The great divides between countries remain, with developed countries such as the United States, and in Europe, within-country inequality has increased not only in some less developed countries such as Sub-Saharan Africa, but also in Europe. Inequality between countries has not declined much, and there are also large disparities in wealth.

Wealth is highly concentrated, and the top 1% of the world population owns 45% of the world’s wealth. There is a huge gap between the world’s richest and poorest. The average per capita income of the poorest 20% of the world’s population is just 6% of the average per capita income of the richest 20%. The rich are getting richer, and the poor are getting poorer.

The average per capita income of the poorest 20% of the world’s population is just 6% of the average per capita income of the richest 20%. The rich are getting richer, and the poor are getting poorer.

The basic requirements are effective national governance to guide technological change, international cooperation for strengthening a technological ecosystem, and a human-centered approach to ensuring that the benefits reach everyone.

Policymakers should direct technological change towards meeting macroeconomic, social and environmental challenges and ensuring that all benefit from it. The task for governments is to maximize the potential of technology adoption and implementation while mitigating its drawbacks. Policymakers should ensure that technology advances are applied to solve pressing development challenges.

States should work closely with stakeholders, including civil society, the private sector, academia, and the media, to promote inclusive debate and prevent the emergence of social and economic disparities. Dialogue with stakeholders is needed to engage them in the process of technological change, and to identify the policies and measures that will help achieve shared development goals.

States should safeguard the right to access to information and to freedom of expression, as well as the right to privacy, so that citizens can make informed decisions. Over the past 30 years, global income inequality has increased to the point where the average income of the richest 1% of the world’s population is now 28 times that of the average income of the poorest 1%.

States should also ensure that citizens are informed about the benefits of technology advances, so that they can make informed decisions. States should also ensure that citizens have access to information and services, so that they can make informed decisions. States should also ensure that citizens have access to information and services, so that they can make informed decisions.
