), of polyesters, not put up for retail s	8.4	
54023930	Single textured yarn, nesoi, not put up for retail sale	9.3	
54023960	Multiple or cabled textured yarn (except sewing thread), nesoi, not put up for retail sale	8.4	
54024190	Syn filament yarn (not for doll wigs), of colored multifil, untwisted/with twist < 5 turns/mete	8.8	
54024200	Yarn of polyesters, partially oriented, single, untwisted or with a twist not exceeding 50 turn	9.3	
54024310	Single yarn, twist of 0-50 turns/m, wholly polyester, 75-80 decitex, 24	8.8	

Product Code (HS)	Description	MFN Applied Rate (% or specific)	AGOA
	filaments, nesoi, not p		
54024390	Single yarn, twist of 0-50 turns/m, other than wholly of polyester, nesoi, not put up for retail	8.8	
54024990	Other yarns, monofil; multifil, untwisted or twisted > or = to 5, not exceeding 50 turns per me	8.8	
54025100	Nylon or other polyamide yarns, single, with a twist exceeding 50 turns/m, not put up for retail	9.3	
54025210	Single yarn, twist exceeding 50 turns/m, wholly polyester, 75-80 decitex, 24 filaments, nesoi,	9.3	
54025290	Single yarn, twist exceeding 50 turns/m, other than wholly of polyester, nesoi, not put up for	9.3	
54025900	Yarn of synthetic filaments nesoi, single, twist exceeding 50 turns/m, not put up for retail sa	8.8	
54026100	Nylon or other polyamide yarn, multiple (folded) or cabled, (except sewing thread), not put up	8.1	
54026200	Polyester yarn, multiple (folded) or cabled, (except sewing thread), not put up for retail sale	8.1	
54026900	Yarn of synthetic filaments nesoi, multiple (folded) or cabled, (except sewing thread), not put	8.1	
54031030	Single high tenacity yarn of viscose rayon, not put up for retail sale	10.0	
54031060	Multiple (folded) or cabled high tenacity yarn of viscose rayon (except sewing thread), not put	9.1	
54032030	Single textured artificial filament yarn (other than sewing thread), not put up for retail sale	10.0	
54032060	Multiple (folded) or cabled textured artificial filament yarn (other than sewing thread), not p	9.1	
54033100	Single yarn of viscose rayon (not high ten. or sewing thread), untwisted or with a twist not ov	10.0	
54033200	Single yarn of viscose rayon (not high ten. or sewing thread), with twist exceeding 120 turns/m	10.0	
54033300	Single yarn of cellulose acetate (not high ten. or sewing thread), not put up for retail sale	9.3	
54033900	Artificial filament yarn nesoi, single, not put up for retail sale	8.8	
54034100	Viscose rayon yarn (except sewing thread), multiple (folded) or cabled, not put up for retail s	9.1	
54034200	Yarn of cellulose acetate (except sewing thread) multiple (folded) or cabled, not put up for re	8.4	
54034900	Artificial filament yarn (except sewing thread) nesoi, multiple (folded) or cabled, not put up	8.1	
54041080	Synthetic monofilament (exc. polypropylene), of 67 decitex or more and with no cross-sectional	7.3	

Product Code (HS)	Description	MFN Applied Rate (% or specific)	AGOA
54050030	Artificial monofilament of 67 decitex or more and of which no cross-sectional dimension exceeds	7.3	
54061000	Synthetic filament yarn (except sewing thread), put up for retail sale	9.7	
54062000	Artificial filament yarn (except sewing thread), put up for retail sale	9.7	
54071000	Woven fabrics obtained from high tenacity yarn of nylon or other polyamides or of polyesters	15.0	
54072000	Woven fabrics obtained from strip or the like of synthetic textile materials	6.8	
54073010	Woven fabrics specified in note 9 to section XI, of synthetic filament yarn, over 60 percent by	1.4	
54073090	Woven fabrics specified in note 9 to section XI, of synthetic filament yarn, nesoi	11.2
