

Fact sheet #4: Trade indicators

Map 1 | **Trade openness index, 2019**
(Percentage)

Note: This index measures the relative importance of international trade in goods relative to the domestic economic output of an economy. Exports are given equal weight to imports.

Concepts and definitions

This section presents different indices that can be used to analyze trade flows and trade patterns over time from the perspective of, for example, relative competitiveness, structure of global exports and imports markets, or the importance of trade for the economy, both for individual economies and for groups of economies.

For information on how the indices in this section are calculated, see UNCTAD Handbook of Statistics 2020, annex 6.3. The presented indices are a subset of the trade indices available on UNCTADstat (UNCTAD, 2020a).

How important is trade for economies?

In 2019, the economies most open to international trade, as measured by the ratio of the mean of exports and imports to GDP, were relatively small economies in South-Eastern Asia and Eastern Europe, including Hong Kong SAR, Singapore, Viet Nam, Slovakia, Hungary and Slovenia. By contrast, many developing economies in South America, Eastern Africa, except Djibouti, and Southern Asia, as well as some large developed economies, namely the United States of America and Japan, recorded ratios below 15 per cent.

How has the relative price of exports to imports developed?

The terms of trade of developing and transition economies decreased slightly in 2019. Landlocked developing countries (LLDCs) saw a decline of 5 per cent. In developed economies the indicator remained unchanged.

Figure 1 | **Terms of trade index**
(2015=100)

Note: This index indicates by how much the relative price between exports and imports has changed in relation to the base year.

How concentrated is global product supply?

Product groups differ in the degree to which global supply is concentrated among exporting economies. In 2019, the most unequally distributed or highly concentrated group, by far, was manufacturing, as indicated by a market concentration index of 0.20, as compared with index values between 0.11 and 0.15 recorded for the other product groups. The concentration index for food has been declining over the last 14 years. For fuels, over the last two years, a considerable increase in the concentration of world market supply was observed.

Figure 2 | Market concentration index of exports

Note: This index measures the extent to which a high proportion of exports are delivered by a small number of economies. It has a value of 1 if all exports originate from a single economy.

How have trade volumes changed?

The volume of world merchandise exports remained almost unchanged between 2018 and 2019. This stagnation can be observed in the exports of all groups of countries classified by development status. On the import side, however, corresponding to the developments of imports in value (see UNCTAD Handbook of Statistics 2020, section 1.1), a considerable increase (+7.2 per cent) was observed exclusively in transition economies. This marks the continuation of a phase of strong import growth in transition economies which began in 2016 and, within three years, led to an increase of their import volumes to 128 per cent of their 2015 level, while their export volumes reached only 110 per cent of their level of 2015.

Figure 3 | Volume index of exports and imports (2015=100)

Note: This index indicates the change in exports or imports, adjusted for the movement of prices, relative to the base year.

For references, see UNCTAD Handbook of Statistics 2020, annex 6.4.

Hong Kong SAR ranks **highest** in trade-openness;

Zimbabwe is placed at the **bottom**

LLDCs' terms of trade fell by 5% in 2019

Global supply of manufacturing **less dispersed**

than of other types of products

Volumes in global merchandise trade **stagnating** in 2019

Table 1 Selected trade indices by group of economies
(2015=100)

Developing economies

Year	Volume ^a		Purchasing power of exports ^b	Terms of trade ^c
	Imports	Exports		
2009	73	69	71	97
2014	100	100	100	100
2018	110	111	110	100
2019	110	110	109	99

Developing economies: Africa

Year	Volume ^a		Purchasing power of exports ^b	Terms of trade ^c
	Imports	Exports		
2009	106	73	98	93
2014	108	100	124	115
2018	104	97	115	111
2019	106	100	114	108

^a See note, figure 3 above.

^b This index indicates the change in exports, valued in prices of imports, relative to the base year.

^c See note, figure 1 above.

Developing economies: America

Year	Volume ^a		Purchasing power of exports ^b	Terms of trade ^c
	Imports	Exports		
2009	78	71	81	103
2014	95	104	109	115
2018	107	105	113	106
2019	106	102	112	106

Developing economies: Asia and Oceania

Year	Volume ^a		Purchasing power of exports ^b	Terms of trade ^c
	Imports	Exports		
2009	70	68	68	97
2014	101	99	97	97
2018	111	114	109	98
2019	111	112	108	98

^a See note, figure 3 above.

^b This index indicates the change in exports, valued in prices of imports, relative to the base year.

^c See note, figure 1 above.

Transition economies

Year	Volume ^a		Purchasing power of exports ^b	Terms of trade ^c
	Imports	Exports		
2009	90	98	90	100
2014	100	126	127	127
2018	110	119	119	108
2019	110	128	118	107

Developed economies

Year	Volume ^a		Purchasing power of exports ^b	Terms of trade ^c
	Imports	Exports		
2009	79	81	81	102
2014	98	96	97	99
2018	107	108	107	101
2019	106	108	108	101

^a See note, figure 3 above.

^b This index indicates the change in exports, valued in prices of imports, relative to the base year.

^c See note, figure 1 above.

Table 2 Selected trade indices, landlocked developing countries
(2015=100)

Economy	Volume ^a				Purchasing power of exports ^b		Terms of trade ^c	
	Imports		Exports		2014	2019	2014	2019
	2014	2019	2014	2019				
Afghanistan	95	154	90	93	90	167	94	108
Armenia	91	158	119	169	89	176	98	112
